[Rückstand aus der Destillation von dephenolisiertem und dealkyliertem Methylnaphthalinöl (aus bituminösem Kohleteer und pyrolyseolien) mit einem Siedebereich von 240 °C bis 260 °C. Besteht vorwiegend aus substituierten dinuklearen aromatischen und heterocyclischen Kohlenwasserstoffen]
- EL** έλαια εκχύλισης (άνθρακα), λιθανθρακόπισσας υπολειμματικά έλαια πυρόλυσης, ναφθαλινέλαια, υπολειμματικά αποστάξης **Επαναποστάγμα**  
[Υπολείμμα από την απόσταξη επαλλαγμένου από φαινόλες και βάσεις μεθυλωναφθαλινέλαιου (από βιτωμινώδη πίσσα, και υπολειμματικά έλαια πυρόλυσης) με περιοχή βρασμού από 240 °C ως 260 °C. Αποτελούνται κυρίως από υποκατεστημένους αρωματικούς και ετεροκυκλικούς υδρογονάνθρακες]
- EN** Extract oils (coal), coal tar residual pyrolysis oils, naphthalene oil, distn. residues, **Redistillates**  
[Residue from the distillation of dephenolized and debased methylnaphthalene oil (from bituminous coal tar and pyrolysis residual oils) with a boiling range of 240 °C to 260 °C (464 °F to 500 °F). Composed primarily of substituted dinuclear aromatic and heterocyclic hydrocarbons]
- FR** huiles d'extraction (charbon), huiles résiduelles de pyrolyse de goudron de houille, huile de naphthalène, résidus de distillation, **Fractions secondaires**  
[Résidu obtenu par distillation d'huile de methylnaphthalène débasée et déphénolée (des huiles résiduelles de pyrolyse de goudron de houille bitumineux) dont le point d'ébullition se situe approximativement entre 240 °C et 260 °C. Se compose principalement d'hydrocarbures aromatiques bicycliques et hétérocycliques substitués]
- IT** olii estratti (carbone), olii residui di pirólisi di catrame di carbone, olio di naftalene, residui della distillazione, **Redistillati**  
[Residuo proveniente dalla distillazione di olio metilnaftalenico privo di fenoli e basi (proveniente da carbone bituminoso e olii residui di pirólisi) con intervallo d'ebollizione 240 °C-260 °C. Composto prevalentemente da idrocarburi aromatici biciclici ed eterociclici sostituiti]
- NI** extractie olien (kool), koolteer en pyrolyse residuolien, naftaleenolie, destillatieresiduen, **Geherdestilleerde fracties**  
[Residu van de destillatie van, van fenolen en basen ontdane, methylnaftaleenolie (afkomstig uit bitumineuze koolteer en pyrolyse residuolien) met een kooktraject van 240 °C tot 260 °C. Voornamelijk samengesteld uit gesubstitueerde dinucleaire aromatische en heterocyclische koolwaterstoffen]
- PT** óleos de extração (carvão), alcatrão de carvão e óleos residuais de pirólise, óleo de naftaleno, resíduos da destilação, **Redestilados**  
[Resíduos da destilação de óleo de metilnaftaleno (de alcatrão de carvão betuminoso e óleos residuais de pirólise) desfenolizado e desbasificado, com um intervalo de destilação de 240 °C a 260 °C. É constituído principalmente por hidrocarbonetos aromáticos dinucleares substituídos e heterocíclicos]

[Destillatet fra stenkultstjære med et omtrentligt destillationsinterval fra 100 °C til 450 °C. Sammensat primært af aromatiske carbonhydrider, bestående af to- til fireledede kondenserede ringe, phenolforbindelser og aromatiske nitrogenbaser.]
- DE: Destillate (Kohlenteer); schweres Anthracenöl (Anthracenöl II)  
[Destillat aus Kohlenteer mit einem ungefähren Destillationsbereich von 100 °C bis 450 °C. Besteht in erster Linie aus zwei- bis viergliedrigen kondensierten ringaromatischen Kohlenwasserstoffen, phenolhaltigen Verbindungen und aromatischen Stickstoffbasen.]
- EL: αποστάγματα (λιθανθρακόπισσα) βαρέα έλαια ανθρακενίου  
[Το απόσταγμα από λιθανθρακόπισσα με περιοχή απόσταξης από 100 °C ως 450 °C περίπου. Αποτελείται πρωτίστως από αρωματικούς υδρογονάνθρακες με διμελείς ως συμπτυκνυμένους δακτύλιους, φαινολικές ενώσεις και αρωματικές αζωτούχες βάσεις.]
- EN: Distillates (coal tar); Heavy Anthracene Oil  
[The distillate from coal tar having an approximate distillation range of 100 °C to 450 °C (212 °F to 842 °F). Composed primarily of two to four membered condensed ring aromatic hydrocarbons, phenolic compounds, and aromatic nitrogen bases.]
- FR: distillats de goudron de houille; Huile anthracénique lourde  
[Distillat issu du goudron de houille dont l'intervalle d'ébullition s'étage approximativement de 100 °C à 450 °C. Se compose principalement d'hydrocarbures aromatiques à noyaux condensés comportant de deux à quatre cycles, de composés phénoliques et de bases aromatiques azotées.]
- IT: distillati (catrame di carbone); Olio di antracene II  
[Distillato di catrame di carbone con punto di distillazione nell'intervallo 100 °C-450 °C ca. È composto principalmente da idrocarburi a nuclei aromatici condensati di 2-4 elementi, composti fenolici e basi azotate aromatiche.]
- NL: destillaten (koolteer); Zware anthraceen olie  
[Het destillaat van koolteer met een destillatietraject van ongeveer 100 °C tot 450 °C. Voornamelijk samengesteld uit aromatische koolwaterstoffen met twee- tot viervoudig condenseerde ringen, fenolhoudende verbindingen en aromatische stikstofbasen.]
- PT: destilados (alcatrão de carvão); óleo antracénico pesado  
[O destilado de alcatrão de carvão com um intervalo de destilação de aproximadamente 100 °C a 450 °C. É constituído principalmente por hidrocarbonetos aromáticos polinucleares com dois a quatro membros, compostos fenólicos, e bases azotadas aromáticas.]

NOTA H

NOTA M

- ES: alquitrán, hulla, elevada temperatura, gran proporción de sólidos; Residuos sólidos de alquitrán (carbonilla)  
[Producto de condensación obtenido por enfriamiento, aproximadamente hasta temperatura ambiente, del gas desprendido en la destilación destructiva de hulla a elevada temperatura (superior a 700 °C). Compuesto principalmente de una mezcla compleja de hidrocarburos aromáticos con anillos condensados con un elevado contenido de materiales sólidos de hulla y de tipo coque.]
- DA: tjære, stenkuls-, højtemperatur, højt indhold af faste stoffer; Kultjæresediment  
[Kondensationsproduktet opnået ved køling, omtrent til omgivende temperatur, af gassen udviklet ved højtemperaturstørdestillationen (højere end 700 °C) af kul. Består primært af en sammensat blanding af kondenserede aromatiske carbonhydrider med et højt faststof indhold af kul-og koks-lignende materialer.]
- DE: Teer, Kohle-, Hochtemperatur, hohe Feststoffanteile; Steinkohlenteerrückstand, fest  
[Kondensationsprodukt, erhalten durch Kühlen, auf etwa Umgebungstemperatur, des bei der Hochtemperatur-Entgasung (größer als 700 °C) von Kohle sich entwickelnden Gases. Besteht in erster Linie aus einem komplexen Gemisch aromatischer Kohlenwasserstoffe mit kondensierten Ringen mit hohem festen Bestandteil an Kohle- und Koks-ähnlichen Stoffen.]
- EL: πίσσα ανθρακα, υψηλής θερμοκρασίας, υψηλής περιεκτικότητας σε στερεά· Υπόλειμμα στερεών λιθανθρακόπισσας  
[Το προϊόν συμπύκνωσης που λαμβάνεται με ψύξη, περίπου σε θερμοκρασία περιβάλλοντος, του αερίου που εκλύεται κατά την ξηρή απόσταξη άνθρακα σε υψηλή θερμοκρασία (πάνω από 700 °C). Συνίσταται κυρίως από πολύπλοκο μείγμα αρωματικών υδρογονανθράκων με συμπυκνωμένους δακτυλίους και με υψηλή περιεκτικότητα σε στερεές ύλες τύπου άνθρακα και κοκ.]
- EN: Tar, coal, high-temp., high-solids; Coal Tar Solids Residue  
[The condensation product obtained by cooling, to approximately ambient temperature, the gas evolved in the high temperature (greater than 700 °C (1 292 °F)) destructive distillation of coal. Composed primarily of a complex mixture of condensed ring aromatic hydrocarbons with a high solid content of coal-type materials.]
- FR: goudron de houille à haute température, à haute teneur en matières solides; Résidus solides de goudron de charbon  
[Produit de condensation obtenu par refroidissement, à température ambiante, du gaz dégagé par la distillation destructive de la houille à haute température (au-dessus de 700 °C). Se compose principalement d'un mélange complexe d'hydrocarbures aromatiques à noyaux condensés et d'une quantité élevée de matières solides du type de la houille et du coke.]
- IT: catrame, carbone, alta temperatura, alto contenuto in solidi; Residui solidi di catrame di carbone fossile  
[Prodotto di condensazione ottenuto raffreddando, circa a temperatura ambiente, il gas che si sviluppa nella distillazione distruttiva del carbone ad alta temperatura (superiore a 700 °C). È costituito principalmente da una miscela complessa di idrocarburi aromatici ad anelli condensati con un alto contenuto in sostanze solide tipo carbone e coke.]
- NL: teer, kool-, hoge temperatuur, hoge gehaltes aan vaste stof; Steenkoolteer, vaste bestanddelen  
[Het condensatieproduct dat wordt verkregen door koelen, tot ongeveer omgevingstemperatuur, van het gas dat vrijkomt bij de destructieve destillatie bij hoge temperatuur (boven 700 °C) van kool. Voornamelijk samengesteld uit een complex mengsel van aromatische koolwaterstoffen met gecondenseerde ringen en heeft een hoog gehalte aan vaste kool- en cokesachtige materialen.]
- PT: alcatrão, carvão, de temperatura elevada, teor elevado em sólidos; Resíduos sólidos de alcatrão de hulha  
[O produto de condensação obtido arrefecendo, até próximo da temperatura ambiente, o gás libertado na destilação destrutiva do carvão a temperatura elevada (superior a 700 °C). É constituído principalmente por uma mistura complexa de hidrocarbonetos aromáticos polinucleares com teor elevado em sólidos do tipo do carvão e do coque.]

## NOTA H

- ES alquitrán, hulla, elevada temperatura ; Alquitrán  
[Producto de condensación obtenido por enfriamiento, aproximadamente a temperatura ambiente, del gas desprendido en la destrucción destructiva de hulla a elevada temperatura (mayor de 700 °C). Líquido negro viscoso más denso que el agua. Compuesto principalmente de una mezcla compleja de hidrocarburos aromáticos con anillos condensados. Puede contener cantidades minoritarias de compuestos fenólicos y bases nitrogenadas aromáticas.]
- DA : tjære, stenkuls-, højtemperaturs- ; Stenkulstjære  
[Kondensationsproduktet opnået ved at nedkøle, til omtrent omgivelsestemperatur, den gas, der udvikles ved tørdestillation af kul ved høj temperatur (højere end 700 °C). En sort, viskøs væske tungere end vand. Består primært af en sammensat blanding af kondenserede aromatiske carbonyldrider. Kan indeholde mindre mængder phenolforbindelser og aromatiske nitrogenbaser.]
- DE : Teer, Kohlen-, Hochtemperatur- ; Kohlenteer  
[Das Kondensationsprodukt, das durch \*Kühlen, auf etwa Umgebungstemperatur, des bei der Hochtemperatur-(größer als 700 °C)-Entgasung von Kohle anfällt. Es ist eine schwarze viskose Flüssigkeit dichter als Wasser. Besteht in erster Linie aus einer komplexen Mischung von aromatischen Kohlenwasserstoffen mit kondensierten Ringen. Kann geringe Mengen phenolhaltiger Verbindungen und aromatischer Stickstoffbasen enthalten.]
- EL : πίσσα, άνθρακα, υψηλής θερμοκρασίας· Ανθρακόπισσα  
[Το προϊόν συμπύκνωσης που λαμβάνεται με ψύξη περίπου σε θερμοκρασία περιβάλλοντος του αερίου, το οποίο εκλύεται κατά την ξηρά απόσταξη άνθρακα σε υψηλή θερμοκρασία (πάνω από 700 °C). Μαύρο, παχύρευστο υγρό, πυκνότερο από το νερό. Αποτελείται κυρίως από πολύπλοκο μείγμα αρωματικών υδρογονανθράκων με συμπυκνωμένους πυρήνες. Μπορεί να περιέχει μικρότερες ποσότητες φαινολικών ενώσεων και αρωματικών αζωτούχων βάσεων.]
- EN : Tar, coal, high-temp. , Coal tar  
[The condensation product obtained by cooling, to approximately ambient temperature, the gas evolved in the high temperature (greater than 700 °C (1 292 °F)) destructive distillation of coal. A black viscous liquid denser than water. Composed primarily of a complex mixture of condensed ring aromatic hydrocarbons. May contain minor amounts of phenolic compounds and aromatic nitrogen bases.]
- FR : goudron de houille à haute température (charbon) ; Goudron de houille  
[Produit de condensation obtenu par refroidissement, jusqu'à la température ambiante, du gaz généré par la distillation destructive du charbon à haute température (au-dessus de 700 °C). Liquide visqueux de couleur noire, plus dense que l'eau. Se compose principalement d'un mélange complexe d'hydrocarbures aromatiques à noyaux condensés. Peut contenir de petites quantités de composés phénoliques et de bases aromatiques azotées.]
- IT : catrame, carbone, alta temperatura ; Catrame di carbone  
[Prodotto di condensazione ottenuto mediante raffreddamento, all'incirca a temperatura ambiente, del gas sviluppato nella distruzione distruttiva ad alta temperatura (superiore a 700 °C) del carbone. È un liquido nero vischioso, più denso dell'acqua. È costituito principalmente da una miscela complessa di idrocarburi aromatici a nuclei condensati. Può contenere piccole quantità di composti fenolici e di basi azotate aromatiche.]
- NL : teer, kool, hoge temperatuur ; Koolteer  
[Het condensatieproduct dat wordt verkregen door afkoeling tot ongeveer omgevingstemperatuur van het gas dat vrijkomt bij de destructieve destillatie van kool bij hoge temperatuur (hoger dan 700 °C). Een zwarte viskeuze vloeistof met een dichtheid groter dan water. Voornamelijk samengesteld uit een complex mengsel van aromatische koolwaterstoffen met gecondenseerde ringen. Kan ondergeschikte hoeveelheden fenolhoudende verbindingen en aromatische stikstofbasen bevatten.]
- PT : alcatrão, carvão, de temperatura elevada ; Alcatrão de hulha  
[O produto de condensação obtido por arrefecimento, aproximadamente à temperatura ambiente, do gas libertado na destilação destrutiva do carvão a temperatura elevada (superior a 700 °C). Um líquido negro viscoso mais denso do que a água. Compõe-se principalmente de uma mistura complexa hidrocarbonetos aromáticos polinucleares. Pode conter pequenas quantidades de compostos fenólicos e de bases azotadas aromáticas.]

NOTA M

ES: creosota; Aceite de lavaje

[Destilado del alquitrán de hulla producido por carbonización a alta temperatura de hulla bituminosa. Compuesto principalmente de hidrocarburos aromáticos, ácidos de alquitrán y bases de alquitrán.]

DA: creosot; Vaskeolie

[Destillatet af stenkulstjære fremstillet ved højtemperaturforkulning af bituminøs kul. Det består primært af aromatiske carbonhydrider, tjæresyrer og tjærebaser.]

DE: Kreosot; Waschöl

[Kohlenteerdestillat aus der Hochtemperaturverkokung von Steinkohle. Besteht in erster Linie aus aromatischen Kohlenwasserstoffen, Teersäuren und Teerbasen.]

EL: κρεόζωτο; Έλαια έκλυσης

[Το απόσταγμα λιθανθρακόπισσας που παράγεται με την εξανθράκωση σε υψηλή θερμοκρασία διτουμενικού άνθρακα. Συνίσταται πρωτίστως από αρωματικούς υδρογονάνθρακες, οξέα πίσσας και βάσεις πίσσας.]

EN: Creosote; Wash Oil

[The distillate of coal tar produced by the high temperature carbonization of bituminous coal. It consists primarily of aromatic hydrocarbons, tar acids and tar bases.]

FR: creosote; Huile de lavage

[Distillat de goudron de houille produit par carbonisation à haute température de charbon bitumineux. Se compose principalement d'hydrocarbures aromatiques, d'huiles de goudron acides et de bases de goudron.]

IT: creosoto; Olio lavaggio gas

[Distillato di catrame di carbone prodotto mediante distillazione ad alta temperatura del carbone bituminoso. È costituito principalmente da idrocarburi aromatici, acidi di catrame e basi di catrame.]

NL: creosoot; Benzol-wasolie

[Het destillaat van koolteer geproduceerd bij de carbonisatie bij hoge temperatuur van vette kolen. Het bestaat voornamelijk uit aromatische koolwaterstoffen, teerzuren en teerbasen.]

PT: creosote; óleo de lavagem

[O destilado do alcatrão de carvão produzido pela carbonização a temperatura elevada de carvão betuminoso. É constituído principalmente por hidrocarbonetos aromáticos, ácidos do alcatrão e bases do alcatrão.]

[Komplexe Kombination von Kohlenwasserstoffen aus der Destillation von Anthracen, das man durch Kristallisation von Anthracenöl aus bituminösem leichtem Temperatur-Teer erhält. Siedet im ungefähren Bereich von 290 °C bis 340 °C. Enthält hauptsächlich trinukleare Aromaten und ihre Dihydroderivate.]
- EL : ελαίου ανθρακενίου, πάστας ανθρακενίου, ελαφρά αποστάγματα· Κλάσμα ελαίων ανθρακενίου  
[Πολύπλοκος συνδυασμός υδρογονανθράκων από την απόσταξη ανθρακενίου που λαμβάνεται με κρυστάλλωση ελαίου ανθρακενίου από διτουμενική πίσσα χαμηλής θερμοκρασίας και βράζει στην περιοχή από 290° C ως 340° C περίπου. Περιέχει κυρίως τριπυρηνικά αρωματικά και διυδρο παράγωγά τους.]
- EN : Anthracene oil, anthracene paste, distn. lights ; Anthracene Oil Fraction  
[A complex combination of hydrocarbons from the distillation of anthracene obtained by crystallization of anthracene oil from bituminous light temperature tar and boiling in the range of approximately 290 °C to 340 °C (554° F to 644° F). It contains chiefly trinnuclear aromatics and their dihydro derivatives.]
- FR : huile anthracénique, pâte anthracénique, fraction légère de distillation ; Fraction d'huile anthracénique  
[Combinaison complexe d'hydrocarbures résultant de la distillation de l'anthracène obtenu par cristallisation de l'huile anthracénique à partir de goudron à basse température bitumineux ; son point d'ébullition est compris approximativement entre 290° C et 340° C. Contient principalement des composés aromatiques tricycliques et leur dérivés dihydrogénés.]
- IT : olio di antracene, pasta di antracene, frazioni leggere della distillazione ; Frazione di olio di antracene  
[Combinazione complessa di idrocarburi dalla distillazione di antracene ottenuta mediante cristallizzazione di olio di antracene da catrame bituminoso ad alta temperatura e con punto di ebollizione nell'intervallo 290 °C-340 °C ca. Contiene prevalentemente aromatici triciclici e loro di idroderivati.]
- NL : antraceenolie, antraceenpasta, lichte destillatiefracties ; Anthraceen olie, fractie  
[Een complexe verzameling koolwaterstoffen uit de destillatie van antraceen die wordt verkregen door de kristallisatie van antraceenolie uit bitumineuze lage temperatuur teer, met een kooktraject van ongeveer 290 °C tot 340 °C. Bevat hoofdzakelijk trinucleaire aromaten en dihydroderivaten daarvan.]
- PT : oleo de antraceno, pasta de antraceno, fracções leves da destilação ; Fracção de óleo antracénico  
[Uma combinação complexa de hidrocarbonetos da destilação de antraceno obtido por cristalização de óleo de antraceno de alcatrão de carvão betuminoso de temperatura baixa e que destila no intervalo de aproximadamente 290 °C a 340 °C. Contém sobretudo hidrocarbonetos aromáticos trinucleares e os seus derivados dihidro.]

NOTA M

- ES:** aceite de creosota, destilado de bajo punto de ebullición ; Aceite de lavaje  
[Fracción de destilación de bajo punto de ebullición obtenida de la carbonización a elevada temperatura de hulla bituminosa, que se refina de nuevo para separar el exceso de sales cristallinas. Compuesta principalmente de aceite de creosota con algo de sales aromáticas polinucleares normales, que son componentes del destilado de alquitrán de hulla, separados. Está libre de cristales a aproximadamente 38 °C.]
- DA:** kresotolie, lavtkogende destillat ; Vaskeolie  
[Den lavtkogende destillationsfraktion opnået fra højtemperatur-forkulningen af bituminøse kul, som yderligere raffineres for at fjerne overskud af krystallinske salte. Den består overvejende af kresotolie samt nogle af de normale polycykliske aromatiske salte, som er komponenter af stenkulstjæredestillat, fjernede. Den er krystalfri ved omtrent 38 °C.]
- DE:** Kreosotöl, niedrigsiedendes Destillat ; Waschöl  
[Niedrigsiedender Destillationsbestandteil, erhalten aus der Hochtemperatur-Verkokung von Steinkohle, die weiter aufbereitet wird, um überschüssige kristalline Salze zu entfernen. Besteht in erster Linie aus Kreosotöl, aus dem einige der normalerweise vorkommenden polynuklearen aromatischen Salze, die Bestandteile von Kohlenteerdestillaten sind, entfernt sind. Ist bei etwa 38 °C kristallfrei.]
- EL:** κρεοζωτελαίου, αποστάγματα χαμηλής θερμοκρασίας δρασμού· Έλαια έκπλυσης  
[Το χαμηλής θερμοκρασίας δρασμού κλάσμα απόσταξης που λαμβάνεται από την εξανθράκωση σε υψηλή θερμοκρασία πύσσουχου άνθρακα, που εν συνεχεία καθαρίζεται για να απομακρυνθεί η περίσσεια των κρυσταλλικών αλατών. Συνίσταται πρωτίστως από κρεοζωτέλαιο από το οποίο έχουν απομακρυνθεί μερικά από τα κανονικά πολυκυκλικά αρωματικά αλατά, που είναι συστατικά αποσταγμάτων λιθανθρακόπισσας. Στους 38 °C περίπου είναι ελεύθερο κρυστάλλων.]
- EN:** Creosote oil, low-boiling distillate ; Wash Oil  
[The low-boiling distillation fraction obtained from the high temperature carbonization of bituminous coal, which is further refined to remove excess crystalline salts. It consists primarily of creosote oil with some of the normal polynuclear aromatic salts which are components of coal tar distillate, removed. It is crystal free at approximately 38 °C (100 °F).]
- FR:** huile de créosote, distillat à bas point d'ébullition ; Huile de lavage  
[Fraction de distillation, à bas point d'ébullition, obtenue par carbonisation à haute température de charbon bitumineux, puis raffinée en vue de séparer les sels cristallins en excès. Se compose principalement d'huile de créosote, une partie des sels aromatiques polycycliques entrant normalement dans la composition des distillats de goudron de houille ayant été éliminée. La fraction est exempte de cristaux à partir de 38 °C approximativement.]
- IT:** olio de cresoto, distillato bassobollente ; Olio lavaggio gas  
[Il taglio di distillazione bassobollente ottenuto dalla carbonizzazione ad alta temperatura di carbone bituminoso che viene ulteriormente raffinato per separare i sali cristallini in eccesso. È costituito principalmente da olio di cresoto da cui sono stati separati alcuni dei sali aromatici polinucleari normali che compongono i distillati del catrame di carbone. È privo di cristalli alla temperatura di 38 °C ca.]
- NL:** creosootolie, laagkokend destillaat ; Benzol-wasolie  
[De laag kokende destillatiefraction die wordt verkregen door de carbonisatie bij hoge temperatuur van bitumineuze kool, en die verder wordt gezuiverd om een overschot aan kristallijne zouten te verwijderen. Bestaat voornamelijk uit creosootolie, waarbij sommige van de normale polynucleaire aromatische zouten, die een bestanddeel vormen van koolteerdestillaat, zijn verwijderd. Het is kristalvrij bij ongeveer 38 °C.]
- PT:** óleo de creosote, destilado de ponto de ebulição baixo ; óleo de lavagem  
[A fração da destilação com ponto de ebulição baixo obtida da carbonização a temperatura elevada de carvão betuminoso, que é posteriormente refinada para remover o excesso de sais cristalinicos. É constituída principalmente por óleo de creosote com alguns dos sais normais aromáticos polinucleares, que são constituintes de destilados de alcatrão de carvão, removidos. Não apresenta cristais a aproximadamente 38 °C.]

- DE : Extraktöle (Kohle), Teerbase- ; Säureextrakt  
[Extrakt aus dem Rückstand vom alkalischen Extrakt aus Kohlenteeröl, hergestellt durch saure Wäsche, zum Beispiel wässriger Schwefelsäure, nach der Destillation zum Entfernen von Naphthalin. Besteht in erster Linie aus den sauren Salzen verschiedener aromatischer Stickstoffbasen einschließlich Pyridin, Chinolin und ihren Alkylderivaten.]
- EL : έλαια εκχύλισματος (άνθρακα), βάσεως πίσσας Όξινο εκχύλισμα  
[Το εκχύλισμα από υπόλειμμα αλκαλικού εκχυλίσματος ελαίου λιθανθρακόπισσας που παράγεται με έκλυση με όξινο μέσο, όπως υδατικό θειικό οξύ μετά από απόσταξη για την απομάκρυνση της ναφθαλίνης, αποτελείται κυρίως από τα όξινα άλατα διαφόρων αρωματικών αζωτοδχων βάσεων συμπεριλαμβανομένων της πυριδίνης, κινολίνης και αλκυλοπαράγωγων τους.]
- EN : Extract oils (coal), tar base ; Acid Extract  
[The extract from coal tar oil alkaline extract residue produced by an acidic wash such as aqueous sulfuric acid after distillation to remove naphthalene. Composed primarily of the acid salts of various aromatic nitrogen bases including pyridine, quinoline, and their alkyl derivatives.]
- FR : huiles d'extrait de base de goudron (charbon) ; Extrait acide  
[Extrait du résidu de l'extraction alcaline d'huile de goudron de houille obtenue par un lavage acide avec, par exemple, de l'acide sulfurique aqueux, après distillation en vue d'éliminer le naphthalène. Se compose principalement de sels acides de différentes bases aromatiques azotées telles que la pyridine, la quinoline et leurs dérivés alkylés.]
- IT : olii di estrazione (carbone), basi del catrame ; Estratto acido  
[L'estratto del residuo di estrazione alcalina di olio di catrame di carbone prodotto per lavaggio acido, ad es. con acido solforico, dopo separazione del naftalene per distillazione. È composto principalmente dai sali acidi di varie basi azotate aromatiche comprendenti la piridina, la chinolina e i loro alchil-derivati.]
- NL : extractoliën (kool), teerbase ; Zuur extract  
[Het extract uit het residu van het alkalisch extract van koolteerolie dat wordt gevormd door een zure spoeling, zoals watrig zwavelzuur, na destillatie waarbij naftaleen wordt verwijderd. Voornamelijk samengesteld uit de zure zouten van meerdere aromatische stikstofbasen inclusief pyridine en chinoline en alkylderivaten daarvan.]
- PT : oleos de extracção (carvão), bases do alcatrão ; Extractos ácidos  
[O extracto do residuo de extracção alcalina do óleo de alcatrão de carvão produzido por lavagem com um ácido tal como o ácido sulfúrico aquoso após destilação para remover naftaleno. Compõe-se principalmente dos sais ácidos de várias bases azotada aromáticas incluindo piridina, quinolina, e os seus derivados alquilo.]

NOTA J

- ES : aceite ligero (hulla), horno de coque ; Benzol bruto  
[Líquido orgánico volátil extraído del gas desprendido en la destilación destructiva de hulla a elevada temperatura (mayor de 700 °C). Compuesto principalmente de benceno, tolueno y xilenos. Puede contener otros constituyentes hidrocarbonados minoritarios.]
- DA : letolie (kul), koksovn- ; Rå benzol  
[Den flygtige, organiske væske ekstraheret fra gassen udviklet ved tørdestillation af kul ved høj temperatur (højere end 700 °C). Sammensat primært af benzen, toluen og xylener. Kan indeholde andre mindre carbonhydridkomponenter.]
- DE : Leichtöl (Kohle), Koksofen- ; Rohbenzol  
[Flüchtige organische Flüssigkeit, extrahiert aus dem Gas, das bei der Hochtemperatur- (größer als 700 °C) -Entgasung von Kohle anfällt. Besteht in erster Linie aus Benzol, Toluol und Xylenen. Kann andere kleine Kohlenwasserstoffbestandteile enthalten.]
- EL : ελαφρό έλαιο (άνθρακα), κλιβάνου παραγωγής κοκ· Ακάθαρτη βενζόλη  
[Το πτητικό οργανικό υγρό που εξάγεται από το αέριο το οποίο εκλύεται κατά την ξηρά απόσταξη άνθρακα σε υψηλή θερμοκρασία (πάνω από 700 °C). Αποτελείται πρωτίστως από βενζόλιο, τολουόλιο και ξυλόλια. Μπορεί να περιέχει και άλλους, μικρότερης σημασίας υδρογονάνθρακες.]
- EN : Light oil (coal), coke-oven ; Crude benzole  
[The volatile organic liquid extracted from the gas evolved in the high temperature (greater than 700 °C (1 292 °F)) destructive distillation of coal. Composed primarily of benzene, toluene, and xylenes. May contain other minor hydrocarbon constituents.]
- FR : huile légère (charbon), four à coke ; Benzol brut  
[Liquide organique volatil extrait du gaz issu de la distillation destructive du charbon à haute température (au-dessus de 700 °C). Se compose principalement de benzène, de toluène et de xylènes. Peut également contenir de petites quantités d'autres hydrocarbures.]
- IT : olio leggero (carbone), forno da coke ; Benzene grezzi  
[Liquido organico volatile estratto dal gas che si sviluppa nella distillazione distruttiva ad alta temperatura (superiore a 700 °C) del carbone. È composto principalmente da benzolo, toluolo e xiloli. Può contenere altri costituenti idrocarburici minori.]
- NL : lichte olie (kool), cokesoven ; Ruwe benzol  
[De vluchtige organische vloeistof die wordt geëxtraheerd uit het gas dat vrijkomt bij de destructieve destillatie van kool bij hoge temperatuur (hoger dan 700 °C). Voornamelijk samengesteld uit benzeen, toluen en xylenen. Kan andere ondergeschikte koolwaterstofbestanddelen bevatten.]
- PT : óleo leve (carvão), alto forno ; Benzol bruto  
[O líquido orgânico volátil extraído do gás libertado na destilação destrutiva do carvão a temperatura (superior a 700 °C). Compõe-se principalmente de benzeno, tolueno, e xilenos. Pode conter outros hidrocarbonetos minoritários.]

NOTA J

- ES** destilados (hulla), primarios de la extracción con líquido disolvente ;  
 [Producto líquido de la condensación de vapores emitidos durante la extracción de hulla en un líquido disolvente y con un intervalo de ebullición aproximado de 30 °C a 300 °C. Compuesto principalmente de hidrocarburos aromáticos con anillos condensados hidrogenados parcialmente, compuestos aromáticos con nitrógeno, oxígeno y azufre y sus alquil derivados con un número de carbonos en su mayor parte dentro del intervalo de C<sub>4</sub> a C<sub>14</sub>.]
- DA** destillater (kul), flydende solventekstraktion primære ;  
 [Det flydende produkt fra kondensation af dampe afgivet under omsætningen af kul i et flydende solvent, med kogesinterval omtrent fra 30 °C til 300 °C. Sammensat primært af delvist hydrogenerede, ringkondenserede, aromatiske carbonhydrider, aromatiske forbindelser indeholdende nitrogen, oxygen og svovl og deres alkylderivater, med carbonantal overvejende i området fra C<sub>4</sub> til og med C<sub>14</sub>.]
- DE** Destillate (Kohle), flüssige Lösungsmittel-extraktion primär ;  
 [Flüssiges Produkt der Kondensation von Dämpfen, die während des Aufschließens von Kohle in einem flüssigen Lösungsmittel austreten und in einem Bereich von etwa 30 °C bis 300 °C sieden. Besteht in erster Linie aus teilweise hydrierten aromatischen Kohlenwasserstoffen mit kondensierten Ringen, aromatischen Verbindungen, die Stickstoff, Sauerstoff und Schwefel enthalten, und ihren Alkylderivaten mit Kohlenstoffzahlen vorherrschend im Bereich von C<sub>4</sub> bis C<sub>14</sub>.]
- EL** αποσταγμάτα (άνθρακα), εκχύλισης με υγρό διαλύτη κύρια ;  
 [Το υγρό προϊόν της συμπύκνωσης ατμών που εκλύονται κατά την διάλυση άνθρακα είναι σε υγρό διαλύτη και το οποίο δράζει στην περιοχή από 30 °C ως 300 °C περίπου. Αποτελείται πρωτίστως από μερικώς υδρογονωμένους αρωματικούς υδρογονάνθρακες με συμπυκνωμένους δακτύλιους, αρωματικές ενώσεις που περιέχουν άζωτο, οξυγόνο και θείο και αλκυλο παράγωγά τους, με αριθμό ατόμων άνθρακα κυρίως στην περιοχή από C<sub>4</sub> ως C<sub>14</sub>.]
- EN** Distillates (coal), liq. solvent extn., primary ;  
 [The liquid product of condensation of vapors emitted during the digestion of coal in a liquid solvent and boiling in the range of approximately 30 °C to 300 °C (86 °F to 572 °F). Composed primarily of partly hydrogenated condensed-ring aromatic hydrocarbons, aromatic compounds containing nitrogen, oxygen and sulfur, and their alkyl derivatives having carbon numbers predominantly in the range of C<sub>4</sub> through C<sub>14</sub>.]
- FR** distillats primaires (charbon), extraction au solvant liquide ;  
 [Liquide produit par la condensation des vapeurs émises au cours de la décomposition du charbon dans un solvant liquide. Son point d'ébullition est approximativement compris entre 30 °C et 300 °C. Se compose principalement d'hydrocarbures aromatiques à noyaux condensés partiellement hydrogénés, de composés aromatiques contenant de l'azote, de l'oxygène et du soufre, et de leurs dérivés alkyles, dont le nombre de carbonnes se situe en majorité dans la gamme C<sub>4</sub>-C<sub>14</sub>.]
- IT** distillati (carbone), estrazione con solvente liquido, primaria ;  
 [Il prodotto liquido di condensazione dei vapori emessi durante la digestione del carbone in un solvente liquido e con un intervallo di ebollizione 30 °C-300 °C ca. Costituito principalmente da idrocarburi aromatici ad anelli condensati parzialmente idrogenati, composti aromatici contenenti azoto, ossigeno e zolfo, e loro alchil derivati con numero di atomi di carbonio prevalentemente nell'intervallo C<sub>4</sub>-C<sub>14</sub>.]
- NL** destillaten (kool), primaire vloeibaar solvent-extractie ;  
 [Het vloeibare produkt van de condensatie van tijdens het oplossen van kool in een vloeibaar solvent uitgestote damp, met een kooktraject van ongeveer 30 °C tot 300 °C. Bestaat voornamelijk uit gedeeltelijk gehydrogeneerde aromatische koolwaterstoffen met gecondenseerde ringssystemen, aromatische verbindingen met stikstof, zuurstof en zwavel en de alkylderivaten daarvan, overwegend C<sub>4</sub> tot en met C<sub>14</sub>.]
- PT** destilados (carvão), primários da extracção com solvente ;  
 [O produto líquido da condensação de vapores libertos durante a digestão de carvão num solvente líquido e que destila no intervalo de aproximadamente 30 °C a 300 °C. É constituído principalmente por hidrocarbonetos aromáticos polinucleares hidrogenados, compostos aromáticos contendo azoto, oxigénio e enxofre, e seus derivados alquilo com números de átomos de carbono predominantemente na gama de C<sub>4</sub> ate C<sub>14</sub>.]

NOTA I

- ES: destilados (hulla), fracción intermedia hidrocraqueada de la extracción con disolvente ;  
[Destilado obtenido del hidrocrackeo del extracto o solución de hulla producidos por la extracción con líquido disolvente o por procesos de extracción con gas supercrítico y con un intervalo de ebullición aproximado de 180 °C a 300 °C. Compuesto principalmente de compuestos aromáticos con dos anillos, aromáticos hidrogenados y nafténicos, sus alquil derivados y alcanos con un número de carbonos en su mayor parte dentro del intervalo de  $C_6$  a  $C_{14}$ . También están presentes compuestos con nitrógeno, azufre y oxígeno.]
- DA: destillater (kul), solventekstraktion hydrokrakkede middeltinge ;  
[Destillat opnået ved hydrokraking af kul-ekstrakt eller opløsning, fremstillet ved flydende solventekstraktions- eller superkritisk gasextraktionsprocesser, med koginterval omtrent fra 180 °C til 300 °C. Sammesat primært af bicycliske aromatiske, hydrogenerede aromatiske og naphtheniske forbindelser, deres alkylderivater og alkaner, overvejende  $C_6$  til og med  $C_{14}$ . Nitrogen-, svovl- og oxygenholdige forbindelser er også tilstede.]
- DE: Destillate (Kohle), Lösungsmittelextraktion hydrogekrackte mittlere ;  
[Destillat, das man durch Hydrokracken von Kohlenextrakt oder der Lösung erhält, die durch flüssige Lösungsmittelextraktions- oder überkritische Gasextraktionsverfahren entsteht und in einem Bereich von etwa 180 °C bis 300 °C siedet. Besteht in erster Linie aus aromatischen Verbindungen mit zwei Ringen, hydrierten aromatischen und naphthenhaltigen Verbindungen, ihren Alkylderivaten und Alkanen mit Kohlenstoffzahlen vorherrschend im Bereich von  $C_6$  bis  $C_{14}$ . Stickstoff-, Schwefel- und Sauerstoff-enthaltende Verbindungen sind auch vorhanden.]
- EL: αποστάγματα (άνθρακα), εκχύλισης με διαλύτη υδρογονοπυρολυμένα μεσαία ;  
[Απόσταγμα που λαμβάνεται από την υδρογονοπυρόλυση διαλύματος ή εκχύλισματος άνθρακα που παράγεται με μεθόδους εκχύλισης με υγρό διαλύτη ή εκχύλισης με υπερκρίσιμο αέριο και το οποίο δράζει στην περιοχή από 180 °C ως 300 °C περίπου. Αποτελείται πρωτίστως από αρωματικές με δύο δακτυλίους, υδρογονωμένες αρωματικές και ναφθενικές ενώσεις, αλκύλιο παράγωγά τους και αλκάνια, που έχουν αριθμό ατόμων άνθρακα κυρίως στην περιοχή από  $C_6$  και  $C_{14}$ . Ενυπάρχουν επίσης ενώσεις που περιέχουν άζωτο, θείο και οξυγόνο.]
- EN: Distillates (coal), solvent extn., hydrocracked middle ;  
[Distilla obtained from the hydrocracking of coal extract or solution produced by the liquid solvent extraction or supercritical gas extraction processes and boiling in the range of approximately 180 °C to 300 °C (356 °F to 572 °F). Composed primarily of two-ring aromatic, hydrogenated aromatic and naphthenic compounds, their alkyl derivatives and alkanes having carbon numbers predominantly in the range of  $C_6$  through  $C_{14}$ . Nitrogen, sulfur and oxygen-containing compounds are also present.]
- FR: distillats moyens d'hydrocraquage (charbon), extraction au solvant ;  
[Distillat obtenu par hydrocraquage de l'extract de charbon ou de la solution issue de l'extraction au solvant liquide ou au fluide supercritique. Son point d'ébullition est approximativement compris entre 180 °C et 300 °C. Se compose principalement de composés aromatiques bicycliques, de composés naphthéniques et aromatiques hydrogénés, de leurs dérivés alkylés et d'alcane dont le nombre de carbones se situe en majorité dans la gamme  $C_6$  -  $C_{14}$ . Contient également des composés azotés, soufrés et oxygénés.]
- IT: distillati (carbone), frazione intermedia di idrocracking di estrazione con solvente ;  
[Distillato ottenuto per idrocracking di estratto di carbone o soluzione prodotta dai processi di estrazione con solvente liquido o di estrazione con gas supercritico e con un intervallo di ebollizione 180 °C-300 °C ca. Costituito principalmente da aromatici a due anelli, aromatici idrogenati e naftenici, loro alchil derivati ed alcani con numero di atomi di carbonio prevalentemente nell'intervallo  $C_6$  -  $C_{14}$ . Sono anche presenti composti contenenti azoto, zolfo e ossigeno.]
- NL: destillaten (kool), solventextractie met waterstof gekraakte middenfractie ;  
[Destillaat, verkregen door het met waterstof kraken van koolextract of de oplossing geproduceerd door het vloeibaar solvent extractie- of het superkritisch gas extractieproces, met een kooktraject van ongeveer 180 °C tot 300 °C. Bestaat voornamelijk uit aromatische verbindingen met twee ringen, gehydrogeneerde aromatische en naftenische verbindingen en alkylderivaten daarvan en alkanen, overwegend  $C_6$  tot en met  $C_{14}$ . Stikstof, zwavel en zuurstof bevattende verbindingen zijn eveneens aanwezig.]
- PT: destilados (carvão), médios do hidrocracking da extração com solvente ;  
[Destilado obtido do hidrocracking de extracto ou solução de carvão produzidos pelos processos de extração com solvente líquido ou extração com fluido supercrítico e que destila no intervalo de aproximadamente 180 °C a 300 °C. É constituído principalmente por compostos aromáticos bicíclicos, aromáticos hidrogenados e nafténicos, os seus derivados alquílo e alcanos com números de átomos de carbono predominantemente na gama de  $C_6$  até  $C_{14}$ . Também estão presentes compostos contendo azoto, enxofre e oxigénio.]

## NOTA H

- ES: combustibles, avión a reacción, extracción de hulla con disolvente, hidrogenados hidrocracados ;  
[Combustible de motor a reacción producido por hidrogenación de la fracción intermedia del destilado de los productos del hidrocrackeo del extracto o solución de hulla producidos por la extracción con líquido disolvente o por procesos de extracción con gas supercrítico y con un intervalo de ebullición aproximado de 180 °C a 225 °C. Compuesto principalmente de hidrocarburos hidrogenados con dos anillos y sus alquil derivados con un número de carbonos en su mayor parte dentro del intervalo de C<sub>10</sub> a C<sub>12</sub>.]
- DA: brændstoffer, jettfly, kulsolventekstraktion, hydrokrakkede hydrogenerede ;  
[Jetmotorbrændstof fremstillet ved hydrogenering af den middeltunge destillationsfraktion fra produkterne fra hydrokrakning af kul-ekstrakt eller opløsning, fremstillet ved flydende solventekstraktions- eller superkritisk gasekstraktionsprocesser, med koges- interval omtrent fra 180 °C til 225 °C. Sammensat primært af hydrogenerede, bicycliske carbonhydrider og deres alkylderivater, overvejende C<sub>10</sub> til og med C<sub>12</sub>.]
- DE: Brennstoffe, Düsenflugzeug, Kohle Lösungsmittlextraktion, hydrogekrackte hydrierte ;  
[Düsenantriebsbrennstoff, hergestellt durch Hydrierung der Mitteldestillat-Fraktion der Hydrokrackprodukte von Kohlenextrakt oder der Lösung, die durch flüssige Lösungsmittlextraktions- oder überkritische Gasextraktionsverfahren entsteht und in einem Bereich von etwa 180 °C bis 225 °C siedet. Besteht in erster Linie aus hydrierten Kohlenstoffverbindungen mit zwei Ringen und ihren Alkylderivaten mit Kohlenstoffzahlen vorherrschend im Bereich von C<sub>10</sub> bis C<sub>12</sub>.]
- EL: καυσίμοι, αεριωθούμενων αεροπλάνων, εκχύλισης άνθρακα με διαλύτη, υδρογονοπυρολυμένα υδρογονωμένα ;  
[Καύσιμο μηχανής αεριωθούμενου που παράγεται με υδρογόνωση του κλάσματος μεσαίου αποστάγματος των προϊόντων υδρογονοπυρόλυσης εκχυλίσματος ή διαλύματος άνθρακα που παράγεται με μεθόδους εκχύλισης με υγρό διαλύτη ή εκχύλισης με υπερκρίσιμο αέριο, και το οποίο βρίσκεται στην περιοχή από 180 °C ως 225 °C περίπου. Αποτελείται πρωτίστως από υδρογονωμένους υδρογονάνθρακες με δύο δακτύλιους και αλκυλο παράγωγά τους με αριθμό ατόμων άνθρακα στην περιοχή από C<sub>10</sub> ως C<sub>12</sub>.]
- EN: Fuels, jet aircraft, coal solvent extrn., hydrocracked hydrogenated ;  
[Jet engine fuel produced by hydrogenation of the middle distillate fraction of the products of hydrocracking of coal extract or solution produced by the liquid solvent extraction or supercritical gas extraction processes and boiling in the range of approximately 180 °C to 225 °C (356 °F to 473 °F). Composed primarily of hydrogenated two-ring hydrocarbons and their alkyl derivatives having carbon numbers predominantly in the range of C<sub>10</sub> through C<sub>12</sub>.]
- FR: carburéacteurs pour avion, extraction au solvant de charbon, hydrocraquage, hydrogénation ;  
[Carburéacteur produit par hydrogénation de la fraction distillat moyen des produits d'hydrocraquage de l'extract de charbon ou de la solution issue de l'extraction au solvant liquide ou au fluide supercritique. Son point d'ébullition est approximativement compris entre 180 °C et 225 °C. Se compose principalement d'hydrocarbures bicycliques hydrogénés et de leurs dérivés alkylés dont le nombre de carbones se situe en majorité dans la gamme C<sub>10</sub>-C<sub>12</sub>.]
- IT: carburanti, aerei a reazione, estrazione del carbone con solvente, idrogenati da idrocracking ;  
[Carburante per motori a reazione prodotto per idrogenazione della frazione intermedia del distillato dei prodotti di idrocracking da estratto di carbone o soluzione prodotta dai processi di estrazione con solvente liquido o di estrazione con gas supercritico e con un intervallo di ebollizione 180 °C-225 °C ca. Costituito principalmente da idrocarburi idrogenati a due anelli e loro alchil derivati con numero di atomi di carbonio prevalentemente nell'intervallo C<sub>10</sub>-C<sub>12</sub>.]
- NL: brandstoffen, straaltvliegtuig, kool solventextractie, met waterstof gekraakt gehydrogeneerd ;  
[Straalmotorbrandstof, geproduceerd door hydrogenering van de destillatmiddenfractie van de produkten van het met waterstof kraken van een koolextract, of de oplossing geproduceerd door een vloeibaar solventextractie- of een superkritisch gasextractie-proces, met een kooktraject van ongeveer 180 °C tot 225 °C. Bestaat voornamelijk uit gehydrogeneerde koolwaterstoffen met twee ringen en alkylderivaten daarvan, overwegend C<sub>10</sub> tot en met C<sub>12</sub>.]
- PT: combustíveis, aviões a jacto, da extração do carvão com solvente, hidrogenados do hidrocracking ;  
[Combustível para motores a jacto produzido por hidrogenação da fração de destilado média dos produtos do hidrocracking de extracto ou solução de carvão produzidos pelos processos de extração com solvente líquido ou extração com fluido e supercrítico que destila no intervalo de aproximadamente 180 °C a 225 °C. É constituído principalmente por hidrocarbonetos binucleares hidrogenados e seus derivados alquilo com números de carbono predominantemente na gama de C<sub>10</sub> até C<sub>12</sub>.]

NOTA H

- ES:** residuos (petróleo), torre atmosférica ; Fuelóleo pesado  
[Residuo complejo de la destilación atmosférica de petróleo crudo. Compuesto de hidrocarburos con un número de carbonos en su mayor parte superior a  $C_{20}$  y con un punto de ebullición aproximado por encima de 350 °C. Esta corriente es probable que contenga un 5 % en peso o más de hidrocarburos aromáticos con anillos condensados de 4 a 6 miembros.]
- DA:** rester (råolie), atmosfærisk tårn ; Fuelolie  
[En sammensat remanens fra atmosfærisk destillation af råolie. Den består af carbonhydrider, overvejende større end  $C_{20}$ , og koger omtrent over 350 °C. Denne strøm indeholder sandsynligvis 5 vægtprocent, eller mere, aromatiske carbonhydrider, bestående af 4- til 6-leddede kondenserede ringe.]
- DE:** Rückstände (Erdöl), offener Turm ; Heizöl schwer  
[Komplexer Rückstand aus der offenen Destillation von Rohöl. Besteht aus Kohlenwasserstoffen mit Kohlenstoffzahlen vorherrschend größer als  $C_{20}$  und siedet über etwa 350 °C. Dieser Lauf enthält wahrscheinlich 5 Gewichtsprocente oder mehr aromatische Kohlenwasserstoffe mit 4- bis 6-gliedrigen kondensierten Ringen.]
- EL:** υπολείμματα (πετρελαίου), ατμοσφαιρικής στήλης Βαρύ μαζούτ  
[Πολύπλοκο υπόλειμμα από την ατμοσφαιρική απόσταξη αργού πετρελαίου. Συνίσταται από υδρογονάνθρακες με αριθμό ατόμων ανθρακα σημαντικά μεγαλύτερο από  $C_{20}$  και που βράζει πάνω από 350 °C περίπου. Το ρεύμα αυτό είναι πιθανό να περιέχει 5 % κατά βάρος ή περισσότερο αρωματικούς υδρογονάνθρακες με τετραμελείς ως εξαμελείς συμπυκνωμένους δακτύλιους.]
- EN:** Residues (petroleum), atm. tower ; Heavy Fuel oil  
[A complex residuum from the atmospheric distillation of crude oil. It consists of hydrocarbons having carbon numbers predominantly greater than  $C_{20}$  and boiling above approximately 350 °C (662 °F). This stream is likely to contain 5 wt. % or more of 4- to 6-membered condensed ring aromatic hydrocarbons.]
- FR:** résidus (pétrole), tour atmosphérique ; Fioul lourd  
[Résidu complexe de la distillation atmosphérique du pétrole brut. Se compose d'hydrocarbures dont le nombre de carbones est en majeure partie supérieur à  $C_{20}$  et dont le point d'ébullition est approximativement supérieur à 350 °C. Peut contenir 5 % ou plus, en poids, d'hydrocarbures aromatiques à noyaux condensés comportant de 4 à 6 cycles.]
- IT:** residui (petrolio), torre di distillazione atmosferica ; Olio combustibile denso  
[Residuo complesso proveniente dalla distillazione atmosferica dell'olio grezzo. È costituito da idrocarburi con numero di atomi di carbonio prevalentemente superiore a  $C_{20}$  e punto di ebollizione superiore a 350 °C ca. Questa corrente di distillati contiene probabilmente il 5 % in peso o più di idrocarburi aromatici a nuclei condensati di 4 a 6 elementi.]
- NL:** residuen (aardolie), atmosferische destillatietoren ; Stookolie  
[Een complex residu, verkregen door atmosferische destillatie van ruwe olie. Bestaat uit koolwaterstoffen, overwegend groter dan  $C_{20}$  en kokend boven ongeveer 350 °C. Deze stroom bevat waarschijnlijk 5 of meer gewichtsprocenten aromatische koolwaterstoffen met 4- tot 6-voudig gecondenseerde ringen.]
- PT:** residuos (petróleo), da coluna atmosférica ; Fuelóleo  
[Um residuo complexo da destilação atmosférica de petróleo bruto. É constituído de hidrocarbonetos com números de átomos de carbono predominantemente superiores a  $C_{20}$  e destila acima de aproximadamente 350 °C. Este produto contém geralmente 5 % em peso ou mais de hidrocarbonetos aromáticos polinucleares com 4 a 6 membros.]

Dieser Lauf enthält wahrscheinlich 5 Gewichtsprozent oder mehr aromatische Kohlenwasserstoffe mit 4- bis 6-gliedrigen kondensierten Ringen.]
- EL** διαυγασμένα έλαια (πετρελαιο), καταλυτικά πυρολυμένα Βαρύ μαζούτ  
[Πολυπλοκός συνδυασμός υδρογονάνθρακων που παράγεται σαν υπολειμματικό κλάσμα από πύρωση των προϊόντων καταλυτικής πυρόλυσης. Συνίσταται από υδρογονάνθρακες με αριθμό ατόμων άνθρακα σημαντικά μεγαλύτερο από  $C_{20}$  και βράζει πάνω από 350 °C περίπου. Το ρεύμα αυτό είναι πιθανό να περιέχει 5 % κατά βάρος ή περισσότερη αρωματικούς υδρογονάνθρακες με τετραμελείς ως εξαμελείς συμπυκνωμένους δακτύλιους.]
- EN** Clarified oils (petroleum), catalytic cracked; Heavy Fuel oil  
[A complex combination of hydrocarbons produced as the residual fraction from distillation of the products from a catalytic cracking process. It consists of hydrocarbons having carbon numbers predominantly greater than  $C_{20}$  and boiling at or approximately 350 °C (662 °F). This stream is likely to contain 5 wt % or more of 4- to 6-membered condensed ring aromatic hydrocarbons.]
- FR** huiles clarifiées (pétrole), craquage catalytique, Fioul lourd  
[Combinaison complexe d'hydrocarbures obtenue comme fraction résiduelle de la distillation des produits résultant d'un craquage catalytique. Se compose d'hydrocarbures dont le nombre de carbones est en majorité supérieur à  $C_{20}$  et dont le point d'ébullition est approximativement supérieur à 350 °C. Peut contenir 5 % ou plus, en poids, d'hydrocarbures aromatiques à noyaux condensés comportant de 4 à 6 cycles.]
- IT** residui purificati (petrolio), cracking catalitico, Olio combustibile denso  
[Combinazione complessa di idrocarburi ottenuta come frazione residua della distillazione dei prodotti provenienti da un processo di cracking catalitico. È costituita da idrocarburi con numero di atomi di carbonio prevalentemente maggiore di  $C_{20}$  e punto di ebollizione superiore a circa 350 °C. Questa frazione di distillazione contiene probabilmente il 5 % in peso o più di idrocarburi aromatici a nuclei condensati di 4-6 elementi.]
- NL** geklaarde oliën (aardolie), katalytisch gekraakt, Stookolie  
[Een complexe verzameling koolwaterstoffen geproduceerd als de residu-fractie van de destillatie van producten uit een katalytisch kraakproces. Bestaat uit koolwaterstoffen, overwegend groter dan  $C_{20}$ , kokend boven ongeveer 350 °C. Deze stroom bevat waarschijnlijk 5 of meer gewichtsprocenten aromatische koolwaterstoffen met 4- tot 6-voudig gecondenseerde ringen.]
- PT** óleos clarificados (petróleo), do cracking catalítico · Fuelóleo  
[Uma combinação complexa de hidrocarbonetos produzida como a fracção residual da destilação dos produtos de um processo de cracking catalítico. É constituída por hidrocarbonetos com numero de átomos de carbono superiores a  $C_{20}$  e destila acima de aproximadamente 350 °C. Esta fracção contém geralmente 5 % em peso ou mais de hidrocarbonetos aromáticos polinucleares com 4 a 6 membros.]

[Πολύπλοκος συνδυασμός υδρογονανθράκων που λαμβάνεται με κατεργασία υπολείμματος στήλης ατμοσφαιρικής απόσταξης με υδρογόνο παρουσία καταλύτη και σε συνθήκες τέτοιες ώστε να απομακρυνθούν πρωτίστως οι οργανικές θειούχες ενώσεις. Συνίσταται από υδρογονάνθρακες με αριθμό ατόμων άνθρακα σημαντικά μεγαλύτερο από  $C_{30}$  και βράζει πάνω από κατά βάρος 350 °C περίπου. Το ρεύμα αυτό συνήθως περιέχει 5 % κατά βάρος ή περισσότερο αρωματικούς υδρογονάνθρακες με τετραμελείς ως εξαμελείς συμπυκνωμένους δακτύλιους.]
- EN : Residues (petroleum), hydrodesulfurized atmospheric tower ; Heavy Fuel oil  
[A complex combination of hydrocarbons obtained by treating an atmospheric tower residuum with hydrogen in the presence of a catalyst under conditions primarily to remove organic sulfur compounds. It consists of hydrocarbons having carbon numbers predominantly greater than  $C_{30}$  and boiling above approximately 350 °C (662 °F). This stream is likely to contain 5 wt % or more of 4- to 6-membered condensed ring aromatic hydrocarbons.]
- FR : résidu de tour atmosphérique (pétrole), hydrodésulfurés ; Fioul lourd  
[Combinaison complexe d'hydrocarbures obtenue par traitement d'un résidu de tour atmosphérique à l'hydrogène en présence d'un catalyseur, sous des conditions destinées essentiellement à l'élimination des composés organiques de soufre. Se compose d'hydrocarbures dont le nombre de carbones est en majorité supérieur à  $C_{30}$  et dont le point d'ébullition est approximativement supérieur à 350 °C. Peut contenir 5 % ou plus, en poids, d'hydrocarbures aromatiques à noyaux condensés comportant de 4 à 6 cycles.]
- IT : residui (petrolio), idrodesolforati torre di distillazione atmosferica ; Olio combustibile denso  
[Combinazione complessa di idrocarburi ottenuta trattando con idrogeno in presenza di un catalizzatore un residuo di distillazione in torre atmosferica, in condizioni volte principalmente all'eliminazione dei composti organici solforati. È costituita da idrocarburi con numero di atomi di carbonio prevalentemente superiore a  $C_{30}$  e punto di ebollizione superiore a circa 350 °C. Questa combinazione può contenere il 5 % in peso o più di idrocarburi aromatici a nuclei condensati di 4-6 elementi.]
- NL : residuen (aardolie), met waterstof onttwaveld atmosferische destillatietoren ; Stookolie  
[Een complexe verzameling koolwaterstoffen, verkregen door behandeling van een residu uit een atmosferische destillatietoren met waterstof in de aanwezigheid van een katalysator onder omstandigheden primair bedoeld om organische zwavelverbindingen te verwijderen. Bestaat uit koolwaterstoffen, overwegend groter dan  $C_{30}$ , kokend boven ongeveer 350 °C. Deze stroom bevat waarschijnlijk 5 of meer gewichtsprocenten aromatische koolwaterstoffen met 4- tot 6-voudig gecondenseerde ringen.]
- PT : resíduos (petróleo), atmosféricos hidrogenodessulfurizados ; Fuelóleo  
[Uma combinação complexa de hidrocarbonetos obtida por tratamento de um residuo atmosférico com hidrogenio na presença de um catalisador em condições para remover principalmente compostos orgânicos de enxofre. É constituída por hidrocarbonetos com numeros de átomos de carbono predominantemente superiores a  $C_{30}$  e destila acima de aproximadamente 350 °C. Este produto geralmente contém 5 % em peso ou mais de hidrocarbonetos aromáticos polinucleares com 4 a 6 membros.]

## NOTA H

- ES. *gasoleos (petróleo), fracción pesada obtenida a vacío hidrodesulfurada ; Fuéoleo pesado*  
[Combinación compleja de hidrocarburos obtenida de un proceso de hidrodesulfuración catalítica. Compuesta de hidrocarburos con un número de carbonos en su mayor parte dentro del intervalo de  $C_{20}$  a  $C_{30}$  y con un intervalo de ebullición aproximado de 350 °C a 600 °C. Esta corriente es probable que contenga un 5 % de peso o más de hidrocarburos aromáticos con anillos condensados de 4 a 6 miembros]
- DA. *gasolier (råolie), hydroafsvovlede tunge vakuum-, Fuelolie*  
[En sammensat blanding af carbonhydrider opnået ved en katalytisk hydroafsvovningsproces. Den består af carbonhydrider, overvejende  $C_{20}$  til og med  $C_{30}$  med koginterval omtrent fra 350 °C til 600 °C. Denne strøm indeholder sandsynligvis 5 vægtprocent, eller mere, aromatiske carbonhydrider, bestående af 4- til 6-leddede kondenserede ringe]
- DE. *Gasöl (Erdöl), hydrodesulfurierte schwere Vakuum-, Heizöl schwer*  
[Komplexe Kombination von Kohlenwasserstoffen, erhalten aus einem katalytischen Hydrodesulfurierungsverfahren. Besteht aus Kohlenwasserstoffen mit Kohlenstoffzahlen vorherrschend im Bereich von  $C_{20}$  bis  $C_{30}$  und siedet im Bereich von etwa 350 °C bis 600 °C. Dieser Lauf enthält wahrscheinlich 5 Gewichtsprozent oder mehr aromatische Kohlenwasserstoffe mit kondensierten Ringen]
- EL. *ακαθάρτα (πετρέλαιου), υδρογονοαποθειωμένα θαρέα κενού· Βαρύ μαζούτ*  
[Πολύπλοκος συνδυασμός υδρογονάνθρακων που λαμβάνεται από καταλυτική υδρογονοαποθειώση. Συνίσταται από υδρογονάνθρακες με αριθμό ατόμων άνθρακα κυρίως στην περιοχή από  $C_{20}$  ως και  $C_{30}$  και βράζει στην περιοχή από 350 °C ως 600 °C περίπου. Το ρεύμα αυτό συνήθως περιέχει 5 % κατά βάρος ή και περισσότερο, αρωματικούς υδρογονάνθρακες με τετραμελείς ως εξαμελείς συμπυκνωμένους δακτύλιους.]
- EN. *Gas oils (petroleum), hydrodesulfurized heavy vacuum, Heavy Fuel oil*  
[A complex combination of hydrocarbons obtained from a catalytic hydrodesulfurization process. It consists of hydrocarbons having carbon numbers predominantly in the range of  $C_{20}$  through  $C_{30}$  and boiling in the range of approximately 350 °C to 600 °C (662 °F to 1112 °F). This stream is likely to contain 5 wt % or more of 4- to 6 membered condensed ring aromatic hydrocarbons.]
- FR. *gazoles lourds sous vide (pétrole), hydrodésulfurés, Fioul lourd*  
[Combinaison complexe d'hydrocarbures obtenue par un procédé d'hydrodésulfuration catalytique. Se compose d'hydrocarbures dont le nombre de carbones se situe principalement dans la gamme  $C_{20}$ - $C_{30}$  et dont le point d'ébullition est compris approximativement entre 350 °C et 600 °C. Peut contenir 5 % ou plus, en poids, d'hydrocarbures aromatiques à noyaux condensés comportant de 4 à 6 cycles]
- IT. *gasoli (petrolio), pesanti idrodesolforati sotto vuoto, Olio combustibile denso*  
[Combinazione complessa di idrocarburi ottenuta da un processo di idrodesolforazione catalitica. È costituita da idrocarburi con numero di atomi di carbonio prevalentemente nell'intervallo  $C_{20}$ - $C_{30}$  e punto di ebollizione nell'intervallo 350 °C-600 °C ca. Questa frazione può contenere il 5 % in peso o più di idrocarburi aromatici a nuclei condensati di 4-6 elementi]
- NL. *gasoliën (aardolie), met waterstof ontzwaveld zwaar vacuümdestillatiefractie, Stookolie*  
[Een complexe verzameling koolwaterstoffen, verkregen uit een katalytisch waterstofontzwavelingsproces. Bestaat uit koolwaterstoffen, overwegend  $C_{20}$  tot en met  $C_{30}$ , met een kooktraject van ongeveer 350 °C tot 600 °C. Deze stroom bevat waarschijnlijk 5 of meer gewichtsprocenten aromatische koolwaterstoffen met 4- tot 6-voudig gecondenseerde ringen]
- PT. *gasoleos (petróleo), de vácuo pesados hidrogenodessulfurizados ; Fuelóleo*  
[Uma combinação complexa de hidrocarbonetos obtida de um processo de hidrogenodessulfuração catalítica. É constituída por hidrocarbonetos com números de átomos de carbono predominantemente na gama de  $C_{20}$  até  $C_{30}$  e destila no intervalo de aproximadamente 350 °C a 600 °C. Este produto geralmente contém 5 % em peso ou mais de hidrocarbonetos aromáticos polinucleares com 4 a 6 membros]

NOTA H

- ES** residuos (petroleo), craqueados a vapor, Fueloleo pesado  
[Combinación compleja de hidrocarburos obtenida como la fracción residual de la destilación de los productos de un proceso de craqueo a vapor (incluyendo craqueo por vapor para producir etileno). Compuesta fundamentalmente de hidrocarburos insaturados con un número de carbonos en su mayor parte superior a  $C_{14}$  y con un punto de ebullición aproximado por encima de  $260^{\circ}\text{C}$ . Esta corriente es probable que contenga un 5 % en peso o más de hidrocarburos aromáticos con anillos condensados de 4 a 6 miembros.]
- DA** rester (råolie) dampkrakkede, Fuelolie  
[En sammensat blanding af carbonhydrier opnået som restfraktionen fra destillation af produkterne fra en dampkrakningsproces (herunder dampkrakning for at fremstille ethylen). Den består overvejende af umættede carbonhydrier overvejende større end  $C_{14}$  og koger omtrent over  $260^{\circ}\text{C}$ . Denne strøm indeholder sandsynligvis 5 vægtprocent, eller mere aromatiske carbonhydrier, bestående af 4 til 6 leddede kondenserede ringe.]
- DE** Rückstände (Erdöl), Dampf-gekrackte, Heizöl schwer  
[Komplexe Kombination von Kohlenwasserstoffen, erhalten als Rückstandsfraction aus der Destillation der Produkte eines Dampfkrackverfahrens (einschließlich Dampfkracken zur Herstellung von Ethylen). Besteht vorherrschend aus ungesättigten Kohlenwasserstoffen mit Kohlenstoffzahlen vorherrschend größer als  $C_{14}$  und siedet über etwa  $260^{\circ}\text{C}$ . Dieser Lauf enthält wahrscheinlich 5 Gewichtsprozent oder mehr aromatische Kohlenwasserstoffe mit 4- bis 6 gliedrigen kondensierten Ringen.]
- EL** υπολειμματα (πετρελαίου), ατμοπυρολυμένα, βαρύ μαζούτ  
[Πολυπλοκός συνδυασμός υδρογονανθράκων που λαμβάνεται ως το υπολειμματικό κλάσμα από την απόσταξη των προϊόντων ατμοπυρόλυσης (συμπεριλαμβανομένης της ατμοπυρόλυσης για παραγωγή αιθυλενίου). Συνίσταται κυρίως από ακόρεστα υδρογονάνθρακες με αριθμό ατόμων άνθρακα σημαντικά μεγαλύτερο από  $C_{14}$  και βράζει πάνω από  $260^{\circ}\text{C}$  περίπου. Το ρεύμα αυτό συνήθως περιέχει 5 % κατά βάρος ή περισσότερο αρωματικούς υδρογονάνθρακες με 4 τετραμελείς, ως, εξαμελείς συμπυκνωμένους δακτύλιους.]
- EN** Residues (petroleum), steam cracked, Heavy Fuel oil  
[A complex combination of hydrocarbons obtained as the residual fraction from the distillation of the products of a steam cracking process (including steam cracking to produce ethylene). It consists predominantly of unsaturated hydrocarbons having carbon numbers predominantly greater than  $C_{14}$  and boiling above approximately  $260^{\circ}\text{C}$  ( $500^{\circ}\text{F}$ ). This stream is likely to contain 5 wt % or more of 4 to 6 membered condensed ring aromatic hydrocarbons.]
- FR** résidu (pétrole), vapocraquage, Fioul lourd  
[Combinaison complexe d'hydrocarbures produite comme fraction résiduelle dans la distillation du produit résultant d'un vapocraquage (y compris le vapocraquage destiné à la production d'éthylène). Se compose principalement d'hydrocarbures insaturés dont le nombre de carbones est en majeure partie supérieur à  $C_{14}$  et dont le point d'ébullition est approximativement supérieur à  $260^{\circ}\text{C}$ . Peut contenir 5 % ou plus en poids d'hydrocarbures aromatiques à noyaux condensés comportant de 4 à 6 cycles.]
- IT** residui (petrolio), crackizzati con vapor d'acqua, Olio combustibile denso  
[Combinazione complessa di idrocarburi ottenuta come frazione residua della distillazione dei prodotti di un processo di cracking con vapore acqueo (compreso il processo con vapor d'acqua per la produzione di etilene). È costituita prevalentemente da idrocarburi insaturi con numero di atomi di carbonio prevalentemente maggiore di  $C_{14}$  e punto di ebollizione superiore a  $260^{\circ}\text{C}$ . Questa combinazione può contenere il 5 % in peso o più di idrocarburi aromatici a nuclei condensati di 4-6 elementi.]
- NI** residuen (aardolie), stoomgekraakt, Stookolie  
[Een complexe verzameling koolwaterstoffen, verkregen als de residu-fractie van de destillatie van de producten van een stoomkraakproces (inclusief stoomkraken voor de productie van ethyleen). Bestaat voornamelijk uit onverzadigde koolwaterstoffen, overwegend groter dan  $C_{14}$ , kokend boven ongeveer  $260^{\circ}\text{C}$ . Deze stroom bevat waarschijnlijk 5 of meer gewichtsprocenten aromatische koolwaterstoffen met 4 tot 6 voudig gecondenseerde ringen.]
- PT** resíduos (petróleo), do steam cracking, Fuelóleo  
[Uma combinação complexa de hidrocarbonetos obtida como a fracção residual da destilação dos produtos de um processo de steam cracking (incluindo o steam cracking para produção de etileno). É constituída predominantemente por hidrocarbonetos insaturados com números de átomos de carbono predominantemente superiores a  $C_{14}$  e destilam a uma temperatura de aproximadamente  $260^{\circ}\text{C}$ . Este produto geralmente contém 5 % em peso ou mais de hidrocarbonetos aromáticos poliméricos com 4 a 6 membros.]

## NOTA H

- ES :** destilados (petróleo), fracción intermedia craqueada catalíticamente hidrosulfurada ; Fuelóleo pesado  
[Combinación compleja de hidrocarburos obtenida por tratamiento con hidrógeno de destilados intermedios craqueados catalíticamente para transformar el azufre orgánico en sulfuro de hidrógeno que se separa. Compuesta de hidrocarburos con un número de carbonos en su mayor parte dentro del intervalo de  $C_{11}$  a  $C_{30}$  y con un intervalo de ebullición aproximado de 205 °C a 450 °C. Contiene una proporción relativamente grande de hidrocarburos aromáticos tricíclicos.]
- DA :** destillater (råolie), hydroafsvovlede intermediære katalytisk krakkede ; Fuelolie  
[En sammensat blanding af carbonhydrider opnået ved at behandle intermediære katalytisk krakkede destillater med hydrogen for at omdanne organisk svovl til hydrogensulfid, som fjernes. Den består af carbonhydrider, overvejende  $C_{11}$  til og med  $C_{30}$ , med koginterval omtrent fra 205 °C til 450 °C. Den indeholder en forholdsvis stor del tricycliske, aromatiske carbonhydrider.]
- DE :** Destillate (Erdöl), hydrodesulfurierte intermediäre katalytisch gekrackte ; Heizöl schwer  
[Komplexe Kombination von Kohlenwasserstoffen, erhalten durch Behandeln von katalytisch gekrackten Destillaten mit Wasserstoff, um organischen Schwefel in Schwefelwasserstoff zu überführen, der entfernt wird. Besteht aus Kohlenwasserstoffen mit Kohlenstoffzahlen vorherrschend im Bereich von  $C_{11}$  bis  $C_{30}$  und siedet im Bereich von etwa 205 °C bis 450 °C. Enthält eine relativ große Menge tricyclischer aromatischer Kohlenwasserstoffe.]
- EL :** αποστάγματα (πετρελαίου), υδρογονοαποθειωμένα ενδιάμεσα καταλυτικά πυρολυμένα· Βαρύ μαζούτ  
[Πόλυπλοκος συνδιασμός υδρογονανθράκων που λαμβάνεται με καταργασία ενδιάμεσων καταλυτικά πυρολυμένων αποσταγμάτων με υδρογόνο για να μετατραπεί το οργανικό θείο σε υδρόθειο που απομακρύνεται. Συνίσταται από υδρογονάνθρακες με αριθμό ατόμων άνθρακα κυρίως στην περιοχή από  $C_{11}$  ως και  $C_{30}$  και με περιοχή βρασμού από 205 °C ως 450 °C περίπου. Περιέχει σχετικά μεγάλη αναλογία τρικυκλικών αρωματικών υδρογονανθράκων.]
- EN :** Distillates (petroleum), hydrodesulfurized intermediate catalytic cracked ; Heavy Fuel oil  
[A complex combination of hydrocarbons obtained by treating intermediate catalytic cracked distillates with hydrogen to convert organic sulfur to hydrogen sulfide which is removed. It consists of hydrocarbons having carbon numbers predominantly in the range of  $C_{11}$  through  $C_{30}$  and boiling in the range of approximately 205 °C to 450 °C (401 °F to 842 °F). It contains a relatively large proportion of tricyclic aromatic hydrocarbons.]
- FR :** distillats intermédiaires (pétrole), craquage catalytique, hydrodésulfuration ; Fioul lourd  
[Combinaison complexe d'hydrocarbures obtenue en traitant à l'hydrogène des distillats intermédiaires de craquage catalytique afin de convertir le soufre organique en hydrogène sulfure, qui est ensuite éliminé. Se compose d'hydrocarbures dont le nombre de carbones se situe en majorité dans la gamme  $C_{11}$ - $C_{30}$  et dont le point d'ébullition est compris approximativement entre 205 °C et 450 °C. Contient une proportion relativement importante d'hydrocarbures aromatiques tricycliques.]
- IT :** distillati (petrolio), intermedi idrodesolforati crackizzati cataliticamente ; Olio combustibile denso  
[Combinazione complessa di idrocarburi ottenuta trattando con idrogeno distillati intermedi crackizzati cataliticamente, per trasformare lo zolfo organico in idrogeno solforato che viene eliminato. È costituita da idrocarburi con numero di atomi di carbonio prevalentemente nell'intervallo  $C_{11}$ - $C_{30}$  e punto di ebollizione nell'intervallo 205 °C - 450 °C ca. Contiene una percentuale relativamente alta di idrocarburi aromatici triciclici.]
- NL :** destillaten (aardolie), met waterstof ontzwavelde katalytisch gekraakte tussenfractie ; Stookolie  
[Een complexe verzameling koolwaterstoffen die wordt verkregen door de behandeling van de katalytisch gekraakte destillaattussenfracties met waterstof om organisch zwavel om te zetten in waterstofsulfide dat verwijderd wordt. Bestaat uit koolwaterstoffen, overwegend  $C_{11}$  tot en met  $C_{30}$ , met een kooktraject van ongeveer 205 °C tot 450 °C. Bevat een relatief grote hoeveelheid tricyclische aromatische koolwaterstoffen.]
- PT :** destilados (petróleo), médios do cracking catalítico hidrogenodessulfurizados ; Fuelóleo  
[Uma combinação complexa de hidrocarbonetos obtida por tratamento de destilados médios do cracking catalítico com hidrogénio para converter enxofre orgânico em sulfureto de hidrogénio que é removido. É constituída por hidrocarbonetos com números de átomos de carbono predominantemente na gama de  $C_{11}$  até  $C_{30}$  e destila no intervalo de aproximadamente 205 °C a 450 °C. Contém uma proporção relativamente elevada de hidrocarbonetos aromáticos tricíclicos.]

NOTA H

- ES: destilados (petróleo), fracción pesada craqueada catalíticamente hidrodesulfurada; Fuelóleo pesado  
[Combinación compleja de hidrocarburos obtenida por tratamiento con hidrógeno de destilados pesados craqueados catalíticamente para transformar el azufre orgánico en sulfuro de hidrógeno que se separa. Compuesta de hidrocarburos con un número de carbonos en su mayor parte dentro del intervalo de  $C_{11}$  a  $C_{31}$  y con un intervalo de ebullición aproximado de 260 °C a 500 °C. Esta corriente es probable que contenga un 5 % en peso o más de hidrocarburos aromáticos con anillos condensados de 4 a 6 miembros.]
- DA: destillater (råolie), hydroafsvoviede tunge katalytisk krakkede; Fuelolie  
[En sammensat blanding af carbonhydrider opnået ved behandling af tunge katalytisk krakkede destillater med hydrogen for at omdanne organisk svovl til hydrogensulfid, som fjernes. Den består af carbonhydrider, overvejende  $C_{11}$  til og med  $C_{31}$ , med kogesinterval omtrent fra 260 °C til 500 °C. Denne strøm indeholder sandsynligvis 5 vægtprocent, eller mere, aromatiske carbonhydrider, bestående af 4- til 6-leddede kondenserede ringe.]
- DE: Destillate (Erdöl), hydrodesulfurierte schwere katalytisch gekrackte; Heizöl schwer  
[Komplexe Kombination von Kohlenwasserstoffen, erhalten durch Behandeln von schweren katalytisch gekrackten Destillaten mit Wasserstoff, um organischen Schwefel in Schwefelwasserstoff zu überführen, der entfernt wird. Besteht aus Kohlenwasserstoffen mit Kohlenstoffzahlen vorherrschend im Bereich von  $C_{11}$  bis  $C_{31}$  und siedet im Bereich von etwa 260 °C bis 500 °C. Dieser Lauf kann 5 Gewichtsprozent oder mehr aromatische Kohlenwasserstoffe mit 4- bis 6-gliedrigen kondensierten Ringen enthalten.]
- EL: αποστάγματα (πετρελαίου), υδρογονοαποδεδειγμένα βαρέα καταλυτικά πυρολυμένα· Βαρύ μαζούτ  
[Πολύπλοκος συνδυασμός υδρογονάνθρακων που λαμβάνεται με καταργασία βαρέων αποσταγμάτων καταλυτικής πυρόλυσης με υδρογόνο για τη μετατροπή του οργανικού θείου σε υδρόθειο το οποίο απομακρύνεται. Συνίσταται από υδρογονάνθρακες με αριθμό ατόμων άνθρακα κυρίως στην περιοχή από  $C_{11}$  ως  $C_{31}$  και δράζει στην περιοχή από 260 °C ως 500 °C περίπου. Το ρεύμα αυτό πιθανόν να περιέχει 5 % κατά βάρος ή περισσότερο αρωματικούς υδρογονάνθρακες τετραμελείς ως εξαμελείς συμπυκνωμένους δακτύλιους.]
- EN: Distillates (petroleum), hydrodesulfurized heavy catalytic cracked; Heavy Fuel oil  
[A complex combination of hydrocarbons obtained by treatment of heavy catalytic cracked distillates with hydrogen to convert organic sulfur to hydrogen sulfide which is removed. It consists of hydrocarbons having carbon numbers predominantly in the range of  $C_{11}$  through  $C_{31}$  and boiling in the range of approximately 260 °C to 500 °C (500 °F to 932 °F). This stream is likely to contain 5 wt-% or more of 4- to 6-membered condensed ring aromatic hydrocarbons.]
- FR: distillats lourds (pétrole), craquage catalytique, hydrodésulfuration; Fioul lourd  
[Combinaison complexe d'hydrocarbures obtenue en traitant à l'hydrogène des distillats lourds de craquage catalytique afin de convertir le soufre organique en hydrogène sulfuré, qui est ensuite éliminé. Se compose d'hydrocarbures dont le nombre de carbonos se situe en majorité dans la gamme  $C_{11}$ - $C_{31}$ , et dont le point d'ébullition est compris approximativement entre 260 °C et 500 °C. Peut contenir 5 % ou plus, en poids, d'hydrocarbures aromatiques à noyaux condensés comportant de 4 à 6 cycles.]
- IT: distillati (petrolio), idrodesolforati pesanti crackizzati cataliticamente; Olio combustibile denso  
[Combinazione complessa di idrocarburi ottenuta trattando con idrogeno i distillati pesanti del cracking catalitico per trasformare lo zolfo organico in idrogeno solforato che viene eliminato. È costituita da idrocarburi con numero di atomi di carbonio prevalentemente nell'intervallo  $C_{11}$ - $C_{31}$  e punto di ebollizione nell'intervallo 260 °C-500 °C ca. Questa corrente contiene probabilmente il 5 % o più di idrocarburi aromatici a nuclei condensati di 4-6 elementi.]
- NL: destillaten (aardolie), met waterstof ontzwavelde zware katalytisch gekraakte fractie; Stookolie  
[Een complexe verzameling koolwaterstoffen, verkregen uit de behandeling van zware katalytisch gekraakte destillaten met waterstof, waarbij organisch zwavel wordt omgezet in waterstofsulfide dat verwijderd wordt. Bestaat uit koolwaterstoffen, overwegend  $C_{11}$  tot en met  $C_{31}$ , met een kooktraject van ongeveer 260 °C tot 500 °C. Deze stroom bevat waarschijnlijk 5 of meer gewichtsprocenten aromatische koolwaterstoffen met 4- tot 6-voudig gecondenseerde ringen.]
- PT: destilados (petróleo), pesados do cracking catalítico hidrogenodessulfurizados; Fuelóleo  
[Uma combinação complexa de hidrocarbonetos obtida por tratamento de destilados pesados do cracking catalítico com hidrogénio para converter enxofre orgânico em sulfureto de hidrogénio que é removido. É constituída por hidrocarbonetos com números de átomos de carbono predominantemente na gama de  $C_{11}$  até  $C_{31}$ , e destila no intervalo de aproximadamente 260 °C a 500 °C. Este produto pode conter 5 % em peso ou mais de hidrocarbonetos aromáticos polinucleares com 4 a 6 membros.]

## NOTA H

- ES: residuos (petróleo), fracciones ligeras craqueadas a vapor; **Fuélóleo pesado**  
[Residuo complejo de la destilación de productos de un proceso de craqueo a vapor. Compuesto en su mayor parte de hidrocarburos aromáticos e insaturados con un número de carbonos mayor que C<sub>7</sub> y con un intervalo de ebullición aproximado de 101 °C a 555 °C.]
- DA: rester (råolie), dampkrakkede lette; **Fuelolie**  
[En sammensat remanens fra destillation af produkterne fra en dampkrakningsproces. Den består overvejende af aromatiske og umættede carbonhydrider, større end C<sub>7</sub>, med koginterval omtrent fra 101 °C til 555 °C.]
- DE: Rückstände (Erdöl), Dampf- gekrackte leichte; **Heizöl schwer**  
[Komplexer Rückstand aus der Destillation von Produkten aus einem Dampfkrackverfahren. Besteht vorherrschend aus aromatischen und ungesättigten Kohlenwasserstoffen mit Kohlenstoffzahlen größer als C<sub>7</sub> und siedet im Bereich von etwa 101 °C bis 555 °C.]
- EL: υπολείμματα (πετρελαίου), ελαφρά ατμοπυρλούμενα· **Βαρύ μαζούτ**  
[Πολύπλοκο υπόλειμμα από την απόσταξη των προϊόντων ατμοπυρόλυσης. Συνίσταται κυρίως από αρωματικούς και ακόρεστους υδρογονάνθρακες με αριθμό ατόμων άνθρακα μεγαλύτερο από C<sub>7</sub> και με περιοχή βρασμού από 101 °C ως 555 °C περίπου.]
- FN: Residues (petroleum), steam-cracked light; **Heavy Fuel oil**  
[A complex residuum from the distillation of the products from a steam-cracking process. It consists predominantly of aromatic and unsaturated hydrocarbons having carbon numbers greater than C<sub>7</sub> and boiling in the range of approximately 101 °C to 555 °C (214 °F to 1 030 °F).]
- FR: résidus légers de vapocraquage (pétrole); **Fioul lourd**  
[Résidu complexe de la distillation des produits résultant d'un vapocraquage. Se compose principalement d'hydrocarbures aromatiques et insaturés dont le nombre de carbones est supérieur à C<sub>7</sub> et dont le point d'ébullition varie approximativement entre 101 °C et 555 °C.]
- IT: residui (petrolio), leggeri crackizzati con vapore; **Olio combustibile denso**  
[Residuo complesso proveniente dalla distillazione dei prodotti di un processo di cracking con vapore. È costituito principalmente da idrocarburi aromatici e insaturi con numero di atomi di carbonio superiore a C<sub>7</sub> e punto di ebollizione nell'intervallo 101 °C - 555 °C ca.]
- NL: residuen (aardolie), stoomgekraakte lichte; **Stookolie**  
[Een complex residu, afkomstig uit de destillatie van de producten uit een stoomkraakproces. Bestaat voornamelijk uit aromatische en onverzadigde koolwaterstoffen, overwegend groter dan C<sub>7</sub>, met een kooktraject van ongeveer 101 °C tot 555 °C.]
- PT: resíduos (petróleo), leves do steam-cracking; **Fuelóleo**  
[Um residuo complexo da destilação dos produtos de um processo de steam-cracking. É constituído predominantemente por hidrocarbonetos insaturados e aromáticos com números de átomos de carbono superiores a C<sub>7</sub> e destila no intervalo de aproximadamente 101 °C a 555 °C.]

## NOTA H

- ES petroleo combustible, pesado, con gran proporción de azufre ; Fuéloleo pesado  
[Combinación compleja de hidrocarburos obtenida por la destilación del petróleo crudo. Compuesta fundamentalmente de hidrocarburos alifáticos, aromáticos y cicloalifáticos con un número de carbonos en su mayor parte superior a  $C_{25}$  y con un intervalo de ebullición aproximado por encima de 400 °C]
- DA brændselolie, tung, højt svovlindhold ; Fuelolie  
[En sammensat blanding af carbonhydrider opnået ved destillation af rå olie. Den består overvejende af aliphatiske, aromatiske og cycloaliphatiske carbonhydrider, overvejende større end  $C_{25}$ , der koger højere end omtrent over 400 °C]
- DE Brennstoff, schwer, hochschwefelhaltig ; Heizöl schwer  
[Komplexe Kombination von Kohlenwasserstoffen, die man durch Destillation von rohem Erdöl erhält. Besteht vorwiegend aus aliphatischen, aromatischen und cycloaliphatischen Kohlenwasserstoffen mit Kohlenstoffzahlen vorwiegend höher als  $C_{25}$  und siedet über etwa 400 °C]
- EL υπολείμματα (πετρελαίου), κενού, ελαφρά· Βαρύ μαζούτ  
[Πολυπλοκό υπόλειμμα από την απόσταξη σε κενό του υπολείμματος ατμοσφαιρικής απόσταξης αργού πετρελαίου. Συνίσταται κυρίως από υδρογονάνθρακες με αριθμό ατόμων άνθρακα σημαντικά μεγαλύτερο από  $C_{25}$  και βράζει πάνω από 400 °C περίπου.]
- EN Fuel oil, heavy, high-sulfur, Heavy Fuel oil  
[A complex combination of hydrocarbons obtained by the distillation of crude petroleum. It consists predominantly of aliphatic, aromatic and cycloaliphatic hydrocarbons having carbon numbers predominantly higher than  $C_{25}$  and boiling above approximately 400 °C (752 °F)]
- FR fuel-oil lourd à haute teneur en soufre, Fioul lourd  
[Combinaison complexe d'hydrocarbures obtenue par distillation du pétrole brut. Se compose principalement d'hydrocarbures aliphatiques, aromatiques et cycloaliphatiques dont le nombre de carbones est en majeure partie supérieur à  $C_{25}$  et dont le point d'ébullition est approximativement supérieur à 400 °C]
- IT olio combustibile, pesante, alto livello di zolfo, Olio combustibile denso  
[Combinazione complessa di idrocarburi ottenuti per distillazione di petrolio grezzo. È costituita prevalentemente da idrocarburi alifatici, aromatici e cicloalifatici con numero di atomi di carbonio prevalentemente maggiore di  $C_{25}$  e con punto di ebollizione superiore a 400 °C ca.]
- NL stookolie, zware, hoog zwavelgehalte, Stookolie  
[Een complexe verzameling koolwaterstoffen die wordt verkregen door de destillatie van ruwe aardolie. Bestaat voornamelijk uit alifatische, aromatische en cyclo-alifatische-koolwaterstoffen, overwegend groter dan  $C_{25}$ , en kokend boven ongeveer 400 °C]
- PT fuel-oil, pesado, de alto teor em enxofre, Fuelóleo  
[Uma combinação complexa de hidrocarbonetos obtida pela destilação de petróleo bruto. É constituída predominantemente por hidrocarbonetos alifáticos, aromáticos e cicloalifáticos com números de átomos de carbono predominantemente superiores a  $C_{25}$  e destila acima de aproximadamente 400 °C]

## NOTA H

- ES destilados (petróleo), fracción intermedia craqueada catalíticamente, degradada térmicamente, Fuelóleo pesado  
[Combinación compleja de hidrocarburos producida por la destilación de productos de un proceso de craqueo catalítico que se han utilizado como fluido de transferencia de calor. Compuesta en su mayor parte de hidrocarburos con un intervalo de ebullición aproximado de 220 °C a 450 °C. Esta corriente es probable que contenga compuestos orgánicos de azufre.]
- DA · destillater (råolie), intermediære katalytisk krakkede, termisk nedbrudte, Fuelolie  
[En sammensat blanding af carbonhydrider, fremstillet ved destillationen af produkter fra en katalytisk krakningsproces, som har været brugt som en varmeoverførselsvæske. Den består overvejende af carbonhydrider med kogesinterval omtrent fra 220 °C til 450 °C. Denne strøm indeholder sandsynligvis organiske svovlforbindelser.]
- DE · Destillate (Erdöl), intermediäre katalytisch gekrackte, thermisch abgebaut; Heizöl schwer  
[Komplexe Kombination von Kohlenwasserstoffen, hergestellt durch Destillation von Produkten aus einem katalytischen Crackverfahren, das als Wärmetransfer-Flüssigkeit benutzt wurde. Besteht vorherrschend aus Kohlenwasserstoffen und siedet im Bereich von etwa 220 °C bis 450 °C. Dieser Lauf enthält wahrscheinlich organische Schwefelverbindungen.]
- EL αποστάγματα (πετρελαίου), ενδιάμεσα καταλυτικά πυρολυμένα, θερμικώς υποβαθμισμένα· Βαρύ μαζούτ  
[Πολύπλοκος συνδυασμός υδρογονανθράκων που παράγεται με την απόσταξη προϊόντων καταλυτικής πυρόλυσης, τα οποία έχουν χρησιμοποιηθεί σαν ρευστό μέσο μεταφοράς θερμότητας. Συνίσταται κυρίως από υδρογονανθράκες με περιοχή βρασμού από 220 °C ως 450 °C περίπου. Το ρεύμα αυτό είναι πιθανό να περιέχει οργανικές ενώσεις θείου.]
- EN Distillates (petroleum), intermediate catalytic cracked, thermally degraded, Heavy Fuel oil  
[A complex combination of hydrocarbons produced by the distillation of products from a catalytic cracking process which has been used as a heat transfer fluid. It consists predominantly of hydrocarbons boiling in the range of approximately 220 °C to 450 °C (428 °F to 842 °F). This stream is likely to contain organic sulfur compounds.]
- FR distillats intermédiaires (pétrole), craquage catalytique, dégradation thermique, Fioul lourd  
[Combinaison complexe d'hydrocarbures obtenue par distillation des produits résultant d'un craquage catalytique et qui a été utilisée comme fluide caloporteur. Se compose principalement d'hydrocarbures dont le point d'ébullition est compris approximativement entre 220 °C et 450 °C. Peut contenir des composés organiques soufrés.]
- IT distillati (petrolio), intermedi da cracking catalitico, degradati termicamente, Olio combustibile denso  
[Combinazione complessa di idrocarburi prodotta dalla distillazione di prodotti da un processo di cracking catalitico che è stato usato come fluido di scambio di calore. È costituita prevalentemente da idrocarburi con punto di ebollizione nell'intervallo 220 °C a 450 °C ca. Questa corrente può contenere probabilmente composti organici dello zolfo.]
- NL · destillaten (aardolie), katalytisch gekraakte middenfracties, thermisch gedesintegreerd, Stookolie  
[Een complexe verzameling koolwaterstoffen die wordt gevormd door de destillatie van produkten uit een katalytisch kraakproces en die is gebruikt als een warmte-overdrachtsvloeistof. Bestaat voornamelijk uit koolwaterstoffen met een kooktraject van ongeveer 220 °C tot 450 °C. Deze stroom bevat waarschijnlijk organische zwavelverbindingen.]
- PT · destilados (petróleo), intermédios do cracking catalítico, degradados termicamente, Fuelóleo  
[Uma combinação complexa de hidrocarbonetos produzida pela destilação de produtos de um processo de cracking catalítico que foi usada como fluido térmico. É constituída predominantemente por hidrocarbonetos que destilam no intervalo de aproximadamente 220 °C a 450 °C. Esta fracção geralmente contém compostos orgânicos de enxofre.]

## NOTA

- ES aceites residuales (petróleo); Fuelóleo pesado  
[Combinación compleja de hidrocarburos, compuestos de azufre y compuestos orgánicos con metales obtenida como el residuo de procesos de craqueo para el fraccionamiento en la refinería. Produce un aceite final con una viscosidad por encima de 2cSt a 100 °C.]
- DA restolier (råolie); Fuelolie  
[En sammensat blanding af carbonhydrider, svovlforbindelser og metalholdige organiske forbindelser opnået som resten fra raffinierfraktionerings-krakningsprocesser. Den danner en færdig olie med viskositet over 2cSt. ved 100 °C.]
- DE Rückstandsöle (Erdöl); Heizöl schwer  
[Komplexe Kombination von Kohlenwasserstoffen, Schwefelverbindungen und Metall-enthaltenden organischen Verbindungen, die man als Rückstand aus Raffinerie-Fraktionier-Krackverfahren erhält. Ergibt ein Fertigöl mit einer Viskosität größer als 2cSt bei 100 °C.]
- EL υπολειμματικά έλαια (πετρελαίου): Βαρύ μαζούτ  
[Πολύπλοκος συνδυασμός υδρογονανθράκων ενώσεων θείου και οργανικών ενώσεων που περιέχουν μέταλλο που λαμβάνεται σαν το υπόλειμμα κλασμάτωσης πυρόλυσης σε διυλιστήριο. Περιέχει έτοιμο έλαιο με ιξώδες άνω των 2cSt 100 °C περίπου.]
- EN Residual oils (petroleum); Heavy Fuel oil  
[A complex combination of hydrocarbons, sulfur compounds and metal-containing organic compounds obtained as the residue from refinery fractionation cracking processes. It produces a finished oil with a viscosity above 2cSt at 100 °C.]
- FR huiles résiduelles (pétrole); Fioul lourd  
[Combinaison complexe d'hydrocarbures, de composés soufrés et de composés organiques métallifères obtenue comme résidu dans les procédés de raffinage par craquage et fractionnement. Donne une huile-produit fini de viscosité supérieure à 2cSt à 100 °C.]
- IT: olii residui (petrolio); Olio combustibile denso  
[Combinazione complessa di idrocarburi, composti di zolfo e composti organici contenenti metalli, ottenuta come residuo da processi di frazionamento di raffineria mediante cracking. Produce un olio finito con una viscosità superiore a 2cSt a 100 °C.]
- NL: residu-oliën (aardolie); Stookolie  
[Een complexe verzameling koolwaterstoffen, zwavelverbindingen en metaalhoudende organische verbindingen, verkregen als het residu van een fractioneringskraakproces in een raffinaderij. Het vormt een voltooide olie met een viscositeit boven 2cSt. bij 100 °C.]
- PT: Óleos residuais (petróleo); Fuelóleo  
[Uma combinação complexa de hidrocarbonetos, compostos de enxofre e compostos orgânicos contendo metais obtida como o residuo de processos de cracking de fraccionamento de uma refinaria. Produz um óleo acabado com uma viscosidade superior a 2cSt a 100 °C.]

## NOTA H

- ES: residuos (petróleo), fraccionador del reformador catalítico; Fuelóleo pesado  
[Combinación compleja de hidrocarburos producida como la fracción residual de la destilación del producto de un proceso de reformado catalítico. Compuesta fundamentalmente de hidrocarburos aromáticos con un número de carbonos en su mayor parte dentro del intervalo de  $C_{10}$  a  $C_{25}$  y con un intervalo de ebullición aproximado de 160 °C a 400 °C. Esta corriente es probable que contenga un 5 % en peso o más de hidrocarburos aromáticos con anillos condensados de 4 a 6 miembros.]
- DA: rester (råolie), katalytisk reformer-fraktionator-; Fuelolie  
[En sammensat blanding af carbonhydrider fremstillet som restfraktionen fra destillation af produkterne fra en katalytisk reformeringsproces. Den består af overvejende aromatiske carbonhydrider, overvejende  $C_{10}$  til og med  $C_{25}$ , med koginterval omtrent fra 160 °C til 400 °C. Denne strøm indeholder sandsynligvis 5 vægtprocent, eller mere, aromatiske carbonhydrider, bestående af 4- til 6-leddede kondenserende ringe.]
- DE: Rückstände (Erdöl), katalytisch reformierte Fraktionator-; Heizöl schwer  
[Komplexe Kombination von Kohlenwasserstoffen, hergestellt als Rückstandsfraction durch Destillation des Produktes aus einem katalytischen Reformingverfahren. Besteht aus vorherrschend aromatischen Kohlenwasserstoffen mit Kohlenstoffzahlen vorherrschend im Bereich von  $C_{10}$  bis  $C_{25}$  und siedet im Bereich von etwa 160 °C bis 400 °C. Dieser Lauf kann 5 Gewichtsprozent oder mehr aromatische Kohlenwasserstoffe mit 4- oder 6-gliedrigen kondensierten Ringen enthalten.]
- EL: υπολείμματα (πετρελαίου), μονάδα κλασμάτωσης καταλυτικού αναμορφωτήρα· Βαρύ μαζούτ  
[Πολύπλοκος συνδυασμός υδρογονανθράκων που παράγεται σαν το υπολειμματικό κλάσμα απόσταξης του προϊόντος καταλυτικής αναμόρφωσης. Συνίσταται κυρίως από αρωματικούς υδρογονάνθρακες με αριθμό ατόμων άνθρακα κυρίως στην περιοχή από  $C_{10}$  ως και  $C_{25}$  και με περιοχή βρασμού από 160 °C ως 400 °C περίπου. Το ρεύμα αυτό είναι πιθανό να περιέχει 5 % κατά βάρος ή περισσότερο, αρωματικούς υδρογονάνθρακες με τετραμελείς ως εξαιμελείς συμπυκνωμένους δακτύλιους.]
- EN: Residues (petroleum), catalytic reformer fractionator; Heavy Fuel oil  
[A complex combination of hydrocarbons produced as the residual fraction from distillation of the product from a catalytic reforming process. It consists of predominantly aromatic hydrocarbons having carbon numbers predominantly in the range of  $C_{10}$  through  $C_{25}$  and boiling in the range of approximately 160 °C to 400 °C (320 °F to 725 °F). This stream is likely to contain 5 wt. % or more of 4- or 6-membered condensed ring aromatic hydrocarbons.]
- FR: résidus de fractionnement (pétrole), reformage catalytique; Fioul lourd  
[Combinaison complexe d'hydrocarbures obtenue comme fraction résiduelle de la distillation du produit résultant d'un reformage catalytique. Se compose d'hydrocarbures en majorité aromatiques dont le nombre de carbones se situe principalement dans la gamme  $C_{10}$ - $C_{25}$ , et dont le point d'ébullition est compris approximativement entre 160 °C et 400 °C. Peut contenir 5 % ou plus, en poids, d'hydrocarbures aromatiques à noyaux condensés comportant de 4 à 6 cycles.]
- IT: residui (petrolio), frazionatore di reforming catalitico; Olio combustibile denso  
[Combinazione complessa di idrocarburi ottenuta come frazione residua della distillazione dei prodotti provenienti da un processo di reforming catalitico. È costituita prevalentemente da idrocarburi aromatici con numero di atomi di carbonio prevalentemente nell'intervallo  $C_{10}$ - $C_{25}$  e punto di ebollizione nell'intervallo 160 °C-400 °C ca. Questa frazione può probabilmente contenere il 5 % in peso o più di idrocarburi aromatici a nuclei condensati di 4-6 elementi.]
- NL: residuen (aardolie), katalytische reformator-fractioneerder; Stookolie  
[Een complexe verzameling koolwaterstoffen, verkregen als de residu-fractie bij destillatie van het produkt van een katalytisch reformeringsproces. Bestaat hoofdzakelijk uit aromatische koolwaterstoffen, overwegend  $C_{10}$  tot en met  $C_{25}$ , met een kooktraject van ongeveer 160 °C tot 400 °C. Deze stroom bevat waarschijnlijk 5 of meer gewichtsprocenten aromatische koolwaterstoffen met 4- tot 6-voudig gecondenseerde ringen.]
- PT: resíduos (petróleo), do fraccionador do reformer catalítico; Fuelóleo  
[Uma combinação complexa de hidrocarbonetos produzida como a fracção residual da destilação do produto de um processo de reforming catalítico. É constituída predominantemente por hidrocarbonetos aromáticos com números de átomos de carbono predominantemente na gama de  $C_{10}$  até  $C_{25}$  e destila no intervalo de aproximadamente 160 °C a 400 °C. Esta fracção pode conter 5 % em peso ou mais de hidrocarbonetos aromáticos polinucleares com 4 a 6 membros.]

## NOTA H

## ES petróleo , Crudo

[Combinación compleja de hidrocarburos. Compuesta en su mayor parte de hidrocarburos alifáticos, alicíclicos y aromáticos. También puede contener cantidades pequeñas de nitrógeno, oxígeno y compuestos de azufre. Esta categoría incluye petróleos ligeros, medios y pesados, así como los aceites extraídos de arenas impregnadas de alquitrán. Materiales hidrocarbonados que requieren cambios químicos mayores para su recuperación o conversión en materias primas para refinación de petróleo tales como aceites de esquisto crudos, aceites de esquisto enriquecidos y combustibles líquidos de hulla que no se incluyen en esta definición.]

## DA råolie , Råolie

[En sammensat blanding af carbonhydrider. Den består overvejende af aliphatiske, alicycliske og aromatiske carbonhydrider. Den kan også indeholde små mængder af nitrogen, oxygen og svovlforbindelser. Denne kategori omfatter lette, middeltunge og tunge råolier, såvel som olier ekstraherede fra tjæresand. Carbonhydridholdige materialer, der kræver større kemiske forandringer for deres udvinding eller omdannelse til råolieraffineringsføde såsom rå skiferolier, oprensede skiferolier og flydende kulbrændsel er ikke medtaget i denne beskrivelse.]

## DE Erdöl , Rohöl

[Komplexe Kombination von Kohlenwasserstoffen. Besteht in erster Linie aus aliphatischen, alicyclischen und aromatischen Kohlenwasserstoffen. Kann auch geringe Mengen Stickstoff, Sauerstoff und Schwefelverbindungen enthalten. Diese Kategorie schließt Leicht-, Mittel- und Schweröle ein, auch aus Teersanden extrahierte Öle. Kohlenwasserstoffhaltige Materialien, die zu ihrer Gewinnung der Konversion zu Erdölraffineriegrundstoffen größere chemische Veränderungen erfordern wie rohe Schieferöle aufbereitete Schieferole und flüssige Kohlenbrennstoffe sind in dieser Definition nicht enthalten.]

## FI πετρέλαιο Αργό πετρέλαιο

[Πολυπλοκός συνδυασμός υδρογονανθράκων. Συνίσταται κυρίως από αλειφατικούς, αλκυκλικούς και αρωματικούς υδρογονανθράκες. Μπορεί επίσης να περιέχει μικρές ποσότητες ενώσεων αζώτου, θείου και οξυγόνου. Αυτή η κατηγορία συμπεριλαμβάνει ελαφρά, μέσα και βαρέα πετρέλαια καθώς και πετρέλαια που εξάγονται από πισσούχους άμμους. Δεν συμπεριλαμβάνονται σε αυτό τον ορισμό υδρογονανθρακούχα υλικά που απαιτούν μεγάλες χημικές αλλαγές για την ανάκτησή τους ή την μετατροπή τους σε πρώτες υλές τροφοδοσίας διυλιστηρίων όπως αργά πετρέλαια σχιστολιθίων αναβαθμισμένα πετρέλαια σχιστολιθίων και υγρά καύσιμα ανθράκων.]

## EN Petroleum , Crude oil

[A complex combination of hydrocarbons. It consists predominantly of aliphatic, alicyclic and aromatic hydrocarbons. It may also contain small amounts of nitrogen, oxygen and sulfur compounds. This category encompasses light, medium, and heavy petroleum, as well as the oils extended from tar sands. Hydrocarbonaceous materials requiring major chemical changes for their recovery or conversion to petroleum refinery feedstocks such as crude shale oils, upgraded shale oils and liquid coal fuels are not included in this definition.]

## FR pétrole , Pétrole brut

[Combinaison complexe d'hydrocarbures. Se compose principalement d'hydrocarbures aliphatiques, alicycliques et aromatiques. Peut aussi contenir de petites quantités de composés d'azote, d'oxygène et de soufre. Cette catégorie comprend les pétroles légers, moyens et lourds, ainsi que les huiles extraites des sables asphaltiques. Elle n'inclut pas les matières hydrocarbonées dont la récupération ou la conversion en charges de raffinage du pétrole impose des transformations chimiques importantes, comme les huiles de schiste brutes ou valorisées, ou les liquides combustibles issus du charbon.]

## IT petrolio ; Petrolio grezzo

[Combinazione complessa di idrocarburi. È costituita prevalentemente da idrocarburi alifatici, aliciclici ed aromatici. Può anche contenere piccole quantità di composti azotati, ossigenati e solforati. Questa categoria comprende le frazioni leggere, medie e pesanti del petrolio, nonché gli oli estratti dalle sabbie catramifere. Non sono inclusi in questa definizione i materiali idrocarburi per i cui recupero, o per la cui conversione a materie prime da alimentare alla raffinazione si rendono necessarie modifiche chimiche di carattere sostanziale, come è il caso degli oli di schisto grezzi o arnechiti e dei combustibili liquidi derivati dal carbone.]

## NL aardolie , Ruwe aardolie

[Een complexe verzameling van koolwaterstoffen. Bestaat voornamelijk uit alifatische, alicyclische en aromatische koolwaterstoffen. Kan ook kleine hoeveelheden stikstof, zuurstof en zwavelverbindingen bevatten. Deze categorie omvat lichte, middelzware en zware aardolien, alsmede olien gewonnen uit teerzand. Koolwaterstofmaterialen die ingrijpende chemische veranderingen vereisen om te worden gewonnen of te worden omgezet in grondstoffen voor aardolieraffinage zoals ruwe schalieolie, verbeterde schalieolie en vloeibare kolenbrandstof, zijn niet opgenomen in deze definitie.]

## PT petróleo , Petróleo bruto

[Uma combinação complexa de hidrocarbonetos. É constituída predominantemente por hidrocarbonetos alifáticos, alíciclicos e aromáticos. Pode conter também pequenas quantidades de compostos de azoto, de enxofre e de oxigénio. Esta categoria compreende os petróleos leve, médio e pesado bem como os extraídos de areias asfálticas. Não estão incluídos nesta definição materiais hidrocarboníferos que requerem modificações químicas substanciais para recuperação ou conversão em matérias primas petrolíferas tais como óleos de xistos betuminosos brutos e processados e combustíveis líquidos de carvão.]

## NOTA H

- ES :** destilados (petróleo), fracción parafínica ligera ; Aceite de base sin refinar o ligeramente refinado  
[Combinación compleja de hidrocarburos producida por destilación a vacío del residuo de la destilación atmosférica de petróleo crudo. Compuesta de hidrocarburos con un número de carbonos en su mayor parte dentro del intervalo de  $C_{11}$  a  $C_{30}$  y produce un aceite final con una viscosidad de menos de 19cSt a 40 °C (100 SUS a 100 °F). Contiene una proporción relativamente grande de hidrocarburos alifáticos saturados presentes normalmente en este intervalo de destilación del petróleo crudo.]
- DA :** destillater (råolie), lette paraffin- ; Uraffineret eller let raffineret baseolie  
[En sammensat blanding af carbonhydrider fremstillet ved vakuumdestillation af remanensen fra atmosfærisk destillation af råolie. Den består af carbonhydrider, overvejende  $C_{11}$  til og med  $C_{30}$ , og danner en færdig olie med en viskositet på mindre end 19cSt ved 40 °C. Den indeholder en forholdsvis stor del mættede, aliphatiske carbonhydrider normalt tilstede i dette råoliedestillationsinterval.]
- DE :** Destillate (Erdöl), leichte paraffinhaltige ; Nicht oder leicht raffiniertes Grundöl  
[Komplexe Kombination von Kohlenwasserstoffen, hergestellt durch Vakuumdestillation des Rückstandes aus der offenen Destillation von Rohöl. Besteht aus Kohlenwasserstoffen mit Kohlenstoffzahlen vorherrschend im Bereich von  $C_{11}$  bis  $C_{30}$  und ergibt Fertigöl mit einer Viskosität von weniger als 19cSt bei 40 °C. Enthält einen relativ großen Gehalt an gesättigten aliphatischen Kohlenwasserstoffen, die normalerweise in diesem Destillationsbereich von Rohöl vorhanden sind.]
- EL :** αποστάγματα (πετρελαίου), ελαφρά παραφινικά· Μη επεξεργασμένο ή ελαφρώς επεξεργασμένο βασικό ορυκτέλαιο  
[Πολύπλοκος συνδυασμός υδρογονανθράκων που παράγεται με απόσταξη σε κενό του υπολείμματος της ατμοσφαιρικής απόσταξης αργού πετρελαίου. Συνίσταται από υδρογονάνθρακες με αριθμό ατόμων άνθρακα κυρίως στην περιοχή από  $C_{11}$  ως και  $C_{30}$  και παράγει τελικό έλαιο με ιξώδες μικρότερο από 19cSt στους 40 °C. Περιέχει σχετικά μεγάλη αναλογία κορεσμένων αλειφατικών υδρογονανθράκων, που κανονικά υπάρχουν σε αυτή την περιοχή απόσταξης του αργού πετρελαίου.]
- EN :** Distillates (petroleum), light paraffinic ; Unrefined or mildly refined baseoil  
[A complex combination of hydrocarbons produced by vacuum distillation of the residuum from atmospheric distillation of crude oil. It consists of hydrocarbons having carbon numbers predominantly in the range of  $C_{11}$  through  $C_{30}$  and produces a finished oil with a viscosity of less than 100 SUS at 100 °F (19cSt at 40 °C). It contains a relatively large proportion of saturated aliphatic hydrocarbons normally present in this distillation range of crude oil.]
- FR :** distillats paraffiniques légers (pétrole) ; Huile de base non raffinée ou légèrement raffinée  
[Combinaison complexe d'hydrocarbures obtenue par distillation sous vide du résidu de distillation atmosphérique du pétrole brut. Se compose d'hydrocarbures dont le nombre de carbones se situe principalement dans la gamme  $C_{11}$ - $C_{30}$  et fournit une huile-produit fini de viscosité inférieure à 19 cSt à 40 °C. Contient une proportion relativement importante d'hydrocarbures aliphatiques saturés, dont la présence dans cet intervalle de distillation du pétrole brut est normale.]
- IT :** distillati (petrolio), frazioni paraffiniche leggere ; Olio base non raffinato o mediamente raffinato  
[Combinazione complessa di idrocarburi prodotta per distillazione sotto vuoto del residuo della distillazione atmosferica del petrolio grezzo. È costituita da idrocarburi con numero di atomi di carbonio prevalentemente nell'intervallo  $C_{11}$ - $C_{30}$  e produce un olio finito di viscosità inferiore a 19cSt a 40 °C. Contiene una percentuale relativamente alta di idrocarburi alifatici saturi che sono normalmente presenti in questo intervallo di distillazione del grezzo.]
- NL :** destillaten (aardolie), lichte paraffinehoudende ; Niet of licht geraffineerde basisolie  
[Een complexe verzameling koolwaterstoffen verkregen door vacuümdestillatie van het residu van de atmosferische destillatie van ruwe olie. Bestaat uit koolwaterstoffen, overwegend  $C_{11}$  tot en met  $C_{30}$ , en vormt een voltooiide olie met een viscositeit van minder dan 19cSt bij 40 °C. Bevat een relatief grote hoeveelheid alifatische koolwaterstoffen die normaal aanwezig zijn in dit destillatietraject van ruwe olie.]
- PT :** destilados (petróleo), parafínicos leves ; Óleo-base não refinado ou semi-refinado  
[Uma combinação complexa de hidrocarbonetos produzida pela destilação de vácuo do residuo da destilação atmosférica de petróleo bruto. É constituída por hidrocarbonetos com números de átomos de carbono predominantemente na gama de  $C_{11}$  até  $C_{30}$  e produz um óleo acabado com uma viscosidade inferior a 19cSt a 40 °C. Contém uma proporção relativamente elevada de hidrocarbonetos alifáticos saturados normalmente presentes neste intervalo de destilação do petróleo bruto.]

## NOTA H

- ES destilados (petróleo), fracción nafténica pesada ; Aceite de base sin refinar o ligeramente refinado  
[Combinación compleja de hidrocarburos producida por destilación a vacío de residuo de la destilación atmosférica de petróleo crudo. Compuesta de hidrocarburos con un número de carbonos en su mayor parte dentro del intervalo de  $C_{20}$  a  $C_{30}$  y produce un aceite final con una viscosidad al menos de 19cSt a 40 °C (100 SUS a 100 °F). Contiene relativamente pocas parafinas normales.]
- DA destillater (råolie), tunge naphthen- ; Uraffineret eller let raffineret baseolie  
[En sammensat blanding af carbonhydrier fremstillet ved vakuumdestillation af remanensen fra atmosfærisk destillation af råolie. Den består af carbonhydrier, overvejende  $C_{20}$  til og med  $C_{30}$ , og danner en færdig olie med en viskositet på mindst 19cSt ved 40 °C. Den indeholder forholdsvis få normalparaffiner.]
- DE Destillate (Erdöl), schwere naphthenhaltige ; Nicht oder leicht raffiniertes Grundöl  
[Komplexe Kombination von Kohlenwasserstoffen, hergestellt durch Vakuumdestillation des Rückstandes aus der offenen Destillation von Rohöl. Besteht aus Kohlenwasserstoffen mit Kohlenstoffzahlen vorherrschend im Bereich von  $C_{20}$  bis  $C_{30}$  und ergibt ein Fertigöl mit einer Viskosität von wenigstens 19cSt bei 40 °C. Enthält relativ wenig normale Paraffine.]
- EL αποσταγμάτα (πετρελαιο), βαρέα ναφθενικά: Μη επεξεργασμένο ή ελαφρώς επεξεργασμένο βασικό ορυκτέλαιο  
[Πολυπλοκός συνδυασμός υδρογονανθράκων που παράγεται με απόσταξη στο κενό του υπολείμματος της ατμοσφαιρικής απόσταξης αργού πετρελαιο. Συνίσταται από υδρογονάνθρακες με αριθμό ατόμων άνθρακα κυρίως στην περιοχή από  $C_{20}$  ως και  $C_{30}$  και παραγεί τελικό έλαιο με ιξώδες τουλάχιστο 19cSt σε 40 °C. Περιέχει σχετικά λίγες κανονικές παραφίνες.]
- EN Distillates (petroleum), heavy naphthenic , Unrefined or mildly refined baseoil  
[A complex combination of hydrocarbons produced by vacuum distillation of the residuum from atmospheric distillation of crude oil. It consists of hydrocarbons having carbon numbers predominantly in the range of  $C_{20}$  through  $C_{30}$  and produces a finished oil with a viscosity of at least 100 SUS at 100 °F (19cSt at 40 °C). It contains relatively few normal paraffins.]
- FR distillats naphténiques lourds (pétrole) , Huile de base non raffinée ou légèrement raffinée  
[Combinaison complexe d'hydrocarbures obtenue par distillation sous vide du résidu de distillation atmosphérique du pétrole brut. Se compose d'hydrocarbures dont le nombre de carbones se situe principalement dans la gamme  $C_{20}$ - $C_{30}$ , et fournit une huile-produit fini de viscosité supérieure à 19 cSt à 40 °C. Contient relativement peu de paraffines normales.]
- IT distillati (petrolio), frazioni nafteniche pesanti , Olio base non raffinato o mediamente raffinato  
[Combinazione complessa di idrocarburi prodotta per distillazione sotto vuoto del residuo della distillazione atmosferica del petrolio grezzo. È costituita da idrocarburi aventi numero di atomi di carbonio prevalentemente nell'intervallo  $C_{20}$ - $C_{30}$  e produce un olio finito con viscosità pari ad almeno 19 cSt a 40 °C. Contiene relativamente poche paraffine normali.]
- NL destillaten (aardolie), zware naftenhoudende , Niet of licht geraffineerde basisolie  
[Een complexe verzameling koolwaterstoffen verkregen door vacuumdestillatie van het residu van de atmosferische destillatie van ruwe olie. Bestaat uit koolwaterstoffen, overwegend  $C_{20}$  tot en met  $C_{30}$ , en vormt een voltioide olie met een viscositeit van minstens 19 cSt bij 40 °C. Bevat relatief weinig normale paraffinen.]
- PT destilados (petrólio), nafténicos pesados , Óleo-base não refinado ou semi-refinado  
[Uma combinação complexa de hidrocarbonetos produzida pela destilação de vácuo do residuo da destilação atmosférica de petróleo bruto. É constituída por hidrocarbonetos com números de átomos de carbono predominantemente na gama de  $C_{20}$  até  $C_{30}$  e produz um óleo acabado com uma viscosidade não inferior a 19cSt a 40 °C. Contém relativamente poucas parafinas normais.]

- EL αποσταγμάτα (πετρελαιο), βαρέα παραφινικά χημικώς εξουδετερωμένα. Μη επεξεργασμένο ή ελαφρώς επεξεργασμένο βασικό ορυκτέλαιο  
[Πολυπλοκός συνδυασμός υδρογονανθράκων που λαμβάνεται από κατεργασία για να απομακρυνθούν όξινες ουσίες. Αποτελείται κυρίως από υδρογονανθράκες με αριθμό ατόμων άνθρακα κυρίως στην περιοχή από  $C_{20}$  ως και  $C_{40}$  και παράγει τελικό έλαιο με ιξώδες τουλάχιστο 19cSt σε 40 °C. Περιέχει σχετικά μεγάλη αναλογία αλειφατικών υδρογονανθράκων.]
- EN Distillates (petroleum), chemically neutralized heavy paraffinic, Unrefined or mildly refined baseoil  
[A complex combination of hydrocarbons obtained from a treating process to remove acidic materials. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of  $C_{20}$  through  $C_{40}$  and produces a finished oil with a viscosity of at least 100 SUS at 100 °F (19cSt at 40 °C). It contains a relatively large proportion of aliphatic hydrocarbons.]
- FR distillats paraffiniques lourds (pétrole), neutralisés chimiquement, Huile de base non raffinée ou légèrement raffinée  
[Combinaison complexe d'hydrocarbures résultant d'un traitement consistant à éliminer les matières acides. Se compose principalement d'hydrocarbures dont le nombre de carbones se situe en majorité dans la gamme  $C_{20}$ - $C_{40}$ , et donne une huile-produit fini de viscosité supérieure à 19 cSt à 40 °C. Contient une proportion relativement importante d'hydrocarbures aliphatiques.]
- IT distillati (petrolio), frazioni paraffiniche pesanti neutralizzate chimicamente, Olio base non raffinato o mediamente raffinato  
[Combinazione complessa di idrocarburi ottenuta da un processo di trattamento per la rimozione delle sostanze acide. È costituita in prevalenza da idrocarburi con numero di atomi di carbonio prevalentemente nell'intervallo  $C_{20}$ - $C_{40}$  e produce un olio finito di viscosità pari ad almeno 19cSt a 40 °C. Contiene una percentuale relativamente alta di idrocarburi alifatici.]
- NL destillaten (aardolie), chemisch geneutraliseerde zware paraffinehoudende, Niet of licht geraffineerde basisolie  
[Een complexe verzameling koolwaterstoffen die wordt verkregen uit een behandlingsproces waarbij zure materialen worden verwijderd. Bestaat voornamelijk uit koolwaterstoffen, overwegend  $C_{20}$  tot en met  $C_{40}$ , en vormt een voltooide olie met een viscositeit die minstens 19cSt is bij 40 °C. Bevat een relatief grote hoeveelheid alifatische koolwaterstoffen.]
- PT destilados (petróleo), parafínicos pesados neutralizados químicamente, Óleo-base não refinado ou semi-refinado  
[Uma combinação complexa de hidrocarbonetos obtida de um processo de tratamento para remoção de materiais ácidos. É constituída predominantemente por hidrocarbonetos com números de átomos de carbono predominantemente na gama de  $C_{20}$  até  $C_{40}$  e produz um óleo acabado com uma viscosidade mínima de 19cSt a 40 °C. Contem uma proporção relativamente elevada de hidrocarbonetos alifáticos.]

NOTA H

NOTA K

- ES: gases (petróleo), despropanizador por vía seca, ricos en propeno; Gases en petróleo  
[Combinación compleja de hidrocarburos producida por la destilación de productos de gas y fracciones de gasolina de un proceso de craqueo catalítico. Compuesta en su mayor parte de propileno con algo de etano y propano.]
- DA: gasser (råolie), tørre depropanizer-, propenrige; Kulbrintegasser  
[En sammensat blanding af carbonhydrider fremstillet ved destillationen af produkter fra gas- og benzinfraktionerne fra en katalytisk krakningsproces. Den består overvejende af propylen med noget ethan og propan.]
- DE: Gase (Erdöl), Depropanisierer trocken, Propen-reich; Gase aus der Erdölverarbeitung  
[Komplexe Kombination von Kohlenwasserstoffen aus der Destillation von Produkten aus den Gas- und Benzinfraktionen aus einem katalytischen Krackverfahren. Besteht vorherrschend aus Propylen mit etwas Ethan und Propan.]
- EL: αέρια (πετρελαίου), ξηρά από αποπροπανιωτήρα, πλούσια σε προπένιο· Πετρελαϊκό αέριο  
[Πολύπλοκος συνδυασμός υδρογονανθράκων που παράγεται με την απόσταξη προϊόντων των κλασμάτων αερίου και δενζίνης καταλυτικής πυρόλυσης. Συνίσταται κυρίως από προπυλένιο με λίγο αιθάνιο και προπάνιο.]
- EN: Gases (petroleum), depropanizer dry, propene-rich; Petroleum gas  
[A complex combination of hydrocarbons produced by the distillation of products from the gas and gasoline fractions of a catalytic cracking process. It consists predominantly of propylene with some ethane and propane.]
- FR: gaz secs (pétrole), dépropaniseur, riches en propène; Gaz de pétrole  
[Combinaison complexe d'hydrocarbures obtenue par distillation des produits issus des fractions gaz et essence d'un craquage catalytique. Se compose principalement de propylène, avec un peu d'éthane et de propane.]
- IT: gas (petrolio), secchi dal depropanizzatore, ricchi di propilene; Gas di petrolio  
[Combinazione complessa di idrocarburi ottenuti per distillazione di prodotti provenienti dalle frazioni di gas e di benzina di un processo di cracking catalitico. È costituita prevalentemente da propilene con un poco di etano e propano.]
- NL: gassen (aardolie), depropanisator droog, propen-rijk; Petroleumgas  
[Een complexe verzameling koolwaterstoffen, gevormd door de destillatie van produkten uit de gas- en gasolinefracties van een katalytisch kraakproces. Bestaat voornamelijk uit propyleen met wat ethaan en propaan.]
- PT: gases (petróleo), secos do despropanizador, ricos em propeno; Gases de petróleo liquefeitos  
[Uma combinação complexa de hidrocarbonetos produzida pela destilação de produtos das fracções de gás e gasolina de um processo de cracking catalítico. É constituída predominantemente por propileno com algum etano e propano.]

- EL : αεριο ουρας (πετρελαιο), μονάδας καταλυτικής πυρόλυσης, κοινού κλασματωτή μονάδας καταλυτικής αναμόρφωσης και μονάδας υδρογονοαποθείωσης- Πετρελαιο αέριο  
[Πολύπλοκος συνδυασμός υδρογονανθράκων που λαμβάνεται από την κλασμάτωση προϊόντων καταλυτικής αναμόρφωσης και υδρογονοαποθείωσης και έχουν υποστεί κατεργασία για την απομάκρυνση όξινων ξένων προσμίξεων. Συνίσταται κυρίως από υδρογονάνθρακες με αριθμό ατόμων άνθρακα κυρίως στην περιοχή από C<sub>1</sub> ως C<sub>6</sub>.]
- EN : Tail gas (petroleum), catalytic cracker, catalytic reformer and hydrodesulfurizer combined fractionator ; Petroleum gas  
[A complex combination of hydrocarbons obtained from the fractionation of products from catalytic cracking, catalytic reforming and hydrodesulfurizing processes treated to remove acidic impurities. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C<sub>1</sub> through C<sub>6</sub>.]
- FR : gaz résiduels (pétrole), fractionnement combiné des produits de craquage catalytique, de reformage catalytique et d'hydrodésulfuration ; Gaz de pétrole  
[Combinaison complexe d'hydrocarbures issue du fractionnement des produits de craquage catalytique, de reformage catalytique et d'hydrodésulfuration traité pour éliminer les impuretés acides. Se compose principalement d'hydrocarbures dont le nombre de carbones se situe en majorité dans la gamme C<sub>1</sub>-C<sub>6</sub>.]
- IT : gas di coda (petrolio), dai processi di cracking e reforming catalitico e dal frazionatore combinato con l'idrodesolforatore ; Gas di petrolio  
[Combinazione complessa di idrocarburi ottenuta dal frazionamento di prodotti del cracking catalitico, del reforming catalitico e dei processi di idrodesolforazione, trattata per eliminarne le impurezze acide. È costituita prevalentemente da idrocarburi con numero di atomi di carbonio prevalentemente nell'intervallo C<sub>1</sub>-C<sub>6</sub>.]
- NL : restgas (aardolie), fractionator van gecombineerde produkten uit katalytische kraker, katalytische reformator en waterstofontzwavelaar ; Petroleumgas  
[Een complexe verzameling koolwaterstoffen, verkregen door de fractionering van produkten uit katalytische kraak-, katalytische reforming- en waterstofontzwavelingsprocessen en behandeld om zure onzuiverheden te verwijderen. Bestaat voornamelijk uit koolwaterstoffen, overwegend C<sub>1</sub> tot en met C<sub>6</sub>.]
- PT : gas residual (petróleo), do fraccionador de correntes combinadas do cracker catalítico, reformer catalítico e hidrogenodessulfurizador ; Gases de petróleo liquefeitos  
[Uma combinação complexa de hidrocarbonetos obtida do fraccionamento de produtos dos processos de cracking catalítico, reforming catalítico e hidrogenodessulfurização tratados para remoção de impurezas ácidas. São constituídos predominantemente por hidrocarbonetos com números de átomos de carbono predominantemente na gama de C<sub>1</sub> até C<sub>6</sub>.]

[Πολύπλοκος συνδυασμός υδρογονανθράκων που παράγεται με κατεργασία πρώτης ύλης που προέρχεται από τη μονάδα βενζολίου με υδρογόνο παρουσία καταλύτη και η οποία ακολουθείται από αποπεντανώση. Συνίσταται κυρίως από υδρογόνο, αιθάνιο και προπάνιο μαζί με διάφορες μικροποσότητες αζώτου, μονοξειδίου άνθρακα, διοξειδίου άνθρακα και υδρογονανθράκων με αριθμό ατόμων άνθρακα κυρίως στην περιοχή από  $C_1$  ως και  $C_6$ . Μπορεί να περιέχει ίχνη βενζολίου.]
- EN : Gases (petroleum), benzene unit hydrotreater depentanizer overheads ; Refinery gas  
[A complex combination produced by treating the feed from the benzene unit with hydrogen in the presence of a catalyst followed by depentanizing. It consists primarily of hydrogen, ethane and propane with various small amounts of nitrogen, carbon monoxide, carbon dioxide and hydrocarbons having carbon numbers predominantly in the range of  $C_1$  through  $C_6$ . It may contain trace amounts of benzene.]
- FR : gaz (pétrole), unité de production du benzène, hydrotraitement, produits de tête du depentaniseur ; Gaz de raffinerie  
[Combinaison complexe produite par traitement de la charge issue de l'unité de production du benzène avec de l'hydrogène en présence d'un catalyseur, puis par dépentanisation. Se compose principalement d'hydrogène, d'éthane et de propane, avec de petites quantités d'azote, de monoxyde et de dioxyde de carbone, et d'hydrocarbures dont le nombre de carbones se situe en majeure partie dans la gamme  $C_1$ - $C_6$ . Peut contenir des traces de benzène.]
- IT : gas (petrolio), frazioni di testa del depentanizzatore di idrotattamento dell'unità benzene ; Gas di raffineria  
[Combinazione complessa prodotta per trattamento della carica proveniente dall'unità benzene con idrogeno in presenza di un catalizzatore, seguito da depentanizzazione. È costituita principalmente da idrogeno, etano e propano con varie piccole quantità di azoto, ossido di carbonio, anidride carbonica e idrocarburi con numero di atomi di carbonio prevalentemente nell'intervallo  $C_1$ - $C_6$ . Può contenere tracce di benzene.]
- NL : gassen (aardolie), benzeen-installatie waterstofbehandelaar depentanizer-topprodukten ; Raffinaderigas  
[Een complexe combinatie die wordt gevormd door de behandeling van het materiaal uit de benzeen-installatie met waterstof in de aanwezigheid van een katalysator gevolgd door depentanisering. Bestaat voornamelijk uit waterstof, ethaan en propaan met verscheidene kleine hoeveelheden stikstof, koolmonoxide, kooldioxide en koolwaterstoffen, overwegend  $C_1$  tot en met  $C_6$ . Kan sporen benzeen bevatten.]
- PT : gases (petróleo), de cabeça do despentanizador da unidade de tratamento com hidrogénio da unidade de benzeno ; Gás de refinaria  
[Uma combinação complexa produzida por tratamento da carga da unidade de benzeno com hidrogénio na presença de um catalisador seguido de despentanização. É constituída principalmente por hidrogénio, etano e propano com pequenas quantidades variáveis de azoto, monóxido de carbono, dióxido de carbono e hidrocarbonetos com números de átomos de carbono predominantemente na gama de  $C_1$  até  $C_6$ . Pode conter vestígios de benzeno.]

- DE Gase (Erdöl), mit Wasserstoff behandelte saure Kerosin Entspannungströmmel , Raffineriegas  
[Komplexe Kombination, erhalten aus der Entspannungströmmel der Anlage in der sauren Kerosin mit Wasserstoff in Gegenwart eines Katalysators behandelt wird. Besteht in erster Linie aus Wasserstoff und Methan mit verschiedenen geringen Mengen Stickstoff, Kohlenmonoxid und Kohlenwasserstoffen mit Kohlenstoffzahlen vorherrschend im Bereich von C<sub>2</sub> bis C<sub>4</sub>.]
- EL αερια (πετρελαιο), δοχείου εκτονωσης υδρογονοκαταργασμένης, αγλυκαστής κηροζίνης. Καυσίμο αερίο διυλίου τήριου  
[Πολυπλοκός συνδυασμός που λαμβάνεται από το δοχείο εκτονώσεως της μονάδας κατεργασίας αγλυκαστής κηροζίνης με υδρογόνο παρουσία καταλύτη. Συνίσταται πρωτίστως από υδρογόνο και μεθάνιο μαζί με ποικίλες μικροποσότητες αζώτου, μονοξείδιο οξυγόνου άνθρακα και υδρογονάνθρακων με αριθμό ατόμων άνθρακα κυρίως στην περιοχή από C<sub>2</sub> έως και C<sub>4</sub>.]
- EN Gases (petroleum), hydrotreated sour kerosine flash drum , Refinery gas  
[A complex combination obtained from the flash drum of the unit treating sour kerosine with hydrogen in the presence of a catalyst. It consists primarily of hydrogen and methane with various small amounts of nitrogen, carbon monoxide, and hydrocarbons having carbon numbers predominantly in the range of C<sub>2</sub> through C<sub>4</sub>.]
- FR gaz (petrole), kerosene sulfureux hydrotrante ballon de détente , Gaz de raffinerie  
[Combinaison complexe issue de l'unité assurant l'hydrogenation catalytique de kerosene sulfureux. Le compose principiellement d'hydrogene et de methane avec de petites quantites d'azote, de monoxyde de carbone et d'hydrocarbures dont le nombre de carbones se situe en majorite dans la gamme C<sub>2</sub>-C<sub>4</sub>.]
- IT gas (petrolio), da flash drum di cherosene + sour + idrotrattato , Gas di raffinaria  
[Combinazione complessa ottenuta dal flash drum di l'unità di trattamento di cherosene + sour + con idrogeno in presenza di un catalizzatore. È costituita principalmente da idrogeno e metano con varie piccole quantità di azoto, ossido di carbonio e idrocarburi con numero di atomi di carbonio prevalentemente nell'intervallo C<sub>2</sub>-C<sub>4</sub>.]
- NL gassen (aardolie), waterstofbehandelde stinkende kerosine-afdamppvat , Raffinaderigas  
[Een complexe combinatie die wordt verkregen uit het afdampvat van de installatie waarin stinkende kerosine in de aanwezigheid van een katalysator met waterstof wordt behandeld. Bestaat voornamelijk uit waterstof en methaan afzede van verschillende kleine hoeveelheden stikstof, koolmonoxide en koolwaterstoffen overwegend C<sub>2</sub> tot en met C<sub>4</sub>.]
- PT gases (petroleo), do tanque de flash de petroleo com enxofre tratado com hidrogenio , Gas de refinaria  
[Uma combinação complexa obtida do tanque de flash da unidade de tratamento de petroleo contendo enxofre com hidrogenio na presença de um catalisador. É constituída principalmente por hidrogenio e metano com pequenas quantidades variáveis de azoto, monóxido de carbono e hidrocarbonetos com numeros de atomos de carbonio predominantemente na gama de C<sub>2</sub> ate C<sub>4</sub>.]

NOTA K

- ES: gases (petróleo), fracción residual a alta presión del craqueo a vapor de nafta ; Gas de refineria  
[Combinación compleja obtenida como una mezcla de las porciones no condensadas de los productos de un proceso de craqueo a vapor de nafta así como gases residuales obtenidos durante la preparación de productos posteriores. Compuesta fundamentalmente de hidrógeno e hidrocarburos parafínicos y olefínicos con un número de carbonos en su mayor parte dentro del intervalo de C<sub>1</sub> a C<sub>4</sub>, con los que también se puede mezclar gas natural.]
- DA: gasser (råolie), naphtheadampkrakning højtryksrest- ; Raffinaderigas  
En sammensat blanding opnået som en blanding af de ikke-kondenserbare dele af produktet fra en naphtheadampkrakningsproces sa vel som restgasser opnået under bearbejdningen af efterfølgende produkter. Den består overvejende af hydrogen og parafinske og olefinske carbonhydinder, overvejende C<sub>1</sub> til og med C<sub>4</sub>, hvilke kan være blandet med naturgas.]
- DE: Gase (Erdöl), Naphtha Dampkracken Hochdruck Rückstand ; Raffineriegas  
[Komplexe Kombination, die man als Gemisch der nichtkondensierbaren Portionen aus dem Produkt eines Naphtha-Dampkrackverfahrens wie auch als Rückstandsgase erhält, die während der Vorbereitung nachfolgender Produkte anfallen. Besteht vorherrschend aus Wasserstoff und paraffinhaltigen und olefinhaltigen Kohlenwasserstoffen mit Kohlenstoffzahlen vorherrschend im Bereich von C<sub>1</sub> bis C<sub>4</sub>. Erdgas kann auch beigemischt sein.]
- EL: αερια (πετρελαιο), υπολειμματος υψηλής πίεσης ατμοπυρόλυσης νάφθας; Καύσιμο αέριο διυλιστηρίου  
[Πολύπλοκος συνδυασμός που λαμβάνεται σαν μείγμα των μη συμπυκνώσιμων τμημάτων από το προϊόν ατμοπυρόλυσης νάφθας και σαν υπολειμματικά αέρια που λαμβάνονται κατά την παραγωγή επόμενων προϊόντων. Συνίσταται κυρίως από υδρογόνο και παραφινικούς ολεφινικούς υδρογονάνθρακες με αριθμό ατόμων άνθρακα κυρίως στην περιοχή από C<sub>1</sub> ως και C<sub>4</sub>, με τον οποίο μπορεί επίσης να αναμειχθεί και φυσικό αέριο.]
- EN: Gases (petroleum), naphtha steam cracking high-pressure residual , Refinery gas  
[A complex combination obtained as a mixture of the non-condensable portions from the product of a naphtha steam cracking process as well as residual gases obtained during the preparation of subsequent products. It consists predominantly of hydrogen and paraffinic and olefinic hydrocarbons having carbon numbers predominantly in the range of C<sub>1</sub> through C<sub>4</sub>, with which natural gas may also be mixed.]
- FR: gaz résiduels haute pression (pétrole), vapocraquage du naphta ; Gaz de raffinerie  
[Combinaison complexe, mélange des parties non condensables du produit résultant du vapocraquage du naphta et des gaz résiduels résultant de la préparation des produits en aval. Se compose principalement d'hydrogène et d'hydrocarbures paraffiniques et oléfiniques dont le nombre de carbonnes se situe en majorité dans la gamme C<sub>1</sub>-C<sub>4</sub>, auxquels du gaz naturel peut se trouver mélangé.]
- IT: gas (petrolio), residui di cracking con vapore ad alta pressione di nafta ; Gas di raffineria  
[Combinazione complessa ottenuta come miscela delle parti non condensabili dal prodotto di un processo di cracking con vapore di nafta oltre ai gas residui ottenuti durante la preparazione dei prodotti susseguenti. È costituita prevalentemente da idrogeno ed idrocarburi paraffinici ed olefinici con numero di atomi di carbonio prevalentemente nell'intervallo C<sub>1</sub>-C<sub>4</sub>, con cui può trovarsi miscelato anche del gas naturale.]
- NL: gassen (aardolie), stoomkraken van nafta onder hoge druk residu- ; Raffinaderijgas  
[Een complexe combinatie die wordt verkregen als een mengsel van de niet-condenseerbare delen uit het produkt van een nafta-stoomkraakproces evenals residugassen die worden verkregen tijdens de bereiding van daaruit voortkomende produkten. Bestaat voornamelijk uit waterstof en paraffinische en olefinische koolwaterstoffen, overwegend C<sub>1</sub> tot en met C<sub>4</sub>, waarmee aardgas ook kan worden gemengd.]
- PT: gases (petróleo), residuais e de alta pressão do steam-cracking de nafta ; Gás de refinaria  
[Uma combinação complexa obtida como uma mistura de fracções não condensáveis dos produtos do processo de steam-cracking da nafta e de gases residuais obtidos durante a preparação dos produtos subsequentes. É constituída predominantemente por hidrogénio e hidrocarbonetos parafínicos e olefínicos com números de átomos de carbono predominantemente na gama de C<sub>1</sub> até C<sub>4</sub>, com os quais também pode estar misturado gás natural.]

NOTA K

- ES: gases (petróleo),  $C_{3,4}$ ; Gases de petróleo  
[Combinación compleja de hidrocarburos producida por destilación de productos del craqueo de petróleo crudo. Compuesta de hidrocarburos con un número de carbonos dentro del intervalo de  $C_3$  a  $C_4$ , en su mayor parte propano y propileno, y con un intervalo de ebullición aproximado de  $51\text{ }^{\circ}\text{C}$  a  $-1\text{ }^{\circ}\text{C}$ .]
- DA: gasser (råolie),  $C_{3,4}$ ; Kulbrintegasser  
[En sammensat blanding af carbonhydrider fremstillet ved destillation af produkter fra krakningen af råolie. Den består af carbonhydrider,  $C_3$  til og med  $C_4$ , overvejende propan og propylen, med kogesinterval omtrent fra  $-51\text{ }^{\circ}\text{C}$  til  $-1\text{ }^{\circ}\text{C}$ .]
- DE: Gase (Erdöl),  $C_{3,4}$ ; Gase aus der Erdölverarbeitung  
[Komplexe Kombination von Kohlenwasserstoffen, erhalten durch Destillation von Produkten aus dem Cracken von Rohöl. Besteht aus Kohlenwasserstoffen mit Kohlenstoffzahlen im Bereich von  $C_3$  bis  $C_4$ , vorherrschend aus Propan und Propylen, und siedet im Bereich von etwa  $-51\text{ }^{\circ}\text{C}$  bis  $-1\text{ }^{\circ}\text{C}$ .]
- EL: αερία (πετρελαίου),  $C_{3,4}$ ; Πετρελαϊκό αέριο  
[Πολύπλοκος συνδυασμός υδρογονανθράκων που λαμβάνεται με απόσταξη προϊόντων πυρόλυσης αργού πετρελαίου. Συνίσταται από υδρογονάνθρακες με αριθμό ατόμων άνθρακα  $C_3$  ως και  $C_4$ , κυρίως προπανίου και προπυλénιο και με περιοχή βρασμού από  $-51\text{ }^{\circ}\text{C}$  ως  $-1\text{ }^{\circ}\text{C}$  περίπου.]
- EN: Gases (petroleum),  $C_{3,4}$ ; Petroleum gas  
[A complex combination of hydrocarbons produced by distillation of products from the cracking of crude oil. It consists of hydrocarbons having carbon numbers in the range of  $C_3$  through  $C_4$ , predominantly of propane and propylene, and boiling in the range of approximately  $-51\text{ }^{\circ}\text{C}$  to  $-1\text{ }^{\circ}\text{C}$  ( $-60\text{ }^{\circ}\text{F}$  to  $30\text{ }^{\circ}\text{F}$ )]
- FR: gaz en  $C_3$ - $C_4$  (pétrole); Gaz de pétrole  
[Combinaison complexe d'hydrocarbures produite par distillation des produits résultant du craquage de pétrole brut. Se compose d'hydrocarbures dont le nombre de carbones se situe dans la gamme  $C_3$ - $C_4$ , principalement du propane et du propylène, et dont le point d'ébullition est compris approximativement entre  $-51\text{ }^{\circ}\text{C}$  et  $-1\text{ }^{\circ}\text{C}$ .]
- IT: gas (petrolio),  $C_{3,4}$ ; Gas di petrolio  
[Combinazione complessa di idrocarburi ottenuta per distillazione di prodotti provenienti dal cracking del grezzo. È costituita da idrocarburi con numero di atomi di carbonio nell'intervallo  $C_3$ - $C_4$ , prevalentemente propano e propilene, e punto di ebollizione nell'intervallo da  $-51\text{ }^{\circ}\text{C}$  a  $-1\text{ }^{\circ}\text{C}$  ca.]
- NL: gassen (aardolie),  $C_{3,4}$ ; Petroleumgas  
[Een complexe verzameling koolwaterstoffen, verkregen uit de destillatie van produkten van het kraken van ruwe olie. Bestaat uit koolwaterstoffen, overwegend  $C_3$  tot en met  $C_4$  en voornamelijk propaan en propyleen, met een kooktraject van ongeveer  $-51\text{ }^{\circ}\text{C}$  tot  $-1\text{ }^{\circ}\text{C}$ .]
- PT: gases (petróleo),  $C_{3,4}$ ; Gases de petróleo liquefeitos  
[Uma combinação complexa de hidrocarbonetos produzida por destilação de produtos do cracking de petróleo bruto. É constituída por hidrocarbonetos com números de átomos de carbono na gama de  $C_3$  até  $C_4$ , predominantemente propano e propileno, e destila no intervalo de aproximadamente  $-51\text{ }^{\circ}\text{C}$  a  $-1\text{ }^{\circ}\text{C}$ .]

## NOTA K

- ES: gases del petróleo, licuados; Gases de petróleo  
[Combinación compleja de hidrocarburos producida por la destilación de petróleo crudo. Compuesta de hidrocarburos con un número de carbonos en su mayor parte dentro del intervalo de  $C_3$  a  $C_7$ , y con un intervalo de ebullición aproximado de  $-40\text{ }^{\circ}\text{C}$  a  $80\text{ }^{\circ}\text{C}$ .]
- DA: raoliegasser, fortættede; Kulbrintegasser  
[En sammensat blanding af carbonhydrider fremstillet ved destillationen af råolie. Den består af carbonhydrider, overvejende  $C_3$  til og med  $C_7$ , med kogesinterval omtrent fra  $-40\text{ }^{\circ}\text{C}$  til  $80\text{ }^{\circ}\text{C}$ .]
- DE: Erdöl-gase, verflüssigt; Gase aus der Erdölverarbeitung  
[Komplexe Kombination von Kohlenwasserstoffen, hergestellt durch Destillation von Rohöl. Besteht aus Kohlenwasserstoffen mit Kohlenstoffzahlen vorherrschend im Bereich von  $C_3$  bis  $C_7$  und siedet im Bereich von etwa  $-40\text{ }^{\circ}\text{C}$  bis  $80\text{ }^{\circ}\text{C}$ .]
- EL: πετρελαιοῦ αέρια, υγροποιημένα· Πετρελαιοῦ αέριο  
[Πολύπλοκος συνδυασμός υδρογονανθράκων που λαμβάνεται με την αποσταξη αργού πετρελαίου. Συνίσταται από υδρογονάνθρακες με αριθμό ατόμων άνθρακα κυρίως στην περιοχή από  $C_3$  ως και  $C_7$  και με περιοχή βρασμού από  $-40\text{ }^{\circ}\text{C}$  ως  $80\text{ }^{\circ}\text{C}$  περίπου.]
- EN: Petroleum gases, liquefied; Petroleum gas  
[A complex combination of hydrocarbons produced by the distillation of crude oil. It consists of hydrocarbons having carbon numbers predominantly in the range of  $C_3$  through  $C_7$  and boiling in the range of approximately  $-40\text{ }^{\circ}\text{C}$  to  $80\text{ }^{\circ}\text{C}$  ( $-40\text{ }^{\circ}\text{F}$  to  $176\text{ }^{\circ}\text{F}$ ).]
- FR: gaz de pétrole liquéfiés; Gaz de pétrole  
[Combinaison complexe d'hydrocarbures obtenue par distillation du pétrole brut. Se compose d'hydrocarbures dont le nombre de carbones se situe principalement dans la gamme  $C_3$ - $C_7$ , et dont le point d'ébullition est compris approximativement entre  $-40\text{ }^{\circ}\text{C}$  et  $80\text{ }^{\circ}\text{C}$ .]
- IT: gas di petrolio, liquefatti; Gas di petrolio  
[Combinazione complessa di idrocarburi prodotta per distillazione del grezzo. È costituita da idrocarburi con numero di atomi di carbonio prevalentemente nell'intervallo  $C_3$ - $C_7$  e punto di ebollizione nell'intervallo da  $-40\text{ }^{\circ}\text{C}$  a  $80\text{ }^{\circ}\text{C}$  ca.]
- NL: aardolie-gassen, vloeibaar gemaakt; Petroleumgas  
[Een complexe verzameling koolwaterstoffen, gevormd door de destillatie van ruwe olie. Bestaat uit koolwaterstoffen, overwegend  $C_3$  tot en met  $C_7$ , met een kooktraject van ongeveer  $-40\text{ }^{\circ}\text{C}$  tot  $80\text{ }^{\circ}\text{C}$ .]
- PT: gases do petróleo, liquefeitos; Gases de petróleo liquefeitos  
[Uma combinação complexa de hidrocarbonetos produzida pela destilação de petróleo bruto. É constituída por hidrocarbonetos com números de átomos de carbono predominantemente na gama de  $C_3$  até  $C_7$ , e destila no intervalo de aproximadamente  $-40\text{ }^{\circ}\text{C}$  a  $80\text{ }^{\circ}\text{C}$ .]

NOTA K

- ES : gases del petróleo, licuados, desazufrados ; Gases de petróleo  
[Combinación compleja de hidrocarburos obtenida sometiendo la mezcla de gases de petróleo licuados a un proceso de desazufrado para transformar los mercaptanos o para separar impurezas ácidas. Compuesta de hidrocarburos con un número de carbonos en su mayor parte dentro del intervalo de  $C_1$  a  $C_4$ , y con un intervalo de ebullición aproximado de  $-40^{\circ}\text{C}$  a  $80^{\circ}\text{C}$ .]
- DA : raoliegasser, fortættede, sweetenede ; Kulbrintegasser  
[En sammensat blanding af carbonhydrider opnået ved at underkaste en fortættet raoliegasblanding en sweetening-proces for at omdanne mercaptaner eller for at fjerne sure urenheder. Den består af carbonhydrider, overvejende  $C_1$  til og med  $C_4$ , med koges-interval omtrent fra  $-40^{\circ}\text{C}$  til  $80^{\circ}\text{C}$ .]
- DE : Erdöl-gase, verflüssigt, gesüßt ; Gase aus der Erdölverarbeitung  
[Komplexe Kombination von Kohlenwasserstoffen, erhalten durch Einwirkung eines Süßungsverfahrens auf verflüssigtes Erdöl-gas-gemisch, um Mercaptane zu konvertieren oder um saure Verunreinigungen zu entfernen. Besteht aus Kohlenwasserstoffen mit Kohlenstoffzahlen vorherrschend im Bereich von  $C_1$  bis  $C_4$ , und siedet im Bereich von etwa  $-40^{\circ}\text{C}$  bis  $80^{\circ}\text{C}$ .]
- EL : πετρελαιοῦ αέρια, υγροποιημένα, γλυκασμένα· Πετρελαιοῦ αέριο  
[Πολύπλοκος συνδυασμός υδροανθράκων που λαμβάνεται από υγροποιημένο αέριο μείγμα πετρελαίου με γλύκανση, για να μετατραπούν μερκαπτανες ή να απομακρυνθούν οι όξινες προσμίξεις. Συνίσταται από υδρογονάνθρακες με αριθμό ατόμων άνθρακα κυρίως στην περιοχή από  $C_1$  ως και  $C_4$ , και με περιοχή βρασμού από  $-40^{\circ}\text{C}$  ως  $80^{\circ}\text{C}$  περίπου.]
- EN : Petroleum gases, liquefied, sweetened ; Petroleum gas  
[A complex combination of hydrocarbons obtained by subjecting liquefied petroleum gas mix to a sweetening process to convert mercaptans or to remove acidic impurities. It consists of hydrocarbons having carbon numbers predominantly in the range of  $C_1$  through  $C_4$ , and boiling in the range of approximately  $-40^{\circ}\text{C}$  to  $80^{\circ}\text{C}$  ( $-40^{\circ}\text{F}$  to  $176^{\circ}\text{F}$ ).]
- FR : gaz de pétrole liquéfiés adoucis ; Gaz de pétrole  
[Combinaison complexe d'hydrocarbures obtenue en soumettant un mélange de gaz de pétrole liquéfiés à un procédé d'adoucissement, afin de convertir les mercaptans ou d'éliminer les impuretés acides. Se compose d'hydrocarbures dont le nombre de carbones se situe principalement dans la gamme  $C_1$ - $C_4$ , et dont le point d'ébullition est compris approximativement entre  $-40^{\circ}\text{C}$  et  $80^{\circ}\text{C}$ .]
- IT : gas di petrolio, liquefatti, addolciti ; Gas di petrolio  
[Combinazione complessa di idrocarburi ottenuta sottoponendo una miscela di gas di petrolio liquefatti a un processo di addolcimento per la conversione dei mercaptani o per l'eliminazione delle impurezze acide. È costituita da idrocarburi con numero di atomi di carbonio nell'intervallo  $C_1$ - $C_4$ , e punto di ebollizione nell'intervallo da  $-40^{\circ}\text{C}$  a  $80^{\circ}\text{C}$  ca.]
- NL : aardoliegassen, vloeibaar gemaakt, stankvrij gemaakt ; Petroleumgas  
[Een complexe verzameling koolwaterstoffen, verkregen door het onderwerpen van een vloeibaar gemaakt aardoliegasmengsel aan een stankvrijmakingsproces, om mercaptanen om te zetten of zure onzuiverheden te verwijderen. Bestaat uit koolwaterstoffen, overwegend  $C_1$  tot en met  $C_4$ , met een kooktraject van ongeveer  $-40^{\circ}\text{C}$  tot  $80^{\circ}\text{C}$ .]
- PT : gases de petróleo, liquefeitos, tratados (sweetened) ; Gases de petróleo liquefeitos  
[Uma combinação complexa de hidrocarbonetos obtida submetendo uma mistura de gases de petróleo liquefeitos a um processo de sweetening para converter mercaptans ou remover impurezas ácidas. É constituída por hidrocarbonetos com números de átomos de carbono predominantemente na gama de  $C_1$  até  $C_4$ , e destila no intervalo de aproximadamente  $-40^{\circ}\text{C}$  a  $80^{\circ}\text{C}$ .]

NOTA N

- ES destilados (petróleo), fracción intermedia tratada con arcilla, Gasóleo, sin especificar  
[Combinación compleja de hidrocarburos resultante del tratamiento de una fracción de petróleo con arcilla natural o modificada, normalmente en un proceso de percolación, para separar las trazas presentes de compuestos polares e impurezas. Compuesta de hidrocarburos con un número de carbonos en su mayor parte dentro del intervalo de  $C_9$  a  $C_{20}$  y con un intervalo de ebullición aproximado de 150° a 345 °C]
- DA: destillater (råolie), lerbehandlede middeltunge, Uspecificeret gasolie  
[En sammensat blanding af carbonhydrier fremkommet ved behandling af en råoliefraktion med naturligt eller modificeret ler, enten en kontakt- eller perkoleringsproces, til fjernelse af spormængderne af polære forbindelser og tilstedeværende urenheder. Den består af carbonhydrier, overvejende  $C_9$  til og med  $C_{20}$ , med kogesinterval omtrent fra 150 °C til 345 °C]
- DE Destillate (Erdöl), Ton-behandelte mittlere; Gasöl — nicht spezifiziert  
[Komplexe Kombination von Kohlenwasserstoffen, entsteht durch Behandeln einer Erdölfraktion mit natürlichem oder modifiziertem Ton in entweder einem Kontakt- oder Perkulationsverfahren zum Entfernen von Spuren polarer Verbindungen und von vorhandenen Verunreinigungen. Besteht aus Kohlenwasserstoffen mit Kohlenstoffzahlen vorherrschend im Bereich von  $C_9$  bis  $C_{20}$  und siedet im Bereich von etwa 150 °C bis 345 °C]
- EL αποσταγμάτα (πετρέλαιου), μεσαία κατεργασμένα με αργίλλο. Πετρέλαιο μη προδιαγεγραμμένο  
[Πολυπλοκός συνδυασμός υδρογονανθράκων που προκύπτει από κατεργασία κλασματος πετρελαιο με φυσική ή τροποποιημένη αργίλλο, συνήθως με διεργασία διήθησης για να απομακρυνθούν ιχνοποσότητες πολικών ενώσεων και υπάρχουσες προσμίξεις. Συνίσταται από υδρογονανθράκες με αριθμό ατόμων άνθρακα κυρίως στην περιοχή από  $C_9$  έως και  $C_{20}$  και με περιοχή βρασμού 150 °C έως 345 °C περίπου]
- EN Distillates (petroleum), clay-treated middle; Gasoil — unspecified  
[A complex combination of hydrocarbons resulting from treatment of a petroleum fraction with natural or modified clay, usually in a percolation process to remove the trace amounts of polar compounds and impurities present. It consists of hydrocarbons having carbon numbers predominantly in the range of  $C_9$  through  $C_{20}$  and boiling in the range of approximately 150 °C to 345 °C (302 °F to 639 °F)]
- FR distillats moyens (pétrole), traités à la terre, Gazole — non spécifié  
[Combinaison complexe d'hydrocarbures résultant du traitement d'une fraction pétrolière avec de l'argile naturelle ou modifiée, généralement par percolation, destinée à éliminer les traces de composés polaires et les impuretés. Se compose d'hydrocarbures dont le nombre de carbones se situe principalement dans la gamme  $C_9$ ,  $C_{20}$  et dont le point d'ébullition est compris approximativement entre 150 °C et 345 °C]
- IT distillati (petrolio), frazione intermedia trattata con argilla, Gasolio — non specificato  
[Combinazione complessa di idrocarburi ottenuta dal trattamento di una frazione di petrolio con argilla naturale o modificata, normalmente in un processo di percolazione per eliminare le tracce di composti polari e impurezze presenti. È costituita da idrocarburi con numero di atomi di carbonio prevalentemente nell'intervallo  $C_9$ - $C_{20}$  e punto di ebollizione nell'intervallo 150 °C - 345 °C ca]
- NL: destillaten (aardolie), met klei behandelde middentractie, Gasolie — niet gespecificeerd  
[Een complexe verzameling koolwaterstoffen, verkregen uit de behandeling van een aardoliefractie met natuurlijke of gemodificeerde klei, gewoonlijk in een filtratieproces om sporen van polaire verbindingen en onzuiverheden te verwijderen. Bestaat uit koolwaterstoffen, overwegend  $C_9$  tot en met  $C_{20}$  met een kooktraject van ongeveer 150 °C tot 345 °C]
- PT destilados (petróleo), medios tratados com argila, Gasóleo — não especificado  
[Uma combinação complexa de hidrocarbonetos resultante do tratamento de uma fracção petrolífera com argila natural ou modificada, normalmente por um processo de percolação para remoção de vestígios de compostos polares e impurezas presentes. É constituída por hidrocarbonetos com números de átomos de carbono predominantemente na gama de  $C_9$  até  $C_{20}$  e destila no intervalo de aproximadamente 150 °C a 345 °C]

- ES n drocarburos, destilado de la fraccion intermedia tratada con hidrógeno  $C_{16-20}$ , fracciones ligeras de destilación Gasoleo, sin especificar  
[Combinacion compleja de hidrocarburos obtenida como primeros productos de la destilacion a vacio de efluentes del tratamiento de un destilado de la fraccion intermedia con hidrogeno. Compuesta fundamentalmente de hidrocarburos con un numero de carbonos en su mayor parte dentro del intervalo de  $C_{16}$  a  $C_{20}$  y con un intervalo de ebullicion aproximado de 290 °C a 350 °C Produce un aceite final con una viscosidad de 2cSt a 100 °C]
- DA carbonhydrider, C16-20-hydrogenbehandlet middeltungt destillat, lette destillater Uspecificeret gasolie  
[En sammensat blanding af carbonhydrider opnaet som forløb fra vakuumdestillationen af udløb fra behandlingen af et middeltungt destillat med hydrogen. Den består overvejende af carbonhydrider  $C_{16}$  til og med  $C_{20}$ , med kogesinterval omtrent fra 290 °C til 350 °C. Den danner en færdig olie med en viskositet på 2 cSt ved 100 °C]
- DE Kohlenwasserstoffe  $C_{16-20}$  mit Wasserstoff behandeltes Mitteldestillat, leichte Destillate Gasol — nicht spezifiziert  
[Komplexe Kombination von Kohlenwasserstoffen, die man als erste Laute aus der Vakuumdestillation von Ausflüssen aus der Behandlung eines Mitteldestillates mit Wasserstoff erhält. Besteht vorherrschend aus Kohlenwasserstoffen mit Kohlenstoffzahlen vorherrschend im Bereich von  $C_{16}$  bis  $C_{20}$  und siedet im Bereich von etwa 290 °C bis 350 °C. Ergibt ein Fertigöl mit einer Viskosität von 2cSt bei 100 °C]
- EL υδρογονάνθρακες,  $C_{16-20}$ , κατεργασμένου με υδρογόνο μεσαίου αποσταγματος, ελαφρά κλάσματα απόσταξης Πετρέλαιο μη προδιατεγραμμένο  
[Πολυπλοκός συνδυασμός υδρογονάνθρακων που λαμβάνεται σαν τα πρώτα αποσταγματα από την απόσταξη σε κενό, των τ-οροσίων από την κατεργασία με υδρογόνο μεσαίου αποσταγματος. Συνίσταται κυρίως από υδρογονάνθρακες με αριθμό ατόμων άνθρακα κυρίως στην περιοχή από  $C_{16}$  έως και  $C_{20}$  και με περιοχή βρασμού από 290 °C έως 350 °C περίπου. Το έτοιμο έλαιο έχει ιώδες 2cSt στους 100 °C]
- EN Hydrocarbons,  $C_{16-20}$ , hydrotreated middle distillate, distn lights, Gasoil — unspecified  
[A complex combination of hydrocarbons obtained as first runnings from the vacuum distillation of effluents from the treatment of a middle distillate with hydrogen. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of  $C_{16}$  through  $C_{20}$  and boiling in the range of approximately 290 °C to 350 °C (554 °F to 662 °F). It produces a finished oil having a viscosity of 2cSt at 100 °C (212 °F)]
- FR hydrocarbures en  $C_{16-20}$ , distillat moyen hydrotraite, fraction légère de distillation Gazole — non spécifié  
[Combinaison complexe d'hydrocarbures obtenue comme premier écoulement lors de la distillation sous vide des effluents de traitement d'un distillat moyen. Se compose principalement d'hydrocarbures dont le nombre de carbones se situe en majorité dans la gamme  $C_{16}$  à  $C_{20}$  et dont le point d'ébullition est compris approximativement entre 290 °C et 350 °C. donne une huile produite finie de viscosité égale à 2cSt à 100 °C]
- IT idrocarburi,  $C_{16-20}$  idrotrattati distillato intermedio, frazioni leggere della distillazione, Gasolio — non specificato  
[Combinazione complessa di idrocarburi ottenuta come prime frazioni della distillazione sotto vuoto di effluenti dal trattamento con idrogeno di un distillato intermedio. È costituita prevalentemente da idrocarburi con numero di atomi di carbonio prevalentemente nell'intervallo  $C_{16}$  a  $C_{20}$  e punto di ebollizione nell'intervallo 290 °C - 350 °C ca. Produce un olio finito avente viscosità di 2cSt a 100 °C]
- NL koolwaterstoffen,  $C_{16-20}$ -waterstofbehandeld middendestillaat, lichte destillatiefractionen Gasolie — niet gespecificeerd  
[Een complexe verzameling koolwaterstoffen die wordt verkregen als de eerste fracties uit de vacuumdestillatie van de vloeistof die wordt verkregen door de behandeling van een middendestillaat met waterstof. Bestaat voornamelijk uit koolwaterstoffen, overwegend  $C_{16}$  tot en met  $C_{20}$ , met een kooktraject van ongeveer 290 °C tot 350 °C. Het vormt een voltooide olie met een viscositeit van 2cSt bij 100 °C]
- PT hidrocarbonetos, destilado medio  $C_{16-20}$  tratado com hidrogenio, fracções leves da destilação Gasóleo — não especificado  
[Uma combinação complexa de hidrocarbonetos obtida como fracção inicial da destilação de vacuo de efluentes do tratamento com hidrogenio de um destilado medio. É constituída predominantemente por hidrocarbonetos com numeros de atomos de carbono predominantemente na gama de  $C_{16}$  ate  $C_{20}$  e destila no intervalo de aproximadamente 290 °C a 350 °C. Produz um óleo acabado com uma viscosidade de 2cSt a 100 °C]

- ES: destilados (petróleo), fracción parafínica intermedia, tratada con carbón; Gasóleo, sin especificar  
[Combinación compleja de hidrocarburos obtenida por el tratamiento de petróleo con carbón vegetal activado para separar constituyentes polares en trazas e impurezas. Compuesta fundamentalmente de hidrocarburos con un número de carbonos en su mayor parte dentro del intervalo de  $C_{16}$  a  $C_{36}$ .]
- DA: destillater (råolie), intermediære paraffin-, carbonbehandlede; Uspecificeret gasolie  
[En sammensat blanding af carbonhydrider opnået ved behandlingen af råolie med aktivt kul, til fjernelse af spor af polære bestanddele og urenheder. Den består overvejende af carbonhydrider, overvejende  $C_{16}$  til og med  $C_{36}$ .]
- DE: Destillate (Erdöl), intermediäre paraffinhaltige, mit Kohlenstoff behandelt; Gasöl — nicht spezifiziert  
[Komplexe Kombination von Kohlenwasserstoffen, die man durch Behandlung von Erdöl mit Aktivkohle erhält, um Spuren polarer Bestandteile und Verunreinigungen zu entfernen. Besteht vorherrschend aus Kohlenwasserstoffen mit Kohlenstoffzahlen vorherrschend im Bereich von  $C_{16}$  bis  $C_{36}$ .]
- EL: αποσταγματα (πετρελαίου), ενδιάμεσα παραφινικά, κατεργασμένα με άνθρακα. Πετρέλαιο μη προδιαγεγραμμένο  
[Πολύπλοκος συνδυασμός υδρογονανθράκων που λαμβάνεται με την κατεργασία πετρελαίου με ενεργό ξυλάνθρακα για την απομακρυνση ιχνών πολικών συστατικών και προσμίξεων. Συνίσταται κυρίως από υδρογονάνθρακες με αριθμό άνθρακα κυρίως στην περιοχή από  $C_{16}$  έως και  $C_{36}$ .]
- EN: Distillates (petroleum), intermediate paraffinic, carbon-treated, Gasoil — unspecified  
[A complex combination of hydrocarbons obtained by the treatment of petroleum with activated charcoal for the removal of trace polar constituents and impurities. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of  $C_{16}$  through  $C_{36}$ .]
- FR: distillats paraffiniques intermédiaires (pétrole), traités au charbon; Gazole — non spécifié  
[Combinaison complexe d'hydrocarbures obtenue par traitement du pétrole avec du charbon actif afin d'éliminer les traces de constituants polaires et les impuretés. Se compose principalement d'hydrocarbures dont le nombre de carbones se situe en majeure partie dans la gamme  $C_{16}$ - $C_{36}$ .]
- IT: distillati (petrolio), parafinici intermedi, trattati con carbone; Gasolio — non specificato  
[Combinazione complessa di idrocarburi ottenuta dal trattamento di petrolio con carbone attivo per eliminare costituenti polari in tracce ed impurezze. È costituita prevalentemente da idrocarburi con numero di atomi di carbonio prevalentemente nell'intervallo  $C_{16}$ - $C_{36}$ .]
- NL: destillaten (aardolie), middelste paraffine-houdende, behandeld met koolstof; Gasolie — niet gespecificeerd  
[Een complexe verzameling koolwaterstoffen die is verkregen door de behandeling van aardolie met geactiveerde houtskool voor de verwijdering van sporen polaire bestanddelen en onzuiverheden. Bevat voornamelijk koolwaterstoffen, overwegend  $C_{16}$  tot en met  $C_{36}$ .]
- PT: destilados (petróleo), parafinicos médios, tratados com carvão activado; Gasóleo — não especificado  
[Uma combinação complexa de hidrocarbonetos obtida pelo tratamento de petróleo com carvão activado para remoção de vestígios de constituintes polares e impurezas. É constituída predominantemente por hidrocarbonetos com números de átomos de carbono predominantemente na gama de  $C_{16}$  até  $C_{36}$ .]

NOTES

NOTES

- ES cera de parafina y petroleo (petroleo), temperatura de fusión baja, tratada con hidrogeno. Gatsch de parafina  
Combinación compleja de hidrocarburos obtenida por tratamiento con hidrogeno de cera de parafina y petroleo de temperatura de fusión baja en presencia de un catalizador. Compuesta fundamentalmente de hidrocarburos saturados de cadena lineal y ramificada con un número de carbonos en su mayor parte superior a C<sub>12</sub>].
- DA slack wax (råolie), lavtsmeltende, hydrogenbehandlet. Paraffin  
En sammensat blanding af carbonhydrier oprettet ved behandling af lavtsmeltende råolie slack wax med hydrogen i tilstedeværelse af katalysator. Den består overvejende af mættede ligeledes og forgrenede carbonhydrider med stigende størrelse end C<sub>12</sub>].
- DE Paraffinkuchen (Erdöl), niedrig schmelzend, mit wasserstoff behandelt. Paraffingatsch  
Komplexe Kombination von Kohlenwasserstoffen, die man durch Behandeln von niedrig schmelzendem Paraffinkuchen mit wasserstoff in Gegenwart eines Katalysators erhält. Besteht vorherrschend aus gesättigten Kohlenwasserstoffen mit gerader, verzweigter Kette mit Kohlenstoffzahlen vorherrschend größer als C<sub>12</sub>].
- EL ελαίουχος κηρος (πετρελαιο), χαμηλής θερμοκρασίας τήξεως, υδροκατεργασμένος. Ψευδοκηρος  
Πολυπλοκός συνδυασμός υδρογονανθράκων που αποβάλλεται με την κατεργασία ελαίουχου κηρος με υδρογόνο χαμηλής θερμοκρασίας με υδρογόνο παρουσία καταλύτη. Σε σύσταση κυρίως από κορεσμένους ευθείας και διακλασμένους αλυσίδες υδρογονανθράκες με αριθμό ατόμων άνθρακα σημαντικά μεγαλύτερο από C<sub>12</sub>].
- EN Slack wax (petroleum), low-melting, hydrotreated. Slack wax  
A complex combination of hydrocarbons obtained by treatment of low-melting petroleum slack wax with hydrogen in the presence of a catalyst. It consists predominantly of saturated straight and branched chain hydrocarbons having carbon number predominantly greater than C<sub>12</sub>].
- FR gatsch a bas point de fusion (petrole), hydrotraite. Gatsch  
(Combinaison complexe d'hydrocarbures obtenue par traitement a l'hydrogene en presence d'un catalyseur d'un gatsch petrole a bas point de fusion. Se compose principalement d'hydrocarbures satures a chaine droite ou ramifiee dont le nombre de carbones est en majorite superieur a C<sub>12</sub>].
- IT cera molle (petrolio), basso punto di fusione, idrotrattata. Paraffina molle  
(Combinazione complessa di idrocarburi per trattamento di cera molle di petrolio a basso punto di fusione con idrogeno in presenza di un catalizzatore. E costituita prevalentemente da idrocarburi saturi a catena lineare e ramificata con numero di atomi di carbonio prevalentemente maggiore di C<sub>12</sub>].
- NL olierijke paraffine (aardolie), smeltend bij lage temperatuur, met waterstof behandeld. Ruwe paraffinewas  
(Een complexe verzameling koolwaterstoffen die wordt verkregen door de behandeling van bij lage temperatuur smeltende olierijke paraffine uit aardolie met waterstof en de aanwezigheid van een katalysator. Bestaat voornamelijk uit verzadigde vertakte en niet-vertakte koolwaterstoffen overwegend groter dan C<sub>12</sub>].
- PT parafinas brutas (petróleo), de ponto de fusão baixo, tratadas com hidrogénio. Cera bruta  
(Uma combinação complexa de hidrocarbonetos obtida por tratamento de parafinas brutas de ponto de fusão baixo com hidrogeno na presença de uma catalisator. É constituída predominantemente por hidrocarbonetos saturados de cadeia linear e ramificada com numeros de atomos de carbono predominantemente superiores a C<sub>12</sub>].

NOTA P

- ES : nafta ; Nafta de baja temperatura de inflamación  
[Productos del petróleo refinados, parcialmente refinados o sin refinar producidos por destilación del gas natural. Compuestos por hidrocarburos con un número de carbonos en su mayor parte dentro del intervalo de  $C_1$  a  $C_6$  y con un intervalo de ebullición aproximado de 100 °C a 200 °C.]
- DA : naphtha ; Lavkogende nafta  
[Raffinerede, delvist raffinerede, eller uraffinerede råolieprodukter fremstillet ved destillation af naturgas. De består af carbonhydrider overvejende  $C_1$  til og med  $C_6$ , med koginterval omrent fra 100 °C til 200 °C.]
- DE : Naphtha , Naphtha, niedrig siedend  
[Aufbereitete, teilweise aufbereitete oder nicht aufbereitete Erdölprodukte hergestellt durch Destillation von Naturgas. Besteht aus Kohlenwasserstoffen mit Kohlenstoffzahlen vorherrschend im Bereich von  $C_1$  bis  $C_6$  und siedet im Bereich von etwa 100 °C bis 200 °C.]
- EL : ναφθα· Ελαφρά νάφθα  
[διυλισμένα, μερικώς διυλισμένα, ή μη διυλισμένα προϊόντα πετρελαίου, που παράγονται με απόσταξη φυσικού αερίου. Συνίσταται από υδρογονάνθρακες με αριθμό ατόμων άνθρακα κυρίως  $C_1$  και  $C_6$  και βράζει στην περιοχή από 100 °C έως 200 °C περίπου.]
- EN : Naphtha ; Low boiling point naphtha  
[Refined, partly refined, or unrefined petroleum products by the distillation of natural gas. It consists of hydrocarbons having carbon numbers predominantly in the range of  $C_1$  through  $C_6$  and boiling in the range of approximately 100 °C to 200 °C (212 °F to 392 °F).]
- FR : naphta . Naphta à point d'ébullition bas  
[Produits pétroliers raffinés, partiellement raffinés ou non raffinés obtenus par distillation du gaz naturel. Se composent principalement d'hydrocarbures dont le nombre de carbones se situe en majorité dans la gamme  $C_1$ - $C_6$  et dont le point d'ébullition est compris approximativement entre 100 °C et 200 °C.]
- IT : nafta , Nafta con basso punto di ebollizione  
[Prodotti del petrolio, parzialmente raffinati o non raffinati, ottenuti della distillazione del gas naturale. Sono costituiti da idrocarburi con numero di atomi di carbonio prevalentemente nell'intervallo  $C_1$ - $C_6$  e punto di ebollizione nell'intervallo 100 °C - 200 °C ca.]
- NL : nafta ; Nafta met laag kookpunt  
[Geraffineerde, deels geraffineerde of ongeraffineerde aardolieprodukten, geproduceerd door destillatie van aardgas. Het bestaat uit koolwaterstoffen, overwegend in de reeks van  $C_1$  tot en met  $C_6$ , met een kooktraject van ongeveer 100 °C tot 200 °C.]
- PT : nafta , Nafta de baixo ponto de ebulição  
[Produtos petrolíferos refinados, parcialmente refinados ou não refinados produzidos pela destilação de gás natural. São constituído por hidrocarbonetos com números de átomos de carbono predominantemente na gama de  $C_1$  até  $C_6$  e desulam no intervalo de aproximadamente 100 °C a 200 °C.]

- ES gasolina, recuperacion a vapor Nafta de baja temperatura de inflamacion  
[Combinacion compleja de hidrocarburos separados de los gases por sistemas de recuperacion a vapor por enfriamiento. Compuesta de hidrocarburos con un numero de carbonos en su mayor parte dentro del intervalo de  $C_4$  a  $C_{11}$ , y con un intervalo de ebullicion aproximado de  $-20^{\circ}\text{C}$  a  $196^{\circ}\text{C}$ ]
- DA benzin, damp-genudvindings- Lavtkogende nafta  
[En sammensat blanding af carbonhydnder separeret fra gasserne fra damp genudvindingsystemet ved afkøling. Den består af carbonhydnder, overvejende  $C_4$  til og med  $C_{11}$  med kogesinterval omtrent fra  $-20^{\circ}\text{C}$  til  $196^{\circ}\text{C}$ ]
- DE Benzin, Dampf-Wiedergewinnung Naphtha, niedrig siedend  
[Komplexe Kombination von Kohlenwasserstoffen, durch Kühlen von den Gasen aus den Dampf-Wiedergewinnungssystemen abgetrennt. Besteht aus Kohlenwasserstoffen mit Kohlenstoffzahlen vorherrschend im Bereich von  $C_4$  bis  $C_{11}$  und siedet im Bereich von etwa  $-20^{\circ}\text{C}$  bis  $196^{\circ}\text{C}$ ]
- FL βενζίνα, ανακτησης ατμών Ελαφρά ναφθα  
[Πολυπλοκός συνδυασμός υδρογονανθράκων που διαχωρίζεται με ψύξη από τα αέρια του συστήματος ανακτησης ατμών. Συνίσταται από υδρογονανθράκες με αριθμό ατόμων άνθρακα κυρίως στην περιοχή από  $C_4$  έως και  $C_{11}$  και με περιοχή θραύσεως από  $-20^{\circ}\text{C}$  έως  $196^{\circ}\text{C}$  περίπου]
- EN Gasoline, vapor-recovery, Low boiling point naphtha  
[A complex combination of hydrocarbons separated from the gases from vapor recovery systems by cooling. It consists of hydrocarbons having carbon numbers predominantly in the range of  $C_4$  through  $C_{11}$  and boiling in the range of approximately  $-20^{\circ}\text{C}$  to  $196^{\circ}\text{C}$  ( $-4^{\circ}\text{F}$  to  $384^{\circ}\text{F}$ )]
- FR essence, recuperation de vapeur Naphta a point d'ébullition bas  
[Combinaison complexe d'hydrocarbures separée par refroidissement des gaz issus des systemes de recuperation de vapeur. Se compose d'hydrocarbures dont le nombre de carbones se situe principalement dans la gamme  $C_4$ ,  $C_{11}$  et dont le point d'ébullition est compris approximativement entre  $-20^{\circ}\text{C}$  et  $196^{\circ}\text{C}$ ]
- IT benzina, recupero vapon Nafta con basso punto di ebollizione  
[Combinazione complessa di idrocarburi separata dai gas del sistema di recupero dei vapori per raffreddamento. È costituita da idrocarburi con numero di atomi di carbonio prevalentemente nell'intervallo  $C_4$  -  $C_{11}$ , e punto di ebollizione nell'intervallo da  $-20^{\circ}\text{C}$  a  $196^{\circ}\text{C}$  ca.]
- NL gasoline, dampsterugwinning Nafta met laag kookpunt  
[Een complexe verzameling koolwaterstoffen, afgescheiden van de gassen die worden verkregen uit dampsterwinningsystemen door afkøling. Bestaat uit koolwaterstoffen, overwegend  $C_4$  tot en met  $C_{11}$ , met een kooktraject van ongeveer  $-20^{\circ}\text{C}$  tot  $196^{\circ}\text{C}$ ]
- PT gasolina, da recuperação de vapor Nafta de baixo ponto de ebulição  
[Uma combinação complexa de hidrocarbonetos separada dos gases de sistemas de recuperação de vapor por arrefecimento. É constituída por hidrocarbonetos com numeros de atomos de carbono predominantemente na gama de  $C_4$  ate  $C_{11}$ , e destila no intervalo de aproximadamente  $-20^{\circ}\text{C}$  a  $196^{\circ}\text{C}$ ]

NOTA 2

- CS refinados (petroleo), reformador, unidad de separacion Lurgi. Nafta modificada de baja temperatura de inflamacion [Combinacion compleja de hidrocarburos obtenida como refinado de una unidad de separacion Lurgi. Compuesta fundamentalmente de hidrocarburos no aromaticos con algunas cantidades pequenas de hidrocarburos aromaticos con un numero de carbonos en su mayor parte dentro del intervalo de  $C_6$  a  $C_{12}$ .]
- DA raffinater (raolie), reformer. Lurgi-enhedsseparator. Lavtkogende modifieret nafta [Den sammensatte blanding af carbonhydrider opnaet som et raffinat fra en Lurgi-separationsenhed. Den består overvejende af ikke aromatiske carbonhydrider med varierende små mængder aromatiske carbonhydrider, overvejende  $C_6$  til og med  $C_{12}$ .]
- DE Raffinate (Erdöl), Reformier. Lurgi-anlage separiert. Naphtha, niedrig siedend, modifiziert [Komplexe Kombination von Kohlenwasserstoffen, erhalten als Raffinat aus einer Lurgitrennanlage. Besteht vorherrschend aus nichtaromatischen Kohlenwasserstoffen mit variierenden kleinen Mengen aromatischer Kohlenwasserstoffe mit Kohlenstoffzahlen vorherrschend im Bereich von  $C_6$  bis  $C_{12}$ .]
- EL ραφινατ (πετρελαιο), αναμορφωτήρα, διαχωρισμένα από μονάδα Lurgi. Ελαφρά επεξεργασμένη νάφθα [Ο πυκνωτικός, σε νάφθα, υδρογονάνθρακων που λαμβάνεται σαν εκχυλιστικό προϊόν από μονάδα διαχωρισμού Lurgi. Συνίσταται κυρίως από μη αρωματικούς υδρογονάνθρακες με οσφαιρές μικροποσοτήτες αρωματικών υδρογονανθράκων με αριθμό ατόμων άνθρακα κυρίως στην περιοχή από  $C_6$  έως και  $C_{12}$ .]
- EN Ratinates (petroleum), reformer. Lurgi unit-sepd. Low boiling point modified naphtha [The complex combination of hydrocarbons obtained as raffinate from a Lurgi separation unit. It consists predominantly of non-aromatic hydrocarbons with various small amounts of aromatic hydrocarbons having carbon numbers predominantly in the range of  $C_6$  through  $C_{12}$ .]
- FR raffinats de reformage (petrole), unite de separation Lurgi, Naphta moditie a point d'ébullition bas [Combinaison complexe d'hydrocarbures obtenue comme raffinat dans une unite de separation Lurgi. Se compose principalement d'hydrocarbures non aromatiques ainsi que de petites quantites d'hydrocarbures aromatiques dont le nombre de carbones se situe en majorite dans la gamme  $C_6$  -  $C_{12}$ .]
- IT raffinati (petrolio), impianto di reforming, separazione in impianto Lurgi. Nafta modificata con basso punto di ebollizione [Combinazione complessa di idrocarburi ottenuta come raffinato da un impianto di separazione Lurgi. È costituita prevalentemente da idrocarburi non aromatici con varie piccole quantità di idrocarburi aromatici con numero di atomi di carbonio prevalentemente nell'intervallo  $C_6$  -  $C_{12}$ .]
- NL raffinaten (aardolie), reformer, met Lurgi-unit afgescheiden. Gemodificeerde nafta met laag kookpunt [De complexe verzameling koolwaterstoffen, verkregen als een raffinaat uit een Lurgi scheidingsunit. Bestaat voornamelijk uit niet aromatische koolwaterstoffen, met kleine hoeveelheden aan aromatische koolwaterstoffen, overwegend  $C_6$  tot en met  $C_{12}$ .]
- PT refinados (petroleo), do reformer, da unidade de separação Lurgi. Nafta modificada de baixo ponto de ebulição [A combinação complexa de hidrocarbonetos obtida como um refinado de uma unidade de separação. É constituída predominantemente por hidrocarbonetos não aromaticos com pequenas variáveis de hidrocarbonetos aromaticos com numeros de atomos de carbonio predominantemente na gama de  $C_6$  ate  $C_{12}$ .]

NOTA II

NOTA II

- ES nafta modificada de baja temperatura de inflamacion  
[Combinacion completa de hidrocarburos producida por la destilacion de los productos de reaccion del isobutano con hidrocarburos monoolefinicos normalmente con un numero de carbonos dentro del intervalo de C<sub>4</sub> a C<sub>12</sub>. Compuesta fundamentalmente de hidrocarburos saturados de cadena ramificada con un numero de carbonos en su mayor parte dentro del intervalo de C<sub>4</sub> a C<sub>12</sub>, con algunos butanos y con un intervalo de ebullicion aproximado de 35 °C a 200 °C.]
- DA naphtha (ræflet), full-range alkylat, butanholdig. Lavtkogende modificeret nafta  
[En sammensæt har der sigt at carbonno i de fleste forbindelser i de destillationer af produkterne fra reaktion mellem isobutan og monoolefiniske carbonhydroider sædvanligvis C<sub>4</sub> til og med C<sub>12</sub>. Den består af overvejende forgrenede, mættede carbonhydroider, overvejende C<sub>4</sub> til og med C<sub>12</sub> med nogle butaner, med kogeminterval omtrent fra 35 °C til 200 °C.]
- DE Naphta (Erdöl), gesamte Alkylat-Butan-enthaltend. Naphta, niedrig siedend, modifiziert  
[Komplexe Kombination von Kohlenwasserstoffen aus der Destillation von Reaktionsprodukten von Isobuten mit monoolefinischen Kohlenwasserstoffen, gewöhnlich mit Kohlenstoffzahlen im Bereich von C<sub>4</sub> bis C<sub>12</sub>. Besteht aus gesättigten Kohlenwasserstoffen mit vorherrschend verzweigter Kette und mit Kohlenstoffzahlen vorherrschend im Bereich von C<sub>4</sub> bis C<sub>12</sub> mit einigen Butanen. Das Siedebereich beträgt von etwa 35 °C bis 200 °C.]
- EL ναφθα (πετρελαιο), προϊόν αλκυλίωσης, πτηνούς σύστασης, που περιχει βουτάνιο. Ελαφρά επεξεργασμένη ναφθα  
[Πομπλητικός συνδυασμός υδρογονανθράκων που ταξινομείται με την αποστάση των προϊόντων αντιδράσης ισοβουτανίου με μονοολεφινικούς υδρογονανθράκες, συνήθως με αριθμό ατόμων άνθρακα κυρίως στην περιοχή από C<sub>4</sub> έως και C<sub>12</sub>. Συνίσταται κυρίως από κορεσμένους υδρογονανθράκες με διακλαδισμένη αλυσίδα και με αριθμό ατόμων άνθρακα κυρίως στην περιοχή από C<sub>4</sub> έως και C<sub>12</sub>, μαζί με μικρά βουτάνια και βράζει στην περιοχή από 35 °C έως 200 °C περίπου.]
- EN Naphta (petroleum), full-range alkylate, butane-contg. Low boiling point modified naphta  
[A complex combination of hydrocarbons produced by the distillation of the reaction products of isobutane with monoolefinic hydrocarbons usually ranging in carbon numbers from C<sub>4</sub> through C<sub>12</sub>. It consists of predominantly branched chain saturated hydrocarbons having carbon numbers predominantly in the range of C<sub>4</sub> through C<sub>12</sub>, with some butanes and boiling in the range of approximately 35 °C to 200 °C (95 °F to 428 °F).]
- FR naphta d'alkylation a large intervalle d'ebullition (petrole) contenant du butane. Naphta modifie a point d'ebullition bas  
[Combinaison complexe d'hydrocarbures produite par la distillation des produits de reaction de l'isobutane avec des hydrocarbures mono-olefiniques dont le nombre de carbones varie generalement de C<sub>4</sub> a C<sub>12</sub>. Se compose d'hydrocarbures en majeure partie satures et ramifies dont le nombre de carbones se situe principalement dans la gamme C<sub>4</sub>-C<sub>12</sub>, avec quelques butanes, et dont le point d'ebullition est compris approximativement entre 35 °C et 200 °C.]
- IT nafta (petrolio) gamma completa frazioni di alchilato, contenente butano. Nafta modificata con basso punto di ebollizione  
[Combinazione complessa di idrocarburi ottenuta per distillazione di prodotti di reazione di isobutano con idrocarburi monoolefinici C<sub>4</sub>-C<sub>12</sub>. E costituita prevalentemente da idrocarburi saturi ramificati con numero di atomi di carbonio prevalentemente nell'intervallo C<sub>4</sub>-C<sub>12</sub>, con alcuni butani e con punto di ebollizione nell'intervallo 35 °C - 200 °C ca.]
- NL nafta (aardolie), totaal bereik van gealkyleerde butaan bevattend. Gemodificeerde nafta met laag kookpunt  
[Een complexe verzameling koolwaterstoffen, gevormd door de destillatie van de reactieproducten van isobutaan met mono-olefinische koolwaterstoffen, overwegend C<sub>4</sub> tot en met C<sub>12</sub>. Bestaat voornamelijk uit vertakte verzadigde koolwaterstoffen, overwegend C<sub>4</sub> tot en met C<sub>12</sub> met enige butanen en met een kooktraject van ongeveer 35 °C tot 200 °C.]
- PT nafta (petróleo), carga de alquilação, contendo butano. Nafta modificada de baixo ponto de ebulição  
[Uma combinação complexa de hidrocarbonetos produzida pela destilação dos produtos da reacção de isobutano com hidrocarbonetos monoolefinicos normalmente com numeros de atomos de carbono na gama de C<sub>4</sub> ate C<sub>12</sub>. É constituída predominantemente por hidrocarbonetos saturados de cadeia ramificada com numeros de atomos de carbono predominantemente na gama de C<sub>4</sub> ate C<sub>12</sub>, com alguns butanos e destila no intervalo de aproximadamente 35 °C a 200 °C.]

NOTA 1  
COLA 1

- ES** nafta (petroleo), alquilato-butano  $C_{12}$ , rico en isooctano. Nafta modificada de baja temperatura de inflamación. Combinación compleja de hidrocarburos obtenida por alquilación de butanos. Compuesta fundamentalmente de hidrocarburos con un número de carbonos en su mayor parte dentro del intervalo de  $C_8$  a  $C_{12}$ , rico en isooctano, y cuyo intervalo de ebullición aproximado de 35 °C a 210 °C.
- DA** naphtha (råolie),  $C_{12}$  butanalkylat, isooctan-rig. Lavtkogende modificeret nafta. [En sammensat blanding af carbonhydrier opnået ved alkylering af butaner. Den består overvejende af carbonhydrier, overvejende  $C_8$  til og med  $C_{12}$ , rig på isooctan, med koginterval omtrent fra 35 °C til 210 °C.]
- DE** Naphtha (Erdöl),  $C_{12}$  Butanalkylat, Isooctan-reich. Naphtha, niedrig siedend, modifiziert. [Komplexe Kombination von Kohlenwasserstoffen, die man durch Alkylierung von Butanen erhält. Besteht vorwiegend aus Kohlenwasserstoffen mit Kohlenstoffzahlen vorherrschend im Bereich von  $C_8$  bis  $C_{12}$ , reich an Isooctan, und siedet im Bereich von etwa 35 °C bis 210 °C.]
- EL** νάφθα (επίγειο), αλκυλιωμένο βουτάνιο  $C_{12}$ , πλούσιο σε ισοοκτανό. Ελαφρύ πετρελαιοειδές. [Πρόκειται περί σύνθετης αλκυλιωμένης βουτανικής νάφθας, η οποία αποτελείται κυρίως από υδρογονάνθρακες με αριθμό ατόμων άνθρακα κυρίως στην περιοχή από  $C_8$  έως και  $C_{12}$ , πλούσια σε ισοοκτανό, και με σημείο βρασμού περίπου 35 °C έως 210 °C περίπου.]
- EN** Naphtha (petroleum),  $C_{12}$  butane-alkylate, isooctane-rich. Low boiling point modified naphtha. [A complex combination of hydrocarbons obtained by alkylation of butanes. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of  $C_8$  through  $C_{12}$ , rich in isooctane, and boiling in the range of approximately 35 °C to 210 °C (95 °F to 410 °F).]
- FR** naphta (pétrole), alkylation en  $C_{12}$  de butane, riche en isooctane. Naphta modifiée à point d'ébullition bas. [Combinaison complexe d'hydrocarbures obtenue par alkylation de butanes. Se compose principalement d'hydrocarbures dont le nombre de carbones se situe en majeure dans la gamme  $C_8$ - $C_{12}$ , riches en isooctane, et dont le point d'ébullition est compris approximativement entre 35 °C et 210 °C.]
- IT** nafta (petrolio),  $C_{12}$  butan-alkilato, ricca di isooctano. Nafta modificata con basso punto di ebollizione. [Combinazione complessa di idrocarburi ottenuta per alchilazione di butani. È costituita prevalentemente da idrocarburi con numeri di atomi di carbonio prevalentemente nell'intervallo  $C_8$ - $C_{12}$ , ricca di isooctano, e con punto di ebollizione nell'intervallo 35 °C-210 °C ca.]
- NL** nafta (aardolie),  $C_{12}$ -butaanalkylaar, rijk aan isooctaan. Gemodificeerde nafta met laag kookpunt. [Een complexe verzameling koolwaterstoffen die wordt verkregen door alkylering van butanen. Bestaat voornamelijk uit koolwaterstoffen, overwegend  $C_8$  tot en met  $C_{12}$ , rijk aan isooctaan, met een kooktraject van ongeveer 35 °C tot 210 °C.]
- PT** nafta (petróleo),  $C_{12}$  da alquilação de butanos, rica em isooctano. Nafta modificada de baixo ponto de ebulição. [Uma combinação complexa de hidrocarbonetos obtida por alquilação de butanos. É constituída predominantemente por hidrocarbonetos com números de átomos de carbono predominantemente na gama de  $C_8$  até  $C_{12}$ , rica em isooctano, e destila no intervalo de aproximadamente 35 °C a 210 °C.]

NOTA 12

- ES** hidrocarburos, destilados de nafta ligera tratada con hidrogeno refinado con disolvente. Nafta modificada de baja temperatura de inflamacion  
[Combinacion de hidrocarburos obtenida de la destilacion de nafta tratada con hidrogeno seguida por una extraccion con un intervalo de ebullicion aproximado de 94 °C a 99 °C]
- DA** carbonhydridet, hydrogenbehandlede lette naphthadestillater, solventraffinerede. Lavtkogende modificeret nafta  
[En sammensat blandning af carbonhydridet opnaet fra destillationen af hydrogenbehandlet naphtha, efterfulgt af en solventekstraktions- og destillationsproces. Den består overvejende af mættede carbonhydridet, med koginterval omtrent fra 94 °C til 99 °C]
- DE** Kohlenwasserstoffe, mit Wasserstoff behandelte leichte Naphthadestillate, durch Lösungsmittel aufbereitet  
Naphtha niedrige siedend, modifiziert  
[Komplexe Kombination von Kohlenwasserstoffen die man aus der Destillation von mit Wasserstoff behandelter Naphtha gefolgt von einem Lösungsmittel-extraktions- und Destillationsverfahren erhält. Besteht vorherrschend aus gesättigten Kohlenwasserstoffen und siedet im Bereich von etwa 94 °C bis 99 °C]
- EL** υδρογονανθράκες, ελαφρά αποσταγμένα ναφθας κατεργασίας με υδρογόνο, εξευγενισμένα με διαλύτη. Ελαφρά επεξεργασμένη ναφθα  
[Συνδυασμός υδρογονανθράκων που λαμβάνεται από την απόσταξη ναφθας κατεργασμένης με υδρογόνο και υφολογίζεται από εκχύλιση με διαλύτη και απόσταξη. Συνίσταται κυρίως από κορεσμένους υδρογονανθράκες με περιοχή βρασμού από 94 °C έως 99 °C περίπου]
- EN** Hydrocarbons, hydrotreated light naphtha distillates, solvent-refined, Low boiling point modified naphtha  
[A combination of hydrocarbons obtained from the distillation of hydrotreated naphtha followed by a solvent extraction and distillation process. It consists predominantly of saturated hydrocarbons boiling in the range of approximately 94 °C to 99 °C (201 °F to 210 °F)]
- FR** hydrocarbures, distillats de naphta léger hydrotraité, raffinés au solvant, Naphta modifié à point d'ébullition bas  
[Combinaison d'hydrocarbures obtenue par distillation de naphta hydrotraité, puis extraction au solvant et distillation. Se compose principalement d'hydrocarbures saturés dont le point d'ébullition est compris approximativement entre 94 °C et 99 °C]
- IT** idrocarburi, distillati leggeri di nafta idrotrattati, raffinati con solvente. Nafta modificata con basso punto di ebollizione  
[Combinazione complessa di idrocarburi ottenuti della distillazione di nafta sottoposta ad hydrotreating seguita da un'estrazione con solvente ed un processo di distillazione. E' costituita prevalentemente da idrocarburi saturi con punto di ebollizione nell'intervallo 94 °C-99 °C, ca.]
- NL** koolwaterstoffen, waterstofbehandelde lichte naftadestillaten, solventgeraffineerd. Gemodificeerde nafta met laag kookpunt.  
[Een verzameling koolwaterstoffen die wordt verkregen uit de destillatie van waterstofbehandelde nafta gevolgd door een solventextractie en destillatieproces. Bestaat voornamelijk uit verzadigde koolwaterstoffen, met een kooktraject van ongeveer 94 °C tot 99 °C]
- PT** hidrocarbonetos, destilados de nafta leve tratada com hidrogenio, refinados com solvente. Nafta modificada de baixo ponto de ebulição  
[Uma combinação de hidrocarbonetos obtida da destilação de nafta tratada com hidrogenio seguida por um processo de extração com solvente e destilação. E' constituída predominantemente por hidrocarbonetos saturados que destilam no intervalo de aproximadamente 94 °C a 99 °C]

NOTA I

- ES nafta (petróleo), isomerización, fracción de  $C_6$ . Nafta modificada de baja temperatura de inflamación  
[Combinación compleja de hidrocarburos obtenida por destilación de una gasolina que ha sido isomerizada catalíticamente. Compuesta en su mayor parte de isómeros de hexano con un intervalo de ebullición aproximado de 60 °C a 66 °C]
- DA naphtha (raffiniet), isomerisation,  $C_6$ -fraktion. Lavtkogende modificeret nafta  
[En sammensætning af carbonhydrider opnået ved destillation af en benzol, der er blevet katalytisk isomeriseret. Den består overvejende af hexanisomerer med kogepunkt omtrent fra 60 °C til 66 °C]
- DE Naphtha (Erdöl), Isomerisierung,  $C_6$ -Fraktion. Naphtha, niedrig siedend, modifiziert  
[Komplexe Kombination von Kohlenwasserstoffen die man durch Destillation eines katalytisch isomerisierten Benzins erhält. Besteht vorherrschend aus Hexanisomeren und siedet im Bereich von etwa 60 °C bis 66 °C]
- EL νάφθα (πετρέλαιο), ισομερισμοί, κλάσμα  $C_6$ . Ελαφρά επεξεργασμένη νάφθα  
[Ποικύλοκος συνδυασμός υδρογονανθράκων που λαμβάνεται με καταλυτική θενζίνης που έχει καταλυτικώς ισομερισθεί. Συνίσταται κυρίως από ισομερή εξάνιου με περιοχή θρασμού από 60 °C έως 66 °C περίπου]
- EN Naphtha (petroleum), isomerization,  $C_6$ -fraction. Low boiling point modified naphtha  
[A complex combination of hydrocarbons obtained by distillation of a gasoline which has been catalytically isomerized. It consists predominantly of hexane isomers boiling in the range of approximately 60 °C to 66 °C (140 °F to 151 °F)]
- FR naphtha (pétrole), isomérisation, fraction en  $C_6$ . Naphtha modifié a point d'ébullition bas  
[Combinaison complexe d'hydrocarbures obtenue par distillation d'une essence ayant subi une isomérisation catalytique. Se compose principalement d'isomères d'hexane dont le point d'ébullition est compris approximativement entre 60 °C et 66 °C]
- IT nafta (petrolio), isomerizzazione, frazione  $C_6$ . Nafta modificata con basso punti di ebollizione  
[Combinazione complessa di idrocarburi ottenuta per distillazione di una benzina che è stata isomerizzata cataliticamente. È costituita prevalentemente da isomeri dell'esano con punto di ebollizione nell'intervallo 60 °C-66 °C ca.]
- NL nafta (aardolie), isomerisatie,  $C_6$ -fractie. Gemodificeerde nafta met laag kookpunt  
[Een complexe verzameling koolwaterstoffen die wordt verkregen door destillatie van een gasoline die katalytisch geïsomeriseerd is. Bestaat voornamelijk uit hexaanisomeren met een kooktraject van ongeveer 60 °C tot 66 °C]
- PT nafta (petróleo), da isomerização, fracção em  $C_6$ . Nafta modificada de baixo ponto de ebulição  
[Uma combinação complexa de hidrocarbonetos obtida da destilação de uma gasolina que foi isomerizada cataliticamente. É constituída predominantemente por isómeros de hexano que destilam no intervalo de aproximadamente 60 °C a 66 °C]

NOTA I

- ES hidrocarburos,  $C_{12}$ , craqueo de nafta refinada con disolvente, Nafta modificada de baja temperatura de inflamación. [Combinación compleja de hidrocarburos obtenida por absorción de benceno de una fracción hidrocarbónica rica en benceno, catalíticamente hidrogenada catalíticamente que fue obtenida por la destilación de nafta craqueada y prehidrogenada. Compuesto que consiste principalmente de hidrocarburos parafínicos y nafténicos con un número de átomos de carbono en su mayoría comprendido entre 70 y 100.]

ΕΣ υδρογονάνθρακες,  $C_{12}$ , craqueo de nafta refinada con disolvente, Nafta modificada de baja temperatura de inflamación. [Combinación compleja de hidrocarburos obtenida por absorción de benceno de una fracción hidrocarbónica rica en benceno, catalíticamente hidrogenada catalíticamente que fue obtenida por la destilación de nafta craqueada y prehidrogenada. Compuesto que consiste principalmente de hidrocarburos parafínicos y nafténicos con un número de átomos de carbono en su mayoría comprendido entre 70 y 100.]

ES hidrocarburos,  $C_{12}$ , craqueo de nafta refinada con disolvente, Nafta modificada de baja temperatura de inflamación. [Combinación compleja de hidrocarburos obtenida por absorción de benceno de una fracción hidrocarbónica rica en benceno, catalíticamente hidrogenada catalíticamente que fue obtenida por la destilación de nafta craqueada y prehidrogenada. Compuesto que consiste principalmente de hidrocarburos parafínicos y nafténicos con un número de átomos de carbono en su mayoría comprendido entre 70 y 100.]

- EL υδρογονάνθρακες,  $C_{12}$ , craqueo de nafta refinada con disolvente, Nafta modificada de baja temperatura de inflamación. [Combinación compleja de hidrocarburos obtenida por absorción de benceno de una fracción hidrocarbónica rica en benceno, catalíticamente hidrogenada catalíticamente que fue obtenida por la destilación de nafta craqueada y prehidrogenada. Compuesto que consiste principalmente de hidrocarburos parafínicos y nafténicos con un número de átomos de carbono en su mayoría comprendido entre 70 y 100.]

- EN hydrocarbons,  $C_{12}$ , naphtha-cracking, solvent-refined, Low boiling point modified naphtha. [Complex combination of hydrocarbons obtained by the sorption of benzene from a catalytically fully hydrogenated benzene rich hydrocarbon cut that was distillatively obtained from prehydrogenated cracked naphtha. It consists predominantly of paraffinic and naphthenic hydrocarbons having carbon numbers predominantly in the range of , through 40 and boiling in the range of approximately 70 °C to 100 °C (155 °F to 212 °F).]

- FR hydrocarbures en  $C_{12}$ , craquage de naphta, raffinés au solvant, Naphta modifiée à point d'ébullition bas. [Combinaison complexe d'hydrocarbures obtenue par absorption du benzène dans une coupe d'hydrocarbures riche en benzène avant une hydrogénation catalytique complète. Cette coupe résultant de la distillation de naphta de craquage préalablement hydrogénée se compose principalement d'hydrocarbures paraffiniques et nafténiques dont le nombre de carbones se situe en majorité dans la gamme  $C_{12}$  et dont le point d'ébullition est compris approximativement entre 70 °C et 100 °C.]

- FI hidrocarburi,  $C_{12}$ , cracking di nafta, raffinati con solvente, Nafta modificata con basso punto di ebollizione. [Combinazione complessa di idrocarburi ottenuta mediante assorbimento di benzene da un taglio idrocarbureo ricco di benzene completamente idrogenato cataliticamente che era stato ottenuto mediante distillazione da nafta crackizzata preidrogenata. È costituita prevalentemente da idrocarburi paraffinici e naftenici con un numero di atomi di carbonio prevalentemente nell'intervallo  $C_{12}$  e con punto di ebollizione nell'intervallo 70 °C - 100 °C ca.]

- NL koolwaterstoffen,  $C_{12}$ , naftakraken, solventgeraffineerd; Gemodificeerde nafta met laag kookpunt. [Een complexe verzameling koolwaterstoffen die wordt verkregen door de sorptie van benzeen uit een katalytisch volledig gehydrogeneerde benzeenrijke koolwaterstoffractie die destillatief werd verkregen uit voorgehydrogeneerde gekraakte nafta. Bestaat voornamelijk uit paraffinische en naftenische koolwaterstoffen, overwegend  $C_{12}$  en  $C_{12}$ , met een kooktraject van ongeveer 70 °C tot 100 °C.]

- PT hidrocarbonetos,  $C_{12}$ , do cracking da nafta, refinados com solvente; Nafta modificada de baixo ponto de ebulição. [Uma combinação complexa de hidrocarbonetos obtida por absorção de benzeno de um corte de hidrocarbonetos rico em benzeno totalmente hidrogenado cataliticamente que foi obtido por destilação de nafta do cracking pre-hidrogenada. É constituída predominantemente por hidrocarbonetos parafínicos e nafténicos com números de átomos de carbono predominantemente na gama de  $C_{12}$  e com ponto de ebulição no intervalo de aproximadamente 70 °C a 100 °C.]

- ES hidrocarburos, ricos en  $C_{10}$ , destilados de nafta ligera tratada con hidrógeno, refinados con disolvente. Nafta modificada de baja temperatura de inflamación  
[Combinación compleja de hidrocarburos obtenida por destilación de nafta tratada con hidrógeno seguida por extracción con disolvente. Compuesta fundamentalmente de hidrocarburos saturados y con un intervalo de ebullición de 65 °C a 70 °C.]
- DA Carbonhydrider,  $C_{10}$ -rige, hydrogenbehandlede lette naphthadestillater, solvent-raffinerede, Lavtkogende modificeret nafta  
[En sammensat blanding af carbonhydrider opnået ved destillation af hydrogenbehandlet naphtha efterfulgt af solventekstraktion. Den består overvejende af mættede carbonhydrider, med koginterval omtrent fra 65 °C til 70 °C.]
- DE Kohlenwasserstoffe,  $C_{10}$ -reich, mit Wasserstoff behandelte leichte Naphthadestillate, durch Lösungsmittel aufbereitet. Nafta, niedrig siedend, modifiziert  
[Komplexe Kombination von Kohlenwasserstoffen, die man durch Destillation von mit Wasserstoff behandelter Naphtha mit nachfolgender Lösungsmittelextraktion erhält. Besteht vorherrschend aus gesättigten Kohlenwasserstoffen und sind im Bereich von etwa 65 °C bis 70 °C.]
- EL υδρογονάνθρακες, πλούσιοι σε  $C_{10}$ , κατεργασμένα με υδρογόνο ελαφρά αποσταγμένα νάφθα, εξευγενισμένα με διαλυτή. Ελαφρά επεξεργασμένη νάφθα  
[Πολύπλοκος συνδυασμός υδρογονανθράκων που λαμβάνεται με απόσταξη κατεργασμένης με υδρογόνο νάφθας και στη συνέχεια από εκχύλιση με διαλυτή. Συνίσταται κυρίως από κορεσμένους υδρογονάνθρακες και με περιοχή βρασμού από 65 °C έως 70 °C (ερίπου)]
- EN Hydrocarbons,  $C_{10}$ -rich, hydrotreated light naphtha distillates, solvent-refined, Low boiling point modified naphtha  
[A complex combination of hydrocarbons obtained by distillation of hydrotreated naphtha followed by solvent extraction. It consists predominantly of saturated hydrocarbons and boiling in the range of approximately 65 °C to 70 °C (149 °F to 158 °F)]
- FR hydrocarbures riches en  $C_{10}$ , distillats de naphtha léger hydrotraité, raffinés au solvant, Naphtha modifié à point d'ébullition bas  
[Combinaison complexe d'hydrocarbures obtenue par distillation de naphtha hydrotraite puis au solvant. Se compose principalement d'hydrocarbures saturés dont le point d'ébullition est compris approximativement entre 65 °C et 70 °C.]
- IT idrocarburi, ricchi di  $C_{10}$ , distillati leggeri di nafta idrotrattati, raffinati con solvente, Nafta modificata con basso punto di ebollizione  
[Combinazione complessa di idrocarburi ottenuta per distillazione di nafta idrotrattata seguita da estrazione con solvente. È costituita prevalentemente da idrocarburi saturi con punto di ebollizione nell'intervallo 65 °C-70 °C ca.]
- NL koolwaterstoffen, rijk aan  $C_{10}$ , met waterstof behandelde lichte naftadestillaten, solventgezuiverde, Gemodificeerde nafta met laag kookpunt  
[Een complexe verzameling koolwaterstoffen die wordt verkregen door destillatie van met waterstof behandelde nafta gevolgd door solventextractie. Bestaat voornamelijk uit verzadigde koolwaterstoffen, met een kooktraject van ongeveer 65 °C tot 70 °C.]
- PT hidrocarbonetos, ricos em  $C_{10}$ , destilados da nafta leve tratada com hidrogénio, refinados com solvente, Nafta modificada de baixo ponto de ebulição  
[Uma combinação complexa de hidrocarbonetos obtida por destilação de nafta tratada com hidrogénio seguida por extração com solvente. É constituída predominantemente por hidrocarbonetos saturados e destila no intervalo de aproximadamente 65 °C a 70 °C.]

NOTA P

- ES : nafta (petróleo), fracción ligera reformada catalíticamente ; Nafta reformada catalíticamente de baja temperatura de inflamación  
[Combinación compleja de hidrocarburos producida de la destilación de productos de un proceso de reformado catalítico. Compuesta de hidrocarburos con un número de carbonos en su mayor parte dentro del intervalo de  $C_7$  a  $C_{11}$ , y con un intervalo de ebullición aproximado de 35 °C a 190 °C. Contiene una proporción relativamente grande de hidrocarburos aromáticos de cadena ramificada. Esta corriente contiene un 10% en volumen o más de benceno]
- DA : naphtha (råolie), let katalytisk reformeret ; Lavkogende katalytisk reformeret nafta  
[En sammensat blanding af carbonhydnder fremstillet fra destillation af produkterne fra en katalytisk reformeringsproces. Den består af carbonhydnder, overvejende  $C_7$  til og med  $C_{11}$ , med kogesinterval omtrent fra 35 °C til 190 °C. Den indeholder en forholdsvis stor del aromatiske og forgrenede carbonhydnder. Denne strøm kan indeholde 10 volumenprocent, eller mere, benzen.]
- DE : Naphtha (Erdöl), leichte katalytisch gekrackte ; Reformat  
[Komplexe Kombination von Kohlenwasserstoffen, hergestellt durch Destillation von Produkten aus einem katalytischen Reformingverfahren. Besteht aus Kohlenwasserstoffen mit Kohlenstoffzahlen vorherrschend im Bereich von  $C_7$  bis  $C_{11}$  und siedet im Bereich von etwa 35°C bis 190°C. Enthält eine relativ große Menge aromatischer Kohlenwasserstoffe und Kohlenwasserstoffe mit verzweigter Kette. Dieser Lauf kann 10 Gewichtsprozent oder mehr Benzol enthalten]
- EL : ναφθα (πετρελαίου), ελαφρά καταλυτικά αναμορφωμένη ; Ελαφρά νάφθα από καταλυτική διάσπαση  
[Πολυπλοκός συνδυασμός υδρογονανθράκων που παραγεται από την αποσταξη προϊόντων καταλυτικής αναμόρφωσης. Συνίσταται από υδρογονανθράκες με αριθμό ατόμων άνθρακα κυρίως στην περιοχή από  $C_7$  έως και  $C_{11}$ , και με περιοχή βρασμού από 35 °C έως 190 °C περίπου. Περιέχει σχετικά μεγάλη αναλογία αρωματικών και διακλαδισμένης αλυσού υδρογονανθράκων. Το ρεύμα αυτό μπορεί να περιέχει 10 % κατ' όγκον ή περισσότερο βενζόλιο.]
- EN : Naphtha (petroleum), light catalytic reformed ; Low boiling point cat-reformed naphtha  
[A complex combination of hydrocarbons produced from the distillation of products from a catalytic reforming process. It consists of hydrocarbons having carbon numbers predominantly in the range of  $C_7$  through  $C_{11}$  and boiling in the range of approximately 35 °C to 190 °C (95 °F to 374 °F). It contains a relatively large proportion of aromatic and branched chain hydrocarbons. This stream may contain 10 vol. % or more benzene]
- FR : naphtha léger (pétrole), reformage catalytique ; Naphta de reformage catalytique à point d'ébullition bas  
[Combinaison complexe d'hydrocarbures obtenue par distillation des produits résultant d'un reformage catalytique. Se compose d'hydrocarbures dont le nombre de carbones se situe principalement dans la gamme  $C_7$ - $C_{11}$  et dont le point d'ébullition est compris approximativement entre 35°C et 190°C. Renferme une proportion relativement importante d'hydrocarbures aromatiques et d'hydrocarbures à chaîne ramifiée. Peut contenir 10 % ou plus, en volume, de benzène.]
- IT : nafta (petrolio), frazioni leggere di reforming catalitico ; Nafta di reforming catalitico con basso punto di ebollizione  
[Combinazione complessa di idrocarburi ottenuta per distillazione di prodotti provenienti da un processo di reforming catalitico. E' costituita da idrocarburi con numero di atomi di carbonio prevalentemente nell'intervallo  $C_7$ - $C_{11}$  e punto di ebollizione nell'intervallo 35 °C - 190 °C ca. Contiene una percentuale relativamente alta di idrocarburi a catena ramificata. Questo taglio di distillazione può contenere il 10% o più di benzolo in volume.]
- NL : nafta (aardolie), licht katalytisch gereformeerd ; Katalytisch veredelde nafta met laag kookpunt  
[Een complexe verzameling koolwaterstoffen, verkregen uit de destillatie van producten van een katalytisch reformeringsproces. Bestaat uit koolwaterstoffen, overwegend  $C_7$  tot en met  $C_{11}$ , met een kooktraject van ongeveer 35°C tot 190°C. Bevat een relatief groot deel aromatische en vertakte koolwaterstoffen. Deze stroom kan 10 of meer volumepercenten benzeen bevatten.]
- PT : nafta (petróleo), leve do reforming catalítico ; Reformado  
[Uma combinação complexa de hidrocarbonetos produzida a partir da destilação de produtos de um processo de reforming catalítico. E é constituída por hidrocarbonetos com números de átomos de carbono predominantemente na gama de  $C_7$  ate  $C_{11}$ , e destila no intervalo de aproximadamente 35°C a 190°C. Contém uma proporção relativamente elevada de hidrocarbonetos aromáticos e de cadeia ramificada. Esta fracção pode conter 10% em volume ou mais de benzeno]

[A complex combination of hydrocarbons obtained from distillation of products from a catalytic reforming process. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of  $C_4$  through  $C_9$  and boiling in the range of approximately 35 °C to 120 °C (95 °F to 248 °F). It contains a relatively large proportion of branched chain hydrocarbons with the aromatic components removed.]
- FR : naphtha léger de reformage catalytique (pétrole), désaromatisé ; Naphtha de reformage catalytique à point d'ébullition bas  
[Combinaison complexe d'hydrocarbures obtenue par distillation des produits résultant d'un reformage catalytique. Se compose principalement d'hydrocarbures dont le nombre de carbones se situe en majorité dans la gamme  $C_4$ - $C_9$  et dont le point d'ébullition est compris approximativement entre 35 °C et 120 °C. Contient une proportion relativement importante d'hydrocarbures à chaînes ramifiées dont les composants aromatiques ont été éliminés.]
- IT : nafta (petrolio), taglio leggero di reforming catalitico, privi di composti aromatici ; Nafta di reforming catalitico con basso punto di ebollizione  
[Combinazione complessa di idrocarburi prodotta per distillazione dei prodotti provenienti da un processo di reforming catalitico. È costituita prevalentemente da idrocarburi con numero di atomi di carbonio prevalentemente nell'intervallo  $C_4$ - $C_9$  e punto di ebollizione nell'intervallo 35 °C-120 °C ca. Contiene una percentuale relativamente alta di idrocarburi a catena ramificata dai quali sono stati separati i componenti aromatici.]
- NL : nafta (aardolie), lichte katalytisch gereformeerde, aromaat-vrij ; Katalytisch veredelde nafta met laag kookpunt  
[Een complexe verzameling koolwaterstoffen, verkregen uit de destillatie van producten uit een katalytisch reformeringsproces. Bestaat voornamelijk uit koolwaterstoffen, overwegend  $C_4$  tot en met  $C_9$ , met een kooktraject van ongeveer 35 °C tot 120 °C. Bevat een relatief grote hoeveelheid vertakte koolwaterstoffen waarbij de aromatische bestanddelen zijn verwijderd.]
- PT : nafta (petróleo), leve do reforming catalítico, sem aromáticos ; Reformado  
[Uma combinação complexa de hidrocarbonetos obtida da destilação dos produtos de um processo de reforming catalítico. É constituída predominantemente por hidrocarbonetos com números de átomos de carbono predominantemente na gama de  $C_4$  até  $C_9$  e destila no intervalo de aproximadamente 35 °C a 120 °C. Contém uma proporção relativamente elevada de hidrocarbonetos de cadeia ramificada de que foram removidos os componentes aromáticos.]

[Een complexe verzameling koolwaterstoffen die wordt verkregen door het onderwerpen van een aardoliedestillaat uit het thermisch kraken bij hoge temperatuur van zware oliefracties aan een stankverwijderingsproces om mercaptanen om te zetten. Bestaat voornamelijk uit aromaten, olefinen en verzadigde koolwaterstoffen en heeft een kooktraject van ongeveer 20 °C tot 100 °C.]
- PT : nafta (petróleo), leve, do cracking térmico, tratada (sweetened) ; Nafta de « cracking » térmico de baixo ponto de ebulição  
[Uma combinação complexa de hidrocarbonetos obtida submetendo um destilado petrolífero do cracking térmico a temperatura elevada de fracções petrolíferas pesadas a um processo de sweetening par converter mercaptans. É constituída predominantemente por hidrocarbonetos aromáticos, olefinas e hidrocarbonetos saturados que destilam no intervalo de aproximadamente 20 °C a 100 °C.]

- EN** Naphtha (petroleum), hydrodesulfurized full-range. Low boiling point hydrogen treated naphtha  
[A complex combination of hydrocarbons obtained from a catalytic hydrodesulfurization process. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of  $C_4$  through  $C_{11}$ , and boiling in the range of approximately 30 °C to 250 °C (86 °F to 482 °F)]
- FR** naphta a large intervalle de distillation (pétrole), hydrodesulfure. Naphta hydrotraite a point d'ébullition bas  
[Combinaison complexe d'hydrocarbures obtenue par une hydrodesulfuration catalytique. Se compose principalement d'hydrocarbures dont le nombre de carbones se situe en majorité dans la gamme  $C_4$ - $C_{11}$ , et dont le point d'ébullition est compris approximativement entre 30 °C et 250 °C]
- IT** nafta (petrolio), gamma completa idrodesolforata. Nafta di "hydrotreating" con basso punto di ebollizione  
[Combinazione complessa di idrocarburi ottenuta da un processo di idrodesolforazione catalitico. È costituita prevalentemente da idrocarburi con un numero di atomi di carbonio prevalentemente nell'intervallo  $C_4$ - $C_{11}$ , e con punto di ebollizione nell'intervallo 30 °C - 250 °C ca.]
- NL** nafta (aardolie), waterstofontzwaveld totaal bereik. Gehydrogeneerde nafta met laag kookpunt  
[En complexe verzameling koolwaterstoffen die wordt verkregen uit een katalytisch waterstofontzwapelingsproces. Bestaat voornamelijk uit koolwaterstoffen overwegend  $C_4$  tot en met  $C_{11}$ , met een kooktraject van ongeveer 30 °C tot 250 °C]
- PT** nafta (petróleo), de carga hidrogenodessulfurizada. Nafta desulfurada de baixo ponto de ebulição  
[Uma combinação complexa de hidrocarbonetos obtida de um processo de hidrogenodessulfuração catalítica. É constituída predominantemente por hidrocarbonetos com números de átomos de carbono predominantemente na gama de  $C_4$  até  $C_{11}$ , e destila no intervalo de aproximadamente 30 °C a 250 °C]

- EL** ναφθα (πετρελαίου), ελαφρά ατμοπυρολυμένη· Ελαφρά νάφθα — μη προδιαγεγραμμένη  
[Πολύπλοκος συνδυασμός υδρογονανθράκων που λαμβάνεται με την απόσπαση των προϊόντων ατμοπυρόλυσης. Συνίσταται κυρίως από ακόρεστους υδρογονάνθρακες με αριθμό ατόμων άνθρακα κυρίως στην περιοχή από  $C_4$  ως και  $C_{11}$  και δράζει στην περιοχή από μείον 20 °C ως 190 °C περίπου. Το ρεύμα αυτό συνήθως περιέχει 10 % κατ' όγκο ή και περισσότερο βενζόλιο.]
- EN** Naphtha (petroleum), light steam-cracked, Low boiling point naphtha — unspecified  
[A complex combination of hydrocarbons obtained by the distillation of the products from a steam cracking process. It consists predominantly of unsaturated hydrocarbons having carbon numbers predominantly in the range of  $C_4$  through  $C_{11}$  and boiling in the range of approximately minus 20 °C to 190 °C (−4 °F to 374 °F). This stream is likely to contain 10 vol. % or more benzene.]
- FR** naphta léger (pétrole), vapocraquage, Naphta a point d'ébullition bas — non spécifié  
[Combinaison complexe d'hydrocarbures obtenue par distillation des produits résultant d'un vapocraquage. Se compose principalement d'hydrocarbures insaturés dont le nombre de carbones se situe en majorité dans la gamme  $C_4$ - $C_{11}$ , et dont le point d'ébullition est compris approximativement entre −20 °C et 190 °C. Peut contenir 10 % ou plus, en volume, de benzène.]
- IT** nafta (petrolio), leggera crackizzata con vapore acqueo, Nafta con basso punto di ebollizione — non specificata  
[Combinazione complessa di idrocarburi ottenuta dalla distillazione dei prodotti provenienti da un processo di cracking con vapore d'acqua. È costituita prevalentemente da idrocarburi insaturi con numero di atomi di carbonio prevalentemente nell'intervallo  $C_4$ - $C_{11}$ , e punto di ebollizione nell'intervallo −20 °C 190 °C. Questa frazione può contenere il 10 % o più di benzene in volume.]
- NL** nafta (aardolie), licht stoomgekraakt, Nafta met laag kookpunt — niet gespecificeerd  
[Een complexe verzameling koolwaterstoffen, verkregen door de destillatie van de produkten van een stoomkraakproces. Bestaat voornamelijk uit onverzadigde koolwaterstoffen, overwegend  $C_4$  tot en met  $C_{11}$ , met een kooktraject van ongeveer −20 °C tot 190 °C. Deze stroom bevat waarschijnlijk 10 of meer volumepercenten benzeen.]
- PT** nafta (petróleo), leve do steam-cracking, Nafta de baixo ponto de ebulição — não especificada  
[Uma combinação complexa de hidrocarbonetos obtida por destilação dos produtos de um processo de steam-cracking. É constituída predominantemente por hidrocarbonetos insaturados com números de átomos de carbono predominantemente na gama de  $C_4$  até  $C_{11}$ , e destila no intervalo de aproximadamente menos 20 °C a 190 °C. Esta fracção geralmente contém 10 % em volume ou mais de benzeno.]

- ES extractos (petroleo), acido-en frio,  $C_{4-6}$ , Nafta de baja temperatura de inflamación, sin especificar  
[Combinación compleja de compuestos orgánicos producida por la extracción en la unidad de acido en frio de hidrocarburos alifáticos saturados e insaturados normalmente con un numero de carbonos dentro del intervalo de  $C_3$  a  $C_6$  fundamentalmente pentanos y amilenos. Compuesta de hidrocarburos saturados e insaturados con un numero de carbonos dentro del intervalo de  $C_3$  a  $C_6$ , pncipalmente  $C_5$ ]
- DA ekstrakter (råolie), koldsyre-,  $C_{4-6}$ , Lavtkogende uspecifiseret nafta  
[En sammensat blanding af organiske forbindelser, fremstillet ved koldsyre-enhedsekstraktion af mættede og umættede, aliphatiske carbonhydnder, sædvanligvis  $C_3$  til og med  $C_6$ , overvejende pentaner og amylenes. Den består overvejende af mættede og umættede carbonhydnder,  $C_3$  til og med  $C_6$ , overvejende  $C_5$ ]
- DE Extrakte (Erdöl), Kalt-Säure,  $C_{4-6}$  Naphtha, niedrig siedend, nicht spezifiziert  
[Komplexe Kombination organischer Verbindungen, hergestellt durch Extraktion gesättigter und ungesättigter aliphatischer Kohlenwasserstoffe mit Kohlenstoffzahlen, die gewöhnlich von  $C_3$  bis  $C_6$  reichen, vorherrschend von Pentanen und Amylenen, in einer Kalt-Säureanlage. Besteht vorherrschend aus gesättigten und ungesättigten Kohlenwasserstoffen mit Kohlenstoffzahlen im Bereich von  $C_3$  bis  $C_6$ , vorherrschend  $C_5$ ]
- EL Εκχυλίσματα (πετρελαίου), εν ψυχρώ με οξύ,  $C_{4-6}$  Ελαφρά ναφθα — μη προδιαγεγραμμένη  
[Πολύπλοκος συνδυασμός οργανικών ενώσεων που παραγεται με εκχυλιση σε μονάδα οξέος εν ψυχρώ κορεσμένων και ακορεστων αλειφατικών υδρογονάνθρακων με αριθμό ατόμων άνθρακα που συνήθως κυμαίνεται από  $C_3$  ως και  $C_6$ , κυρίως πεντάνια και αμυλένια. Συνίσταται κυρίως από κορεσμένους και ακόρεστους υδρογονάνθρακες με αριθμό ατόμων άνθρακα στην περιοχή από  $C_3$  ως και  $C_6$ , κυρίως  $C_5$ ]
- EN Extracts (petroleum), cold-acid,  $C_{4-6}$  Low boiling point naphtha — unspecified  
[A complex combination of organic compounds produced by cold acid unit extraction of saturated and unsaturated aliphatic hydrocarbons usually ranging in carbon numbers from  $C_3$  through  $C_6$ , predominantly pentanes and amylenes. It consists predominantly of saturated and unsaturated hydrocarbons having carbon numbers in the range of  $C_3$  through  $C_6$ , predominantly  $C_5$ ]
- FR extraits à l'acide à froid en  $C_{4-6}$  (pétrole) Naphta à point d'ébullition bas — non spécifié  
[Combinaison complexe de composés organiques produite par extraction acide à froid d'hydrocarbures aliphatiques saturés et insaturés dont le nombre de carbones varie habituellement de  $C_3$  à  $C_6$ , principalement des pentanes et des amylenes en majorité. Se compose principalement d'hydrocarbures saturés et insaturés dont le nombre de carbones se situe dans la gamme  $C_{4-6}$ , surtout en  $C_5$ ]
- IT estratti (petrolio), estrazione acida a freddo,  $C_{4-6}$  Nafta con basso punto di ebollizione — non specificata  
[Combinazione complessa di composti organici prodotta per estrazione acida a freddo di idrocarburi alifatici saturi e insaturi con numero di atomi di carbonio solitamente nell'intervallo  $C_{4-6}$ , prevalentemente pentani e amileni. È costituita prevalentemente da idrocarburi saturi e insaturi con numero di atomi di carbonio nell'intervallo  $C_{4-6}$ , prevalentemente  $C_5$ ]
- NL extracten (aardolie), koudzuur,  $C_{4-6}$  Nafta met laag kookpunt — niet gespecificeerd  
[Een complexe verzameling organische verbindingen, gevormd door koudzuur-installatie-extractie van verzadigde en onverzadigde alifatische koolwaterstoffen, gewoonlijk  $C_3$  tot en met  $C_6$ , voornamelijk pentanen en amylenen. Bestaat voornamelijk uit verzadigde en onverzadigde koolwaterstoffen,  $C_3$  tot en met  $C_6$ , overwegend  $C_5$ ]
- PT extractos (petróleo), da extracção a frio com acido,  $C_{4-6}$ , Nafta de baixo ponto de ebulição — não especificada  
[Uma combinação complexa de compostos orgânicos produzida pela extracção a frio com acido de hidrocarbonetos alifáticos saturados e insaturados com numeros de átomos de carbono geralmente na gama de  $C_3$  ate  $C_6$ , predominantemente pentanos e amilenos. É constituída predominantemente por hidrocarbonetos saturados e insaturados com numeros de átomos de carbono na gama de  $C_3$  ate  $C_6$ , predominantemente  $C_5$ ]

NOTA H

NOTA P

- ES** nafta (petroleo), serie completa de primera destilación tratada con arcilla. Nafta de baja temperatura de inflamación, sin especificar  
[Combinación compleja de hidrocarburos resultante del tratamiento de la serie completa de nafta de primera destilación con arcilla natural o modificada, normalmente en un proceso de percolación para separar las trazas presentes de compuestos polares e impurezas. Compuesta de hidrocarburos con un número de carbonos en su mayor parte dentro del intervalo de  $C_4$  a  $C_{11}$  y con un intervalo de ebullición aproximado  $-20\text{ }^{\circ}\text{C}$  a  $220\text{ }^{\circ}\text{C}$ ]
- DA** naphtha (råolie), lerbehandlet full-range straight-run. Lavtkogende uspecificeret nafta  
[En sammensat blanding af carbonhydnder fremkommer ved behandling af full-range straight-run naphtha med naturligt eller modificeret ler, sædvanligvis i en perkoleringsproces til fjernelse af spormængderne af polære forbindelser og de tilstedeværende urenheder. Den består af carbonhydnder, overvejende  $C_4$  til og med  $C_{11}$ , med kogesinterval omtrent fra  $-20\text{ }^{\circ}\text{C}$  til  $220\text{ }^{\circ}\text{C}$ ]
- DE** Naphtha (Erdöl), Ton-behandelte gesamte straight-run. Naphtha, niedrig siedend, nicht spezifiziert  
[Komplexe Kombination von Kohlenwasserstoffen, entsteht durch Behandeln der gesamten straight-run Naphtha mit natürlichem oder modifiziertem Ton, gewöhnlich in einem Perkulationsverfahren zum Entfernen von Spuren polarer Verbindungen und von vorhandenen Verunreinigungen. Besteht aus Kohlenwasserstoffen mit Kohlenstoffzahlen vorherrschend im Bereich von  $C_4$  bis  $C_{11}$  und siedet im Bereich von etwa  $-20\text{ }^{\circ}\text{C}$  bis  $220\text{ }^{\circ}\text{C}$ ]
- EL** ναφθα (πετρελαιο), πηλρους συστασης και απευθείας απόσταξης κατεργασμένη με άργιλλο. Ελαφρά ναφθα — μη προδιαγεγραμμένη  
[Πολυπλοκός συνδυασμός υδρογονανθράκων που προκύπτει από την κατεργασία ναφθας απευθείας απόσταξης και πηλρους συστασης με φυσική ή τροποποιημένη άργιλλο, συνήθως με μέθοδο φιλτραρίσματος για την απομάκρυνση των ιχνών πολικών ενώσεων και ακαθαρσιών που ενυπάρχουν. Συνίσταται από υδρογονάνθρακες με αριθμό ατόμων άνθρακα κυρίως στην περιοχή από  $C_4$  ως και  $C_{11}$  και βράζει στην περιοχή από  $-20\text{ }^{\circ}\text{C}$  ως  $220\text{ }^{\circ}\text{C}$  περίπου]
- EN** Naphtha (petroleum), clay-treated full-range straight-run. Low boiling point naphtha — unspecified  
[A complex combination of hydrocarbons resulting from treatment of full range straight-run naphtha with natural or modified clay, usually in a percolation process to remove the trace amounts of polar compounds and impurities present. It consists of hydrocarbons having carbon numbers predominantly in the range of  $C_4$  through  $C_{11}$  and boiling in the range of approximately  $-20\text{ }^{\circ}\text{C}$  to  $220\text{ }^{\circ}\text{C}$  ( $-4\text{ }^{\circ}\text{F}$  to  $429\text{ }^{\circ}\text{F}$ )]
- FR** naphtha de distillation directe a large intervalle d'ébullition (petrole), traite a la terre. Naphtha a point d'ébullition bas — non specific  
[Combinaison complexe d'hydrocarbures resultant du traitement de naphtha de distillation directe a large intervalle d'ébullition avec de l'argile naturelle ou modifiée, généralement par percolation pour éliminer les traces de composés polaires et d'impuretés. Se compose d'hydrocarbures dont le nombre de carbones se situe en majorité dans la gamme  $C_4$ ,  $C_{11}$  et dont le point d'ébullition est compris approximativement entre  $-20\text{ }^{\circ}\text{C}$  et  $220\text{ }^{\circ}\text{C}$ ]
- IT** nafta (petrolio), prima distillazione, gamma completa di frazioni, trattata con argilla. Nafta con basso punto di ebollizione — non specificata  
[Combinazione complessa di idrocarburi risultante dal trattamento con argilla naturale o modificata della gamma completa di frazioni di nafta di prima distillazione, solitamente in un processo di percolazione, per separare le tracce di composti polari ed impurezze presenti. È costituita da idrocarburi con numero di atomi di carbonio prevalentemente nell'intervallo  $C_4$ - $C_{11}$  e con punto di ebollizione nell'intervallo da  $-20\text{ }^{\circ}\text{C}$  a  $220\text{ }^{\circ}\text{C}$  ca.]
- NL** nafta (aardolie), met klei behandelde totaal bereik van direct door fractionering verkregen, Nafta met laag kookpunt — niet gespecificeerd  
[Een complexe verzameling koolwaterstoffen die wordt verkregen uit de behandeling van de totaal bereik van direct door fractionering verkregen nafta met natuurlijke of gemodificeerde klei in een contact- of een filtratieproces waarbij aanwezige sporen van polaire verbindingen en onzuiverheden worden verwijderd. Bestaat uit koolwaterstoffen, overwegende  $C_4$  tot en met  $C_{11}$ , met een kooktraject van ongeveer  $-20\text{ }^{\circ}\text{C}$  tot  $220\text{ }^{\circ}\text{C}$ ]
- PT** nafta (petroleo), carga de destilação directa tratada com argila, Nafta de baixo ponto de ebulição — não especificada  
[Uma combinação complexa de hidrocarbonetos resultante do tratamento de nafta de destilação directa com argila natural ou modificada, normalmente por um processo de percolação para remoção de vestígios de compostos polares e impurezas presentes. É constituída por hidrocarbonetos com numeros de atomos de carbono predominantemente na gama de  $C_4$  ate  $C_{11}$  e destila no intervalo de aproximadamente  $-20\text{ }^{\circ}\text{C}$  a  $220\text{ }^{\circ}\text{C}$ ]

Compuesta de hidrocarburos con un numero de carbonos en su mayor parte superior a C<sub>4</sub>.
- DA benzin, pyrolyse-, debutanizer-bundfraktioner. Lavtkogende uspeciticeret nafta. En sammensat blanding af carbonhydroer opnaet ved fraktioneringen af depropanizer-bundfraktioner. Den består af carbonhydroer overvejende større end C<sub>4</sub>.
- DE Benzin, Pyrolyse, Entbutanisierer Boden. Naphtha, niedrig siedend, nicht spezifiziert. [Komplexe Kombination von Kohlenwasserstoffen, erhalten durch Fraktionierung der Bodenprodukte des Entpropanisierers. Besteht aus Kohlenwasserstoffen mit Kohlenstoffzahlen vorherrschend größer als C<sub>4</sub>.]
- EL βενζίνα, πυρολυσης, προϊόντων πυθμένα αποδουτανιωτήρα. Ελαφρά ναφθα — μη προδιαγεγραμμένη. Πολυπλοκός συνδυασμός υδρογονανθράκων που λαμβάνεται από την κλασμάτωση προϊόντων πυθμένα αποδουτανιωτήρα. Συνίσταται από υδρογονάνθρακες με αριθμό ατόμων άνθρακα σημαντικά μεγαλύτερο από C<sub>4</sub>.
- EN Gasoline pyrolysis, debutanizer bottoms. Low boiling point naphtha — unspecified. [A complex combination of hydrocarbons obtained from the fractionation of depropanizer bottoms. It consists of hydrocarbons having carbon numbers predominantly greater than C<sub>4</sub>.]
- FR essence de pyrolyse, residus de depropaniseur. Naphta a point d'ébullition bas — non spécifié. [Combinaison complexe d'hydrocarbures obtenue par fractionnement des résidus du depropaniseur. Se compose d'hydrocarbures dont le nombre de carbones est en majorité supérieur a C<sub>4</sub>.]
- IT benzina pirolisi, frazioni residue del debutanizzatore. Nafta con basso punto di ebollizione — non specificata. [Combinazione complessa di idrocarburi ottenuta dal frazionamento di residui del depropanizzatore. È costituita da idrocarburi con numero di atomi di carbonio prevalentemente superiore a C<sub>4</sub>.]
- NL gasolie, pyrolyse, debutanisator-bodemfracties. Nafta met laag kookpunt — niet gespecificeerd. [Een complexe verzameling koolwaterstoffen die wordt verkregen uit de fractionering van depropanisator-bodemfracties. Bestaat uit koolwaterstoffen overwegend groter dan C<sub>4</sub>.]
- PT gasolina, de pirolise, produtos de cauda do desbutanizador. Nafta de baixo ponto de ebulição — não especificada. [Uma combinação complexa de hidrocarbonetos obtida pelo fracionamento dos produtos de cauda do despropanizador. É constituída por hidrocarbonetos com numeros de atomos de carbono predominantemente superiores a C<sub>4</sub>.]

NOTA I

- ES nafta (petróleo), ligera, desazufrada Nafta de baja temperatura de inflamación, sin especificar  
[Combinación compleja de hidrocarburos obtenida sometiendo un destilado de petróleo a un proceso de desazufrado para transformar mercaptanos o separar impurezas ácidas. Compuesta fundamentalmente de hidrocarburos saturados e insaturados con un número de carbonos en su mayor parte dentro del intervalo de  $C_1$  a  $C_6$  y con un intervalo de ebullición aproximado de  $-20\text{ }^{\circ}\text{C}$  a  $100\text{ }^{\circ}\text{C}$ ]
- DA naphtha (råolie), let sweetenet lavtkogende uspecificeret nafta  
[En sammensat blanding af carbonhydrider opnaet ved at underkaste et råoliedestillat en sweeteningsproces for at fjerne mercaptaner eller fjerne sure urenheder. Den består overvejende af mættede og umættede carbonhydrider, overvejende  $C_1$  til og med  $C_6$ , med koginterval omfrent fra  $-20\text{ }^{\circ}\text{C}$  til  $100\text{ }^{\circ}\text{C}$ ]
- DE Naphtha (Erdöl) leicht gesußt Naphtha, niedrig siedend, nicht spezifiziert  
[Komplexe Kombination von Kohlenwasserstoffen, erhalten durch Aussetzen eines Erdöldestillates einem Süßungsverfahren zur Konvertierung von Mercaptanen oder zum Entfernen saurer Verunreinigungen. Besteht vorherrschend aus gesättigten und ungesättigten Kohlenwasserstoffen mit Kohlenstoffzahlen vorherrschend im Bereich von  $C_1$  bis  $C_6$  und siedet im Bereich von etwa  $-20\text{ }^{\circ}\text{C}$  bis  $100\text{ }^{\circ}\text{C}$ ]
- EL ναφθα (πετρελαιο), ελαφρά, γλυκασμένη Ελαφρά ναφθα — μη προδιαγεγραμμένη  
[Πολυπλοκός συνδυασμός υδρογονανθράκων που λαμβάνεται όταν αποσταγματίζεται πετρελαιο υποβάλλεται σε κατεργασία γλυκανσης, για να μετατραπούν μερκαπτανες ή για να απομακρυνθούν οξιδικές ρυπανσεις. Συνίσταται κυρίως από κορεσμένους και ακόρεστους υδρογονανθράκες με αριθμό ατόμων άνθρακα κυρίως στην περιοχή από  $C_1$  ως και  $C_6$  και βράζει στην περιοχή από  $-20\text{ }^{\circ}\text{C}$  ως  $100\text{ }^{\circ}\text{C}$  περίπου.]
- EN Naphtha (petroleum), light, sweetened Low boiling point naphtha — unspecified  
[A complex combination of hydrocarbons obtained by subjecting a petroleum distillate to a sweetening process to convert mercaptans or to remove acidic impurities. It consists predominantly of saturated and unsaturated hydrocarbons having carbon numbers predominantly in the range of  $C_1$  through  $C_6$  and boiling in the range of approximately  $-20\text{ }^{\circ}\text{C}$  to  $100\text{ }^{\circ}\text{C}$  ( $-4\text{ }^{\circ}\text{F}$  to  $212\text{ }^{\circ}\text{F}$ )]
- FR naphtha léger adouci (pétrole) Naphtha a point d'ébullition bas — non spécifié  
[Combinaison complexe d'hydrocarbures obtenue par adoucissement d'un distillat pétrolier, afin de convertir les mercaptans ou d'éliminer les impuretés acides. Se compose principalement d'hydrocarbures saturés et insaturés dont le nombre de carbones se situe en majorité dans la gamme  $C_1$ ,  $C_6$  et dont le point d'ébullition est compris approximativement entre  $-20\text{ }^{\circ}\text{C}$  et  $100\text{ }^{\circ}\text{C}$ ]
- IT nafta (petrolio), frazione leggera, addolcita Nafta con basso punto di ebollizione — non specificata  
[Combinazione complessa di idrocarburi ottenuta sottoponendo un disillato di petrolio ad un processo di addolcimento per convertire i mercaptani o eliminare impurezze acide. È costituita prevalentemente da idrocarburi saturi e insaturi con numero di atomi di carbonio prevalentemente nell'intervallo  $C_1$ - $C_6$  e punto di ebollizione nell'intervallo da  $-20\text{ }^{\circ}\text{C}$  a  $100\text{ }^{\circ}\text{C}$  ca.]
- NL nafta (aardolie), licht, stankvrij gemaakt Nafta met laag kookpunt — niet gespecificeerd  
[Een complexe verzameling koolwaterstoffen, verkregen door het onderwerpen van een aardoliedestillaat aan een stankverwijderend proces, waarbij mercaptanen worden omgezet of zure onzuiverheden worden verwijderd. Bestaat voornamelijk uit verzadigde en onverzadigde koolwaterstoffen, overwegend  $C_1$  tot en met  $C_6$ , met een kooktraject van ongeveer  $-20\text{ }^{\circ}\text{C}$  tot  $100\text{ }^{\circ}\text{C}$ ]
- PT nafta (petróleo), leve, tratada (sweetened) Nafta de baixo ponto de ebulição — não especificada  
[Uma combinação complexa de hidrocarbonetos obtida por tratamento de uma fracção petrolífera por um processo de sweetening para conversão de mercaptanos ou remoção de impurezas ácidas. É constituída predominantemente por hidrocarbonetos saturados e insaturados com números de átomos de carbono predominantemente na gama de  $C_1$  até  $C_6$  e destila no intervalo de aproximadamente  $-20\text{ }^{\circ}\text{C}$  a  $100\text{ }^{\circ}\text{C}$ ]

- ES Condensados de gas natural. Nafta de baja temperatura de inflamación sin especificar  
[Combinación compleja de hidrocarburos separada y/o condensada del gas natural durante el transporte y recogida en la cabeza del pozo y/o de los gasoductos de producción, acumulación, transmisión y distribución en pozos profundos, depuradores, etc. Compuesta fundamentalmente de hidrocarburos con un número de carbonos en su mayor parte dentro del intervalo de C<sub>1</sub> a C<sub>4</sub>.]
- DA naturgaskondensater. Lavtkogende uspecificeret nafta  
[En sammensat branding af carbonhydnder separeret og/eller kondenseret fra naturgas under transport og optagning ved borehullet og/eller fra produktionen, opsamlings-, transmissions- og distributionspipelines i undergrunden, skrubbere etc. Den består overvejende af carbonhydnder, overvejende C<sub>1</sub> og med C<sub>2</sub>.]
- DE Erdgaskondensate. Naphtha, niedrig siedend, nicht spezifiziert  
[Komplexe Kombination von Kohlenwasserstoffen, abgetrennt und/oder kondensiert aus Erdgas während des Transportes und am Schachtkopf und/oder während der Produktion, beim Zusammenfügen, beim Übertragen und in Schächten, Waschern von Verteilungspipelines usw. gesammelt. Besteht vornehmlich aus Kohlenwasserstoffen mit Kohlenstoffzahlen vorherrschend im Bereich von C<sub>1</sub> bis C<sub>4</sub>.]
- EL φυσικού αερίου συμπυκνώματα. Ελαφρά ναφθα — μη προδιαγεγραμμένη  
[Πυκνός συνδυασμός υδρογονανθράκων που διαχωρίζεται ή/και συμπυκνώνεται από φυσικό αέριο κατά τη μεταφορά και που συλλέγεται στη φρεατοπαγίδα ή/και από την παραγωγή, συλλογή, μεταφορά και σωληνογραμμές διανομής σε φρέατα, καταστάσεις κτλ. Συνίσταται κυρίως από υδρογονανθράκες με αριθμό ατόμων άνθρακα κυρίως στην περιοχή C<sub>1</sub> ως και C<sub>4</sub>.]
- EN Natural gas condensates. Low boiling point naphtha — unspecified  
[A complex combination of hydrocarbons separated and/or condensed from natural gas during transportation and collected at the wellhead and/or from the production, gathering, transmission, and distribution pipelines in deeps, scrubbers, etc. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C<sub>1</sub> through C<sub>4</sub>.]
- FR gaz naturel, condensats. Naphta a point d'ébullition bas — non spécifique  
[Combinaison complexe d'hydrocarbures séparés et/ou condensés a partir de gaz naturel pendant son transport, et recueillis a la tête de puits et/ou dans les conduites de production, collecte, transmission et distribution, dans les zones basses, decanteurs, etc. Se compose principalement d'hydrocarbures dont le nombre de carbonos se situe en majorite dans la gamme C<sub>1</sub>-C<sub>4</sub>.]
- IT gas naturale, condensati. Nafta con basso punto di ebollizione — non specificata  
[Combinazione complessa di idrocarburi separata e/o condensata da gas naturale durante il trasporto e raccolta alla sommità del pozzo e/o dalle fasi operative di produzione, prelievo, trasmissione, e lungo le condotte di distribuzione, negli scrubbers, ecc. È costituita prevalentemente da idrocarburi con numero di atomi di carbonio prevalentemente nell'intervallo C<sub>1</sub>-C<sub>4</sub>.]
- NL aardgascondensaten. Nafta met laag kookpunt — niet gespecificeerd  
[Een complexe verzameling koolwaterstoffen die wordt afgescheiden en/of gecondenseerd uit aardgas tijdens transport en verzameld bij de putrand en/of de productie-, verzamel-, transmissie- en distributiepípijnen in putten, gaszuiveraars, enz. Bestaat voornamelijk uit C<sub>1</sub>- tot en met C<sub>4</sub>-koolwaterstoffen.]
- PT condesados de gas natural, Nafta de baixo ponto de ebulição — não especificada  
[Uma combinação complexa de hidrocarbonetos separada e/ou condensada do gas natural durante o transporte e recolhida na cabeça do poço e/ou da produção, recolha, transmissão, e condutas de distribuição em deeps, separadores, etc. É constituída predominantemente por hidrocarbonetos com numeros de atomos de carbono predominantemente na gama de C<sub>1</sub> ate C<sub>4</sub>.]

- ES nafta (petroleo), fracción ligera reformada catalíticamente, tracción libre de aromáticos. Nafta de baja temperatura de inflamación, sin especificar  
[Combinación compleja de hidrocarburos que queda después de separar los compuestos aromáticos de nafta ligera reformada catalíticamente en un proceso de absorción selectiva. Compuesta fundamentalmente de compuestos parafínicos y cíclicos con un número de carbonos en su mayor parte dentro del intervalo de  $C_6$  a  $C_{12}$  y con un intervalo de ebullición aproximado de 66 °C a 121 °C]
- DA naphtha (råolie), katalytisk reformeret let, aromattfri fraktion. Lavkogende uspecifiseret nafta  
[En sammensat blanding af carbonhydrogener tilbageblever efter fjernelse af aromatiske forbindelser fra katalytisk reformeret let naphtha i en selektiv absorptionsproces. Den består overvejende af paraffinske og cykliske forbindelser, overvejende  $C_6$  til  $C_{12}$ , med kogesinterval omtrent fra 66 °C til 121 °C]
- DE Naphtha (Erdöl), katalytisch reformierte leichte, Aromaten-freie Fraktion. Naphtha, niedrig siedend, nicht spezifiziert  
[Komplexe Kombination von Kohlenwasserstoffen, die nach Entfernen der aromatischen Verbindungen aus katalytisch reformierter leichter Naphtha in einem selektiven Absorptionsverfahren zurückbleibt. Besteht vorherrschend aus paraffinhaltigen und cyclischen Verbindungen mit Kohlenstoffzahlen vorherrschend im Bereich von  $C_6$  bis  $C_{12}$  und siedet im Bereich von etwa 66 °C bis 121 °C]
- EL ναφθα (πετρέλαιο), ελαφρά, καταλυτικά αναμορφωμένη, κλάσμα απαλλαγμένο αρωματικών. Ελαφρά ναφθα — μη προδιαγεγραμμένη  
[Πολυπλοκός συνδυασμός υδρογονανθράκων που παραμένει μετά την απομάκρυνση των αρωματικών ενώσεων από ελαφρή ναφθα που έχει υποστεί καταλυτική αναμόρφωση με μέθοδο εκλεκτικής απορρόφησης. Συνίσταται κυρίως από παραφινικές και κυκλικές ενώσεις με αριθμό ατόμων άνθρακα κυρίως στην περιοχή από  $C_6$  ως  $C_{12}$  και βράζει στην περιοχή από 66° C ως 121° C περίπου]
- EN Naphtha (petroleum), catalytic reformed light, arom-free fraction. Low boiling point naphtha — unspecified  
[A complex combination of hydrocarbons remaining after removal of aromatic compounds from catalytic reformed light naphtha in a selective absorption process. It consists predominantly of paraffinic and cyclic compounds having carbon numbers predominantly in the range of  $C_6$  to  $C_{12}$  and boiling in the range of approximately 66 °C to 121 °C (151 °F to 250 °F)]
- FR naphtha léger (pétrole), reformage catalytique, fraction sans aromatiques. Naphtha a point d'ébullition bas — non spécifique  
[Combinaison complexe d'hydrocarbures subsistant après l'élimination, par absorption sélective, des composés aromatiques d'un naphtha léger de reformage catalytique. Se compose principalement de composés paraffiniques et cycliques dont le nombre de carbones se situe en majorité dans la gamme  $C_6$ - $C_{12}$  et dont le point d'ébullition est compris approximativement entre 66 °C et 121 °C]
- IT nafta (petrolio), leggera da reforming catalitico, frazione priva di aromatici. Nafta con basso punto di ebollizione — non specificata  
[Combinazione complessa di idrocarburi rimanente dopo l'eliminazione di composti aromatici da nafta leggera riformata cataliticamente in un processo di assorbimento selettivo. È costituita prevalentemente da composti paraffinici e ciclici con numero di atomi di carbonio prevalentemente nell'intervallo  $C_6$ ,  $C_{12}$  e punto di ebollizione nell'intervallo 66 °C - 121 °C ca.]
- NL nafta (aardolie), katalytisch gereformeerde lichte fractie, aromaat-vrije fractie, Nafta met laag kookpunt — niet gespecificeerd  
[Een complexe verzameling koolwaterstoffen, overblijvend na verwijdering van aromatische verbindingen in een selectief absorptieproces uit katalytisch omgevormde lichte nafta. Het bestaat voornamelijk uit paraffinische en cyclische verbindingen, overwegend  $C_6$  tot  $C_{12}$ , met een kooktraject ongeveer 66 °C tot 121 °C]
- PT nafta (petroleo), leve do reforming catalítico, fracção sem aromáticos. Nafta de baixo ponto de ebulição — não especificada  
[Uma combinação complexa de hidrocarbonetos obtida após remoção de compostos aromáticos da nafta leve do reforming catalítico por um processo de absorção seletiva. É constituída predominantemente por compostos parafínicos e cíclicos com números de átomos de carbono predominantemente na gama de  $C_6$  até  $C_{12}$  e destila no intervalo de aproximadamente 66 °C a 121 °C]

nafta (petroleo) fracción ligera hidrodesulfurada, desaromatizada. Nafta de baja temperatura de inflamación, sin especificar

{Combinación compleja de hidrocarburos obtenida por destilación de fracciones ligeras de petróleo desaromatizadas e hidrodesulfuradas. Compuesta en su mayor parte de parafinas y cicloparafinas de C con un intervalo de ebullición aproximado de 90 °C a 100 °C }

- naphtha (fraktion) let hydrodesulfureret, dearomatiseret, lavkøgende uspecifiseret nafta

{En sammensætning af carbonhydrider opnået ved destillation af hydrodesulfureret og dearomatiseret lette raaffraktioner. Den består hovedsageligt af C paraffiner og cycloparaffiner med et kogepunktsinterval omkring fra 90 °C til 100 °C }

DE Naphtha (Erdöl) hydrodesulfuriert, leicht, dearomatisiert. Naphtha, niedrig siedend, nicht spezifiziert

{Komplexe Kombination von Kohlenwasserstoffen, die man durch Destillation von hydrodesulfurierten und dearomatisierten leichten Erdölfraktionen erhält. Besteht vorherrschend aus C Paraffinen und Cycloparaffinen und siedet im Bereich von etwa 90 °C bis 100 °C }

EL ναφθα (πετρέλαιο) υδρογονοαποδεδειγμένη, ελαφρά, αποαρωματισμένη. Ελαφρά ναφθα — μη προδιαγεγραμμένη. Πολύπλοκη συνδυασμός υδρογονανθράκων που λαμβάνεται με απόσταξη υδρογονοαποδεδειγμένων και αποαρωματισμένων ελαφρών κλάσματος πετρελαίου. Συνίσταται κυρίως από παραφίνες και κυκλοπαραφίνες C, και έχει τριτοξή βρασμού από 90 °C ως 100 °C περίπου }

EN Naphtha (petroleum), hydrodesulfurized, light, dearomatized, Low boiling point naphtha — unspecified

A complex combination of hydrocarbons obtained by distillation of hydrodesulfurized and dearomatized light petroleum fractions. It consists predominantly of C paraffins and cycloparaffins boiling in a range of approximately 90 °C to 100 °C (194 °F to 212 °F) }

FR naphtha léger (pétrole), hydrodesulfurée et desaromatisée. Naphta a point d'ébullition bas — non spécifique

Combinaison complexe d'hydrocarbures obtenue par distillation de fractions pétrolières légères hydrodesulfurées et desaromatisées. Se compose principalement de paraffines et de cycloparaffines en C, dont le point d'ébullition est compris approximativement entre 90 °C et 100 °C }

IT nafta (petrolio), leggera idrodesolfiorata, dearomatizzata. Nafta con basso punto di ebollizione — non specificata

{Combinazione complessa di idrocarburi ottenuta per distillazione di frazioni di petrolio leggere idrodesolfiorate e dearomatizzate. E costituita prevalentemente da C paraffine e cicloparaffine con punto di ebollizione nell'intervallo 90 °C-100 °C ca }

NL nafta (aardolie), met waterstof ontzwavelde, lichte, gedeaformiseerd. Nafta met laag kookpunt — niet gespecificeerd

{Een complexe verzameling koolwaterstoffen die wordt verkregen door destillatie van waterstofontzwavelde en gedeaformiseerde lichte aardoliefracties. Bestaat voornamelijk uit C paraffinen en cycloparaffinen en heeft een kooktraject van ongeveer 90 °C tot 100 °C }

PT nafta (petróleo) leve hidrogenodessulfurizada, desaromatizada. Nafta de baixo ponto de ebulição — não especificada

{Uma combinação complexa de hidrocarbonetos obtida por destilação de frações petrolíferas leves hidrogenodessulfurizadas e desaromatizadas. É constituída predominantemente por parafinas e cicloparafinas em C, e destila no intervalo de aproximadamente 90 °C a 100 °C }

nafta (petroleo) tracción ligera, rica en  $C_{10}$ , desazufrada. Nafta de baja temperatura de inflamación, sin especificar. Combinación compleja de hidrocarburos obtenida sometiendo nafta de petróleo a un proceso de desazufrado para transformar mercaptanos o separar impurezas ácidas. Compuesta de hidrocarburos con un número de carbonos fundamentalmente dentro del intervalo de  $C_4$  a  $C_{10}$  en su mayor parte de  $C_4$  y con un intervalo de ebullición aproximado de menos 10 °C a 35 °C.]

naphtha (frantiz. let.  $C_{10}$  rig. sweetenet. Lavtkogende uspeciticeret nafta

En sammensæt blanding af carbonhydnder opnæt ved at underkaste en råolienaphtha en sweetening-proces for at omdanne mercaptaner eller fjerne sure urenheder. Den består overvejende af carbonhydnder, overvejende  $C_{10}$  til og med  $C_{10}$  overvejende  $C_{10}$  med kogeinterval omtrent fra minus 10 °C til 35 °C.]

1. Naphtha (Erdöl), leicht,  $C_{10}$ -reich, gesußt. Naphtha, niedrig siedend, nicht spezifiziert

komplexe Kombination von Kohlenwasserstoffen, die man erhält, wenn man Erdölnaphtha einem Süßungsverfahren zur Konvertierung von Mercaptanen oder zum Entfernen saurer Verunreinigungen aussetzt. Besteht aus Kohlenwasserstoffen mit Kohlenstoffzahlen vorwiegend im Bereich von  $C_4$  bis  $C_{10}$  und siedet im Bereich von etwa minus 10 °C bis 35 °C.]

2. ναφθα (πετρέλαιου), ελαφρά, πλούσια σε  $C_{10}$ , γλυκασμένη. Ελαφρά ναφθα — μη προδιαγεγραμμένη

[Πολυπλοκός συνδυασμός υδρογονανθράκων που λαμβάνεται όταν ναφθα πετρελαιοι υποβάλλεται σε γλυκανση για να μετατραπούν οι μερκαπτανες ή να απομακρυνθούν οι οξίνες προσμίξεις. Συνίσταται από υδρογονανθρακες με αριθμό ατομών άνθρακα κυρίως στην περιοχή από  $C_4$  ως  $C_{10}$ , κυρίως  $C_{10}$ , και βράζει στην περιοχή από μείον 10 °C ως 35 °C περίπου.]

3. Naphtha (petroleum), light,  $C_{10}$ -rich, sweetened, Low boiling point naphtha — unspecified

A complex combination of hydrocarbons obtained by subjecting a petroleum naphtha to a sweetening process to convert mercaptans or to remove acidic impurities. It consists of hydrocarbons having carbon numbers predominantly in the range of  $C_4$  through  $C_{10}$ , predominantly  $C_{10}$ , and boiling in the range of approximately minus 10 °C to 35 °C (14 °F to 95 °F).]

4. naphta léger (petrole), riche en  $C_{10}$ , adouci. Naphta a point d'ébullition bas — non spécifié

Combinaison complexe d'hydrocarbures obtenue en soumettant un naphta pétrolier à un procédé d'adoucissement destiné à convertir les mercaptans ou à éliminer les impuretés acides. Se compose d'hydrocarbures dont le nombre de carbones se situe principalement dans la gamme  $C_4$ - $C_{10}$ , surtout en  $C_{10}$ , et dont le point d'ébullition est compris approximativement entre -10 °C et 35 °C.]

5. nafta (petrolio), leggera, ricca di  $C_{10}$ , addolcita. Nafta con basso punto di ebollizione — non specificata

Combinazione complessa di idrocarburi ottenuta sottoponendo una nafta di petrolio ad un processo di addolcimento per trasformare i mercaptani o per eliminare le impurezze acide. È costituita prevalentemente da idrocarburi con numero di atomi di carbonio prevalentemente nell'intervallo  $C_4$ - $C_{10}$ , prevalentemente  $C_{10}$  e con punto di ebollizione nell'intervallo -10 °C-35 °C ca.]

6. nafta (aardolie), licht,  $C_{10}$ -rijk, stankvrij gemaakt. Nafta met laag kookpunt — niet gespecificeerd

Een complexe verzameling koolwaterstoffen die wordt verkregen door het onderwerpen van een nafta uit aardolie aan een stank-erwijderingsproces waarbij mercaptanen worden omgezet of zure onzuiverheden worden verwijderd. Bestaat uit koolwaterstoffen, overwegend  $C_4$  tot en met  $C_{10}$ , hoofdzakelijk  $C_{10}$ , met een kooktraject van ongeveer -10 °C tot 35 °C.]

7. nafta (petroleo), leve, rica em  $C_{10}$ , tratada (sweetened). Nafta de baixo ponto de ebulição — não especificada

Uma combinação complexa de hidrocarbonetos obtida submetendo uma nafta petrolífera a um processo de sweetening para converter mercaptans ou para remover impurezas ácidas. É constituída por hidrocarbonetos com números de átomos de carbono predominantemente na gama  $C_4$  até  $C_{10}$ , predominantemente  $C_{10}$ , e destila no intervalo de aproximadamente menos 10 °C a 35 °C.]

- Ν Destilados (petróleo), ricos en  $C_{10}$ . Nafta de baja temperatura de inflamación, sin especificar  
Combinación compleja de hidrocarburos obtenida de la destilación de una reserva de petróleo. Compuesta en su mayor parte de hidrocarburos con un número de carbonos de  $C_7$  a  $C_{10}$ , ricos en  $C_{10}$ , y con un intervalo de ebullición aproximado de 60 °C a 70 °C.
- ΝΑ Destillater (råolie),  $C_{10}$ -rige, Lavtkogende uspecificeret nafta  
En sammensat blanding af carbonhydrider opnået ved destillation af rå råolie. Den består overvejende af carbonhydrider, overvejende  $C_7$  til og med  $C_{10}$ , rige på  $C_{10}$ , og kogesinterval omtrent fra 60 °C til 70 °C.
- ΝΕ Destillate (Erdöl),  $C_{10}$ -reich; Naphtha, niedrig siedend, nicht spezifiziert  
Komplexe Kombination von Kohlenwasserstoffen, die man durch Destillation aus Erdöl ausgangsstoffen erhält. Besteht vorherrschend aus Kohlenwasserstoffen mit Kohlenstoffzahlen von  $C_7$  bis  $C_{10}$ , reich an  $C_{10}$ , und siedet im Bereich von etwa 60 °C bis 70 °C.
- ΕΛΛΗΝΙΚΗ ΓΛΩΣΣΑ (πετρέλαιου), πλούσια σε  $C_{10}$  Ελαφρά νάφθα — μη προδιαγεγραμμένη  
Πολυσυμπλοκή συνδυασμός υδρογονανθράκων που λαμβάνεται με απόσπαση πρώτης ύλης από πετρέλαιο. Αποτελείται κυρίως από υδρογονάνθρακες με αριθμό ατόμων άνθρακα από  $C_7$  ως και  $C_{10}$ , είναι πλούσια σε  $C_{10}$  και δράζει στην περιοχή από 60 °C ως 70 °C περίπου.
- Ν Distillates (petroleum),  $C_{10}$ -rich, Low boiling point naphtha — unspecified  
Complex combination of hydrocarbons obtained from the distillation of a petroleum feedstock. It consists predominantly of hydrocarbons having carbon numbers of  $C_7$  through  $C_{10}$ , rich in  $C_{10}$ , and boiling in the range of approximately 60 °C to 70 °C [EN 296-90: (SR 96)].
- ΝΚ Distillats (petrole), riches en  $C_{10}$ , Naphta a point d'ébullition bas — non spécifiée  
Combinaison d'hydrocarbures complexe obtenue par distillation d'une charge de pétrole. Se compose principalement d'hydrocarbures dont le nombre de carbones se situe dans la gamme  $C_7$ - $C_{10}$ , riches en  $C_{10}$ , et dont le point d'ébullition varie approximativement entre 60 °C et 70 °C.
- Ι Distillati (petrolio), ricchi di  $C_{10}$ . Nafta con basso punto di ebollizione — non specificata  
Combinazione complessa di idrocarburi ottenuta dalla distillazione di un risormimento di petrolio. È costituita prevalentemente da idrocarburi con un numero di atomi di carbonio da  $C_7$  a  $C_{10}$ , ricchi di  $C_{10}$ , e punto di ebollizione nell'intervallo 60 °C-70 °C ca.].
- ΝΛ destillaten (aardolie),  $C_{10}$ -rijk, Nafta met laag kookpunt — niet gespecificeerd  
Een complexe verzameling koolwaterstoffen die wordt verkregen uit de destillatie van een aardoliegrondstof. Bestaat voornamelijk uit koolwaterstoffen, overwegend  $C_7$  tot en met  $C_{10}$ , rijk aan  $C_{10}$ , met een kooktraject van ongeveer 60 °C tot 70 °C.
- ΝΤ Destilados (petróleo), ricos em  $C_{10}$ . Nafta de baixo ponto de ebulição — não especificada  
Uma combinação complexa de hidrocarbonetos obtida da destilação de uma fração petrolífera. É constituída predominantemente por hidrocarbonetos com números de átomos de carbono de  $C_7$  até  $C_{10}$ , ricos em  $C_{10}$ , e destila no intervalo de aproximadamente 60 °C a 70 °C.

Besteht vorherrschend aus Kohlenwasserstoffen mit Kohlenstoffzahlen vorherrschend im Bereich von  $C_6$  bis  $C_8$  und siedet im Bereich von etwa 80 °C bis 135 °C]
- EL υδρογονάνθρακες,  $C_{6-8}$ , υδρογονωμένοι απαλλανμένοι αρωματικών με διαδικασία ροφήσης, από εξευγενισμό τολουολίου. Ελαφρά ναφθα — μη προδιαγεγραμμένη  
[Πολυπλοκός συνδυασμός υδρογονάνθρακων που λαμβάνεται κατά τη διαδικασία ροφήσεων τολουολίου από κλάσμα υδρογονάνθρακος πυρολύμενης βενζίνης, κατεργασμένης με υδρογόνο, παρουσία καταλύτη. Συνίσταται κυρίως από υδρογονάνθρακες με αριθμό ατόμων άνθρακα κυρίως στην περιοχή από  $C_6$  ως και  $C_8$  και με περιοχή βρασμού από 80° C ως 135° C περίπου]
- EN Hydrocarbons,  $C_{6-8}$ , hydrogenated sorption-dearomatized, toluene rafination, Low boiling point naphtha — unspecified  
[A complex combination of hydrocarbons obtained during the sorptions of toluene from a hydrocarbon fraction from cracked gasoline treated with hydrogen in the presence of a catalyst. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of  $C_6$  through  $C_8$  and boiling in the range of approximately 80 °C to 135 °C (176 °F to 275 °F)]
- FR hydrocarbures en  $C_{6-8}$ , hydrogenes et desaromatises par absorption, rafinage du toluene, Naphta a point d'ebullition bas — non specifique  
[Combinaison complexe d'hydrocarbures obtenue durant l'absorption du toluene derive d'une fraction petroliere a partir d'essence de craquage et traitee a l'hydrogene en presence d'un catalyseur. Se compose principalement d'hydrocarbures dont le nombre de carbonos se situe en majorite dans la gamme  $C_6$   $C_8$  et dont le point d'ebullition est compris approximativement entre 80 °C et 135 °C]
- IT idrocarburi,  $C_{6-8}$ , idrogenati dearomatizzati per assorbimento, raffinazione del toluene. Nafta con basso punto di ebollizione — non specificata  
[Combinazione complessa di idrocarburi ottenuta durante gli assorbimenti di toluene proveniente da una frazione idrocarbureica da benzina da cracking trattata con idrogeno in presenza di un catalizzatore. E' costituita prevalentemente da idrocarburi con numero di atomi di carbonio prevalentemente nell'intervallo  $C_6$   $C_8$  e punto di ebollizione nell'intervallo 80 °C 135 °C ca.]
- NL koolwaterstoffen,  $C_{6-8}$ , gehydrogeneerde door sorptie gedearomatiseerde, toluenraffinage. Nafta met laag kookpunt — niet gespecificeerd  
[Een complexe verzameling koolwaterstoffen die wordt verkregen tijdens de sorptie van toluen uit een koolwaterstoffractie uit gekraakte gasolie die behandeld is met waterstof in de aanwezigheid van een katalysator. Bestaat voornamelijk uit koolwaterstoffen overwegend  $C_6$  tot en met  $C_8$ , met een kooktraject van ongeveer 80 °C tot 135 °C]
- PT hidrocarbonetos,  $C_{6-8}$ , desaromatizados por absorção hidrogenados, da refinação de tolueno. Nafta de baixo ponto de ebulição — não especificada  
[Uma combinação complexa de hidrocarbonetos obtida durante absorção de tolueno de uma fração petrolífera de gasolina de cracking tratada com hidrogenio na presença de um catalisador. E' constituída predominantemente por hidrocarbonetos com número de átomos de carbono predominantemente na gama de  $C_6$  até  $C_8$  e destila no intervalo de aproximadamente 80 °C a 135 °C]

NOTA P

- ES nafta (petroleo), fraccion ligera desazutrada. Nafta de baja temperatura de inflamación, sin especificar  
[Combinación compleja de hidrocarburos obtenida sometiendo nafta de petróleo a un proceso de desazufrado para transformar los mercaptanos o separar impurezas ácidas. Compuesta fundamentalmente de hidrocarburos con un número de carbonos en su mayor parte dentro del intervalo de  $C_4$  a  $C_{12}$  y con un intervalo de ebullición aproximado de 20 °C a 130 °C]
- DA naphtha (råolie), sweetenet let, Lavtkogende uspecifiseret nafta  
En sammensat blanding af carbonhydrider opnået ved at underkaste en råolienaphtha en sweetening-proces, for at omdanne mercaptaner eller for at fjerne sure urenheder. Den består overvejende af carbonhydrider, overvejende  $C_4$  til og med  $C_{12}$ , med koginterval omtrænt fra 20 °C til 130 °C]
- DE Naphtha (Erdöl), gesußt leicht, Naphtha, niedrig siedend, nicht spezifiziert  
[Komplexe Kombination von Kohlenwasserstoffen, die man erhält, wenn man eine Erdöl-Naphtha einem Süßungsverfahren zur Konvertierung von Mercaptanen oder zum Entfernen saurer Verunreinigungen aussetzt. Besteht vorherrschend aus Kohlenwasserstoffen mit Kohlenstoffzahlen vorherrschend im Bereich von  $C_4$  bis  $C_{12}$  und siedet im Bereich von etwa 20 °C bis 130 °C]
- EL ναφθα (πετρέλαιου), ηλυκασμένη ελαφρά. Ελαφρά ναφθα — ηη προδιαγεγραμμένη  
[Πολυπλοκός συνδυασμός υδρογονανθράκων που λαμβάνεται με ηλυκανση νάφθας πετρελαίου για να μετατραπούν μερκαπτανες η να απομακρυνθούν οξίνες προσμίξεις. Συνίσταται κυρίως από υδρογονανθράκες με αριθμό ατόμων άνθρακα κυρίως στην περιοχή από  $C_4$  ως και  $C_{12}$  και με περιοχή βρασμού από 20 °C ως 130 °C περίπου]
- EN Naphtha (petroleum), sweetened light, Low boiling point naphtha — unspecified  
[A complex combination of hydrocarbons obtained by subjecting a petroleum naphtha to a sweetening process to convert mercaptans or to remove acidic impurities. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of  $C_4$  through  $C_{12}$  and boiling in the range of approximately 20 °C to 130 °C (68 °F to 266 °F)]
- FR naphtha léger adouci (pétrole), Naphtha a point d'ébullition bas — non spécifique  
[Combinaison complexe d'hydrocarbures obtenue en soumettant un naphtha pétrolier a un procédé d'adoucissement afin de convertir les mercaptans ou d'éliminer les impuretés acides. Se compose principalement d'hydrocarbures dont le nombre de carbones se situe en majorité dans la gamme  $C_4$ ,  $C_{12}$  et dont le point d'ébullition est compris approximativement entre 20 °C et 130 °C]
- IT nafta (petrolio), leggera addolcita, Nafta con basso punto di ebollizione — non specificata  
[Combinazione complessa di idrocarburi ottenuta sottoponendo una nafta di petrolio ad un processo di addolcimento per convertire i mercaptani o eliminare impurezze acide. È costituita prevalentemente da idrocarburi con numero di atomi di carbonio prevalentemente nell'intervallo  $C_4$ ,  $C_{12}$  e punto di ebollizione nell'intervallo 20 °C-130 °C ca.]
- NL nafta (aardolie), stankvrij gemaakte lichte, Nafta met laag kookpunt — niet gespecificeerd  
[Een complexe verzameling koolwaterstoffen die wordt verkregen door het onderwerpen van een aardolienafta aan een stankverwijderingsproces waarbij mercaptanen worden omgezet of zure onzuiverheden worden verwijderd. Bestaat voornamelijk uit koolwaterstoffen, overwegend  $C_4$  tot en met  $C_{12}$ , met een kooktraject van ongeveer 20 °C tot 130 °C]
- PT nafta (petróleo), leve tratada (sweetened), Nafta de baixo ponto de ebulição — não especificada  
[Uma combinação complexa de hidrocarbonetos obtida submetendo uma nafta petrolífera a um processo de sweetening para converter mercaptanos ou para remover impurezas ácidas. É constituída predominantemente por hidrocarbonetos com números de átomos de carbono predominantemente na gama de  $C_4$  até  $C_{12}$  e destila no intervalo de aproximadamente 20 °C a 130 °C]

- ES residuos (petroleo), fraccion ligera craqueada a vapor, aromaticos , Nafta de baja temperatura de inflamación, sin especificar  
[Combinacion compleja de hidrocarburos obtenida por la destilacion de los productos de craqueo a vapor o procesos similares despues de la separacion de productos muy ligeros teniendo como resultado un residuo que comienza con hidrocarburos con un numero de carbonos superior a  $C_4$ . Compuesta en su mayor parte de hidrocarburos aromaticos con un numero de carbonos superior a  $C_4$  y con un punto de ebullición aproximado por encima de  $40^\circ\text{C}$ ]
- DA rester (råolie), dampkrakkede lette, aromatiske , Lavtkogende uspecifiseret nafta  
[En sammensat blanding af carbonhydrider opnået ved destillationen af produkterne fra dampkrakning eller lignende processer efter fjernelse af de meget lette produkter, resulterende i en rest begyndende med carbonhydrider med carbonantal større end  $C_4$ . Den består overvejende af aromatiske carbonhydrider, større end  $C_4$ , og koger omtrent over  $40^\circ\text{C}$ ]
- DE Rückstände (Erdöl), dampfgekrackte leichte, aromatisch , Naphtha, niedrig siedend, nicht spezifiziert  
[Komplexe Kombination von Kohlenwasserstoffen, die man durch Destillation der Produkte aus Dampfkrack- oder ähnlichen Verfahren nach Abnahme der sehr leichten Produkte erhält und einen Rückstand mit Kohlenwasserstoffen ergibt, dessen Kohlenstoffzahlen bei größer als  $C_4$  beginnen. Besteht vorherrschend aus aromatischen Kohlenwasserstoffen mit Kohlenstoffzahlen größer als  $C_4$  und siedet über etwa  $40^\circ\text{C}$ ]
- EL υπολείμματα (πετρελαιο), ελαφρα ατμοπυρολυμενα αρωματικά Ελαφρα ναφθα — μη προδιαγεγραμμένη  
[Ποικιλομορφός συνδυασμός υδρογονανθράκων που λαμβάνεται με την αποστάξη των προϊόντων ατμοπυρόλυσης ή παρόμοιων κατεργασιών, μετά την απομάκρυνση των πολύ ελαφρών προϊόντων, ώστε να προκύπτει υπολείμμα το οποίο αρχίζει με υδρογονανθράκες με αριθμό ατόμων άνθρακα μεγαλύτερο από  $C_4$ . Συνίσταται κυρίως από αρωματικούς υδρογονάνθρακες με αριθμό ατόμων άνθρακα μεγαλύτερο από  $C_4$  και βράζει πάνω από  $40^\circ\text{C}$  περίπου]
- EN Residues (petroleum), steam-cracked light, arom , Low boiling point naphtha — unspecified  
[A complex combination of hydrocarbons obtained by the distillation of the products of steam cracking or similar processes after taking off the very light products resulting in a residue starting with hydrocarbons having carbon numbers greater than  $C_4$ . It consists predominantly of aromatic hydrocarbons having carbon numbers greater than  $C_4$  and boiling above approximately  $40^\circ\text{C}$  ( $104^\circ\text{F}$ )]
- FR résidus légers de vapocraquage (pétrole), aromatiques , Naphta a point d'ébullition bas — non spécifié  
[Combinaison complexe d'hydrocarbures obtenue par distillation des produits résultant d'un vapocraquage ou de traitements similaires après élimination des produits très légers, produisant un résidu composé d'hydrocarbures dont le nombre de carbones est supérieur à  $C_4$ . Se compose principalement d'hydrocarbures aromatiques dont le nombre de carbones est supérieur à  $C_4$ , et dont le point d'ébullition est approximativement supérieur à  $40^\circ\text{C}$ ]
- IT residui (petrolio), leggeri da cracking con vapore, aromatici , Nafta con basso punto di ebollizione — non specificata  
[Combinazione complessa di idrocarburi ottenuta per distillazione dei prodotti del cracking con vapore o processi simili dopo aver eliminato i prodotti molto leggeri, risultante in un residuo che inizia con idrocarburi con numero di atomi di carbonio superiore a  $C_4$ . È costituita prevalentemente da idrocarburi aromatici con numero di atomi di carbonio maggiore di  $C_4$ , e punto di ebollizione superiore a  $40^\circ\text{C}$ ]
- NL residuen (aardolie), stoomgekraakte lichte, aromatisch , Nafta met laag kookpunt — niet gespecificeerd  
[Een complexe verzameling koolwaterstoffen die wordt verkregen door de destillatie van de producten van stoomkraken of vergelijkbare processen, na verwijdering van de zeer lichte producten, resulterend in een residu dat begint met koolwaterstoffen groter dan  $C_4$ . Bestaat voornamelijk uit aromatische koolwaterstoffen, overwegend groter dan  $C_4$ , kokend boven ongeveer  $40^\circ\text{C}$ ]
- PT resíduos (petróleo), leves do steam-cracking, aromaticos , Nafta de baixo ponto de ebulição — não especificada  
[Uma combinação complexa de hidrocarbonetos obtida pela destilação dos produtos do steam-cracking ou processos semelhantes após remoção dos produtos muito leves de que resulta um residuo constituído por hidrocarbonetos com numeros de atomos de carbono superiores a  $C_4$ , e destila acima de aproximadamente  $40^\circ\text{C}$ ]

## NOTA H

Kerosina (petroleum): Queroseno de destilación directa

Combinación compleja de hidrocarburos producida por la destilación del petróleo crudo. Compuesta de hidrocarburos con un número de carbonos en su mayor parte dentro del intervalo de  $C_{10}$  a  $C_{25}$ , y con un intervalo de ebullición aproximado de 150 °C a 290 °C.

K petroleum (raffine): Straight run petroleum

En sammensat blanding af carbonhydrider fremstillet ved destillation af råolie. Den består af carbonhydrider, overvejende  $C_{10}$  til og med  $C_{25}$  med kogefterval omfrent fra 150 °C til 290 °C.

Kerosin (Erdöl): Straight-run-Kerosin

Komplexe Kombination von Kohlenwasserstoffen, hergestellt durch Destillation von Rohöl. Besteht aus Kohlenwasserstoffen mit Kohlenstoffzahlen vorherrschend im Bereich von  $C_{10}$  bis  $C_{25}$ , und siedet im Bereich von etwa 150 °C bis 290 °C.

Κηροζίνη (πετρέλαιο): Κηροζίνη από ατμοσφαιρική αποστάξη

Πολύπλοκη σε σύσταση οργανική ουσία που παράγεται με την αποστάξη αργού πετρελαίου. Αποτελείται από οργανοκινητρικά με αριθμό ατόμων άνθρακα κυρίως στην περιοχή από  $C_{10}$  ως και  $C_{25}$  και δράζει στην περιοχή από 150 °C ως 290 °C περίπου.

Kerosine (petroleum): Straight run kerosine

A complex combination of hydrocarbons produced by the distillation of crude oil. It consists of hydrocarbons having carbon numbers predominantly in the range of  $C_{10}$  through  $C_{25}$  and boiling in the range of approximately 150 °C to 290 °C (320 °F to 554 °F).

Kerosene (petroleu): Kerosene de distillation directe

Combinaison complexe d'hydrocarbures obtenue par distillation du pétrole brut. Se compose d'hydrocarbures dont le nombre de carbones se situe principalement dans la gamme  $C_{10}$ - $C_{25}$  et dont le point d'ébullition est compris approximativement entre 150 °C et 290 °C.

Kerosene (petrolio): Kerosene di prima distillazione

Combinazione complessa di idrocarburi prodotta per distillazione del grezzo. È costituita da idrocarburi con numero di atomi di carbonio prevalentemente nell'intervallo  $C_{10}$ - $C_{25}$  con punto di ebollizione nell'intervallo 150 °C-290 °C ca.]

kerosine (aardolie): Gedestilleerde kerosine

En complexe verzameling van koolwaterstoffen, geproduceerd door de destillatie van ruwe olie. Het bestaat uit koolwaterstoffen, verwegend in de reeks van  $C_{10}$  tot en met  $C_{25}$ , met een kooktraject van ongeveer 150 °C tot 290 °C.

Kerosene (petroleu): Queroseno de destilação directa

Uma combinação complexa de hidrocarbonetos produzida pela destilação de petróleo bruto. É constituída por hidrocarbonetos em número de átomos de carbono predominantemente na gama de  $C_{10}$  até  $C_{25}$  e destila no intervalo de aproximadamente 150 °C a 290 °C.

## NOTA H

- **nafta disolvente (petróleo), fracción alifática intermedia ; Queroseno de destilación directa**  
Combinación compleja de hidrocarburos obtenida de la destilación de petróleo crudo o de gasolina natural. Compuesta principalmente de hidrocarburos saturados con un número de carbonos en su mayor parte dentro del intervalo de  $C_6$  a  $C_{12}$  y con un intervalo de ebullición aproximado de 140 °C a 220 °C ]
- **solventnaphtha (råolie), middeltung aliphatisk , Straight run petroleum**  
En sammensat blanding af carbonhydinder opnået ved destillation af råolie eller naturgaskondensat. Den består overvejende af mættede carbonhydinder, overvejende  $C_6$  til og med  $C_{12}$ , med kogesinterval omtrent fra 140 °C til 220 °C.]
- **Lösungsmittelnaphtha (Erdöl), mittlere aliphatische ; Straight-run-Kerosin**  
Komplexe Kombination von Kohlenwasserstoffen, erhalten aus der Destillation von Rohöl oder natürlichem Benzin. Besteht vorherrschend aus gesättigten Kohlenwasserstoffen mit Kohlenstoffzahlen vorherrschend im Bereich von  $C_6$  bis  $C_{12}$  und siedet im Bereich von etwa 140 °C bis 220 °C ]
- **διαλύτης ναφθα (πετρελαίου), μεσαία αλειφατική- Κεροξίνη από ατμοσφαιρική**  
Πολύπλοκος συνδυασμός υδρογονανθράκων που λαμβάνεται από την απόσταξη αργού πετρελαίου ή φυσικής βενζίνης. Συνίσταται κυρίως από κορεσμένους υδρογονανθράκες με αριθμό ατόμων άνθρακα κυρίως στην περιοχή από  $C_6$  ως και  $C_{12}$  και βράζει στην περιοχή από 140 °C ως 220 °C περίπου.]
- **Solvent naphtha.(petroleum), medium aliph. ; Straight run kerosine**  
A complex combination of hydrocarbons obtained from the distillation of crude oil or natural gasoline. It consists predominantly of saturated hydrocarbons having carbon numbers predominantly in the range of  $C_6$  through  $C_{12}$  and boiling in the range of approximately 140 °C to 220 °C (284 °F to 428 °F).]
- **solvant naphtha aliphatique moyen (pétrole) ; Kérosène de distillation directe**  
[Combinaison complexe d'hydrocarbures obtenue par distillation de pétrole brut ou d'essence naturelle. Se compose principalement d'hydrocarbures saturés dont le nombre de carbones se situe en majorité dans la gamme  $C_6$ - $C_{12}$  et dont le point d'ébullition est compris approximativement entre 140 °C et 220 °C ]
- **nafta solvente (petrolio), alifatica intermedia ; Cherosene di prima distillazione**  
Combinazione complessa di idrocarburi ottenuta dalla distillazione del petrolio grezzo o della benzina naturale. È costituita prevalentemente da idrocarburi saturi con numero di atomi di carbonio prevalentemente nell'intervallo  $C_6$ - $C_{12}$  e punto di ebollizione nell'intervallo 140 °C-220 °C ca.]
- **solvent-nafta (aardolie), middenfractie alifatisch , Gedestilleerde kerosine**  
Een complexe verzameling koolwaterstoffen, verkregen uit de destillatie van ruwe olie of gasbenzine. Bestaat voornamelijk uit verzadigde koolwaterstoffen, overwegend  $C_6$  tot en met  $C_{12}$ , met een kooktraject van ongeveer 140 °C tot 220 °C ]
- **nafta de petróleo (petróleo), alifática media , Queroseno de destilação directa**  
Uma combinação complexa de hidrocarbonetos obtida da destilação de petróleo bruto ou de gasolina natural. É constituída predominantemente por hidrocarbonetos saturados com números de átomos de carbono predominantemente na gama de  $C_6$  ate  $C_{12}$  e destila no intervalo de aproximadamente 140 °C a 220 °C ]

- FR** distillats (pétrole), vapocraquage; Kérosène de craquage  
[Combinaison complexe d'hydrocarbures obtenue par distillation des produits résultant d'un vapocraquage. Se compose principalement d'hydrocarbures insaturés dont le nombre de carbones se situe en majorité dans la gamme  $C_7$ - $C_{16}$  et dont le point d'ébullition est compris approximativement entre 90 °C et 290 °C.]
- IT** distillati (petrolio), crackizzati con vapor d'acqua, Cherosene da cracking  
[Combinazione complessa di idrocarburi ottenuto distillando i prodotti provenienti da un processo di cracking con vapor d'acqua. È prevalentemente costituita da idrocarburi insaturi con numero di atomi di carbonio prevalentemente nell'intervallo  $C_7$ - $C_{16}$  e punto di ebollizione nell'intervallo 90 °C-290 °C ca.]
- NL** destillaten (aardolie), stoomgekraakt; Gekraakte kerosine  
[Een complexe verzameling koolwaterstoffen, verkregen door de destillatie van de produkten uit een stoomkraakproces. Bestaat voornamelijk uit onverzadigde koolwaterstoffen, overwegend  $C_7$  tot en met  $C_{16}$ , met een kooktraject van ongeveer 90 °C tot 290 °C.]
- PT** destilados (petróleo), do steam-cracking; Queroseno de « cracking »
